Consumer prices and price indexes

January-March 1987

Prix à la consommation et indices des prix

Janvier-mars 1987

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9606) or to the Statistics Canada reference centre in:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (983-4020)
Montréal (283-5725)	Regina (780-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (973-6586)	Vancouver (666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1-800-667-7164
Alberta	1-800-222-6400
British Columbia (South and Central)	1-800-663-1551
Yukon and Northern B.C. (area served by NorthwTel Inc.)	Zenith 0-8913

Northwest Territories (area served by NorthwTel Inc.)	Call collect 403-420-2011

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9606) ou au centre de consultation de Statistique Canada à:

St. John's (772-4073)	Sturgeon Falls (753-4888)
Halifax (426-5331)	Winnipeg (983-4020)
Montréal (283-5725)	Regina (780-5405)
Ottawa (990-8116)	Edmonton (420-3027)
Toronto (973-6586)	Vancouver (666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Terre-Neuve et Labrador	1-800-563-4255
Nouvelle-Écosse, Nouveau-Brunswick et Île-du-Prince-Édouard	1-800-565-7192

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 990-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Tony Nabata**, Acting Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 990-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

The Highlights section provides a brief analysis of price movements for the current quarter. As well, the special feature is summarized in this section.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. The special feature is presented in part V of the publication.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La section portant sur les points saillants présente une brève analyse des mouvements de prix du trimestre courant. De plus, l'article vedette est résumé dans cette section.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. L'article vedette se retrouve à la partie V de cette publication.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

HIGHLIGHTS

Consumer Price Behaviour

First Quarter, 1987

Trends in the All-items Index

In seasonally adjusted terms, the monthly rates of change for the All-items Consumer Price Index (CPI) for Canada were noticeably lower over the first quarter of 1987 than over the fourth quarter of 1986. During this period, the monthly seasonally adjusted index rose 0.2% in January, 0.3% in February, and 0.4% in March while the monthly rates for October, November and December of 1986 were 0.4%, 0.6% and 0.4% respectively.

The declining trend was also supported by the unadjusted rate of change for the CPI which posted a 1.1% increase between December and March compared to a rise of 1.2% in the fourth quarter of 1986. In addition, the average of the year-to-year increases in January, February and March (4.0%) was less than the average of the 12-month increases in October to December (4.4%). The above data all support an overall declining trend for the change in the All-items CPI from the last quarter of 1986 to the first quarter of 1987.

Major Contributors to the First Quarter Change

Between December 1986 and March 1987, the CPI rose by 1.1% (not seasonally adjusted) compared to a gain of 1.2% in the fourth quarter of 1986. The Housing and Food indexes, which both rose 1.0% over the quarter, contributed over 50% of the overall upward movement. The other five major components posted gains ranging from 0.8% for Transportation to 1.9% for Clothing.

Two of the three major components of the Housing index rose over the quarter (Shelter, 1.2% and Household Furnishings, Equipment and Related Services, 0.8%). The Household Operation index remained unchanged as various small price increases were offset by a 5.8% decline in long distance telephone rates. The Shelter index provided the major contribution to the quarterly increase, as increases in the cost of new housing (3.7%), homeowners' insurance (4.0%), fuel oil (10.2%), rent (0.7%) and electricity (2.3%) were partly offset by declines in rates for natural gas (-0.9%) and water (-1.3%). Although the price of fuel oil has risen steadily for the past five months, the index was still 30% below peak 1986 levels.

POINTS SAILLANTS

Comportement des Prix à la Consommation

Premier trimestre, 1987

Tendances de l'indice d'ensemble

Par rapport au quatrième trimestre de 1986, les taux mensuels de variation de l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) pour le Canada ont été nettement plus faibles au premier trimestre de 1987. Au cours de cette période, l'indice mensuel désaisonnalisé a augmenté de 0.2% en janvier, de 0.3% en février et de 0.4% en mars, contre des taux d'augmentation mensuels de 0.4%, 0.6% et 0.4% respectivement en octobre, novembre et décembre 1986.

La tendance au ralentissement est également mise en évidence par le taux d'augmentation de l'IPC non désaisonnalisé, qui a été de 1.1% entre décembre et mars comparativement à 1.2% au quatrième trimestre de 1986. En outre, la moyenne des augmentations d'une année à l'autre en janvier, février et mars (4.0%) est moindre que la moyenne des augmentations sur 12 mois d'octobre à décembre (4.4%). Toutes ces données témoignent d'une tendance générale au ralentissement du taux de variation de l'IPC d'ensemble entre le dernier trimestre de 1986 et le premier trimestre de 1987.

Principaux facteurs du changement au premier trimestre

Entre décembre 1986 et mars 1987, l'IPC a grimpé de 1.1% (avant désaisonnalisation). Au quatrième trimestre de 1986, le gain avait été de 1.2%. L'indice de l'habitation et celui des aliments ont tous deux augmenté de 1.0% au cours du trimestre et sont responsables de plus de la moitié de la hausse globale. Les cinq autres composantes principales ont inscrit des gains compris entre 0.8% pour les transports et 1.9% pour l'habillement.

Deux des trois composantes principales de l'indice de l'habitation ont progressé au cours du trimestre (soit le logement, en hausse de 1.2%, et les articles d'ameublement, l'équipement ménager et les services connexes, en hausse de 0.8%). L'indice des dépenses de ménage demeure inchangé, plusieurs petites augmentations ayant été effacées par le recul de 5.8% des frais d'appels interurbains. L'indice du logement est celui qui a le plus contribué à l'augmentation trimestrielle, l'accroissement des prix des logements neufs (3.7%), des primes d'assurance à la charge du propriétaire (4.0%), des prix du mazout (10.2%), du loyer (0.7%) et des tarifs de l'électricité (2.3%) ayant été compensé en partie seulement par la baisse des tarifs du gaz naturel (-0.9%) et de la taxe d'eau (-1.3%). Même si les prix du mazout n'ont cessé de grimper depuis les cinq derniers mois, l'indice était encore 30% plus bas que les sommets de 1986.

The 1.0% increase in the Food index was attributable to gains posted by the indexes for both Food Purchased from Stores (1.0%) and Food Purchased from Restaurants (1.1%). The majority of the rise in the former index was due to increases in the prices of fresh vegetables (7.8%), fresh fruit (5.1%), bakery products (1.6%) and fish (2.1%). The overall upward movement in the Food index was partially dampened by price decreases for meat products (-3.3%) and coffee (-3.9%).

Within the fresh vegetable group, larger than average price increases were observed for cucumbers (95.8%), onions (30.2%) and cabbage (13.3%). The price of tomatoes on the other hand fell 19.8% during the quarter. The rise in the fresh fruit index was led by price gains of 17.9% for bananas and 10.2% for apples.

Meat prices declined during the quarter due to generally lower wholesale prices, principally the result of high supplies of pork and poultry. In order to remain competitive, beef prices also declined during the quarter in spite of reduced supplies of slaughter cattle.

The 1.9% quarterly gain in the Clothing index was due to increases in all its component indexes. The 1.8% increase in the price of women's wear provided the strongest contribution to the latest quarterly rise.

With a 1.0% increase in the Private Transportation component offset partially by a 0.2% decline in the Public Transportation component, the Transportation index recorded a 0.8% increase during the quarter. Most of this gain was due to an 8.0% increase in the price of gasoline. A 3.8% drop in the cost of new automobiles (primarily the combination of cash rebate programs and major extensions in new car warranties) provided the major moderating influence on the overall upward movement.

The 1.3% increase in the Recreation, Reading and Education index also made a moderate contribution to the first quarter rise of the All-items index. The latest increase resulted from gains in all three component indexes, Recreation (1.3%), Reading (2.0%), and Education (0.6%). Notable price increases included travel tours, sporting equipment, admission charges for motion picture showings, and magazines and periodicals.

The Tobacco Products and Alcoholic Beverages index climbed by 1.4% in the first quarter with both tobacco products (1.8%) and alcoholic beverages (1.1) contributing

L'augmentation de 1.0% de l'indice des aliments est attribuable aux gains affichés par les indices des aliments achetés au restaurant (1.1%) et des aliments achetés au magasin (1.0%). La montée de ce dernier indice est dû surtout au relèvement des prix des légumes frais (7.8%), des fruits frais (5.1%), des produits de boulangerie (1.6%) et du poisson (2.1%). Le mouvement global à la hausse de l'indice des aliments a été freiné par la diminution des prix des viandes (-3.3%) et du café (-3.9%).

S'agissant des légumes frais, des majorations supérieures à la moyenne ont été observées pour les concombres (95.8%), les oignons (30.2%) et le chou (13.3%). Par contre, les prix des tomates ont chuté de 19.8% au cours du trimestre. La montée de l'indice des fruits frais est due surtout au renchérissement de 17.9% des bananes et de 10.2% des pommes.

Les prix de la viande ont fléchi au cours du trimestre, le haut niveau des stocks de porc et de volaille ayant fait baisser les prix de gros en général. Les lois de la concurrence ont également fait baisser les prix du boeuf au cours du trimestre, en dépit d'une réduction du parc de bovins d'abattage.

L'avance de 1.9% de l'indice de l'habillement au cours du trimestre est due aux augmentations des indices de toutes ses composantes. Le relèvement de 1.8% des prix des vêtements pour femmes a le plus contribué à la dernière progression trimestrielle.

L'indice des transports a augmenté de 0.8% durant le trimestre, sa composante du transport privé ayant avancé de 1.0% et celle du transport public ayant reculé de 0.2%. Le gain trimestriel est dû surtout à l'augmentation de 8.0% des prix de l'essence. La chute de 3.8% des prix des voitures neuves (due aux programmes de remises au comptant et aux prolongements importants des garanties sur les véhicules neufs) a exercé l'effet modérateur le plus important.

L'augmentation de 1.3% de l'indice des loisirs, de la lecture et de la formation a également contribué quelque peu à la montée de l'indice d'ensemble au premier trimestre. Cette dernière augmentation s'explique par les gains des indices des trois composantes principales, soit les loisirs (1.3%), la lecture (2.0%) et la formation (0.6%). Des hausses notables ont été observées dans le cas des prix des voyages organisés et des articles de sport, des droits d'entrée aux cinémas et des prix des revues et des périodiques.

L'indice des produits du tabac et des boissons alcoolisées a grimpé de 1.4% au premier trimestre, les produits du tabac et les boissons alcoolisées ayant contribué au mouvement à la

to the upward movement. Increases of 1.5% for Personal Care and 1.2% for Health Care accounted for the 1.4% rise posted in the first quarter by the Health and Personal Care index.

hausse avec des augmentations de 1.8% et de 1.1% respectivement. La majoration de 1.5% des soins personnels et de 1.2% des soins de santé ont été responsables de la montée de 1.4% de l'indice de la santé et des soins personnels au premier trimestre.

Special Feature Summary

As expected, the Low-Income CPI and the Low-Income Senior-Citizens CPI showed movements in 1986 that were very similar to those of the Official CPI. For example, the change between December 1985 and December 1986 was 4.5% for the Low-Income CPI, 4.7% for the Low-Income Senior-Citizens CPI, and 4.2% for the Official CPI. This and other information is contained in the article on pages 109 to 114 entitled "Monitoring of CPIs for Special Groups (1986 data)".

Résumé de l'article vedette

Comme on pouvait s'y attendre, l'IPC des ménages à faible revenu et l'IPC des personnes âgées à faible revenu ont affiché en 1986 des mouvements très proches de ceux de l'IPC officiel. Par exemple, la variation entre décembre 1985 et décembre 1986 de l'IPC des ménages à faibles revenus a été de 4.5%, contre 4.7% pour l'IPC des personnes âgées à faible revenu et 4.2% pour l'IPC officiel. Ces renseignements et d'autres se retrouvent aux pages 109 à 114 dans l'article intitulé "Suivi des IPC pour les groupes particuliers (données de 1986)".

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

(1) For explanatory notes and detailed item specification see Appendix 4.

(2) Blanks appear on this table where the quality and (or) quantity of the prices were insufficient to produce a good average.

(3) Whitehorse is not included in weighted city averages.

(4) Tenderloin removed priced in Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Whitehorse.

(5) Chicoutimi (450 g).

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

ARTICLE VEDETTE

MONITORING OF CPIs FOR SPECIAL GROUPS (1986 DATA)

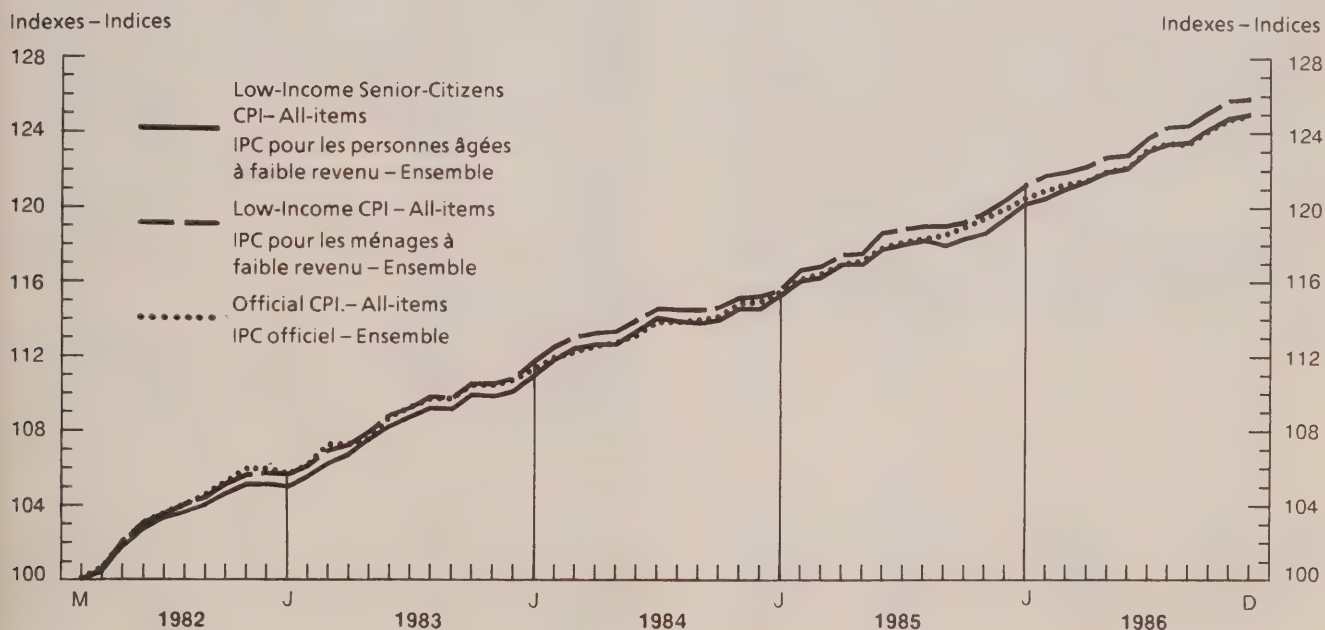

This article in the January-March 1987 issue of Consumer Prices and Price Indexes represents a change in the recent practice of Prices Division to release, annually, a considerable amount of analytical information and tabular data relating to CPIs for sub-groups of the population covered by the Official CPI. Last year, in what could be referred to as a reference paper on the subject of special-group indexes, the CPI for Low-Income Senior Citizens was released. This year, as planned, the two special-group indexes were monitored, and only some information necessary to update them is being published. This is because Statistics Canada has shown, on many occasions, that, both theoretically and empirically, sub-group indexes do not differ substantially from the All-items index for the Official CPI. Accordingly, this article shows empirically that the two special-group indexes continue to move similarly to the CPI, although there are important differences at lower levels of aggregation.

SUIVI DES IPC POUR LES GROUPES PARTICULIERS (DONNÉES DE 1986)

Le présent supplément au numéro de janvier-mars 1987 de Prix à la consommation et indices des prix représente une dérogation à la pratique récente de la Division des prix de publier, une fois par année, un grand nombre de données analytiques et de tableaux ayant trait à des IPC pour des sous-ensembles de la population visée par l'IPC officiel. L'année dernière, un IPC pour les personnes âgées à faible revenu était publié dans ce qu'il convient d'appeler un document de référence sur les indices pour des groupes particuliers. Cette année, on a, comme prévu, suivi l'évolution des deux indices pour des groupes particuliers et on ne publie que les renseignements nécessaires à leur mise à jour. Statistique Canada en a décidé ainsi après avoir maintes fois démontré, tant théoriquement qu'empiriquement, que les indices pour des sous-ensembles ne diffèrent pas notablement de l'IPC officiel d'ensemble. En conséquence, le présent article démontre empiriquement que les deux indices pour des groupes particuliers continuent d'afficher des mouvements analogues à celui de l'IPC bien qu'il existe des différences importantes aux niveaux d'agrégation inférieurs.

Comparison of the Low-Income Senior-Citizens CPI, Low-Income CPI, and the Official CPI, for Canada (March 1982 = 100)

Comparaison de l'IPC, pour les personnes âgées à faible revenu, l'IPC pour les ménages à faible revenu, et l'IPC officiel, pour le Canada (mars 1982 = 100)

As expected, the 1986 data (contained in Text Table I) for both the Low-Income Senior Citizens CPI and the Low-Income CPI, showed only minor differences compared to the Official CPI and all exhibited a similar trend. This is consistent with the findings of previous analyses of sub-group indexes.

Comme on s'y attendait, les données de 1986 (présentées dans le tableau explicatif I) ne font apparaître que des différences mineures par rapport à l'IPC officiel, qu'il s'agisse de l'IPC pour les personnes âgées à faible revenu ou de l'IPC pour les ménages à faible revenu. Ils ont tous affiché une tendance semblable, ce qui concorde avec les conclusions des analyses précédentes sur les indices des sous-groupes.

From March 1982 (the base period of the Low-Income Senior-Citizens CPI) to December 1986, the Official CPI increased by 24.9%, compared to 25.0% for the Low-Income Senior-Citizens CPI, and 25.8% for the Low-Income CPI. For each of the months of 1986, the All-items indexes for the Low-Income CPI were higher than the Official CPI, whereas the Low-Income Senior-Citizens indexes were only slightly higher, from September onwards.

In comparing the December 1986 (the most recent period available) special-group indexes to the Official CPI for the seven major components, one of the components was lower than the Official CPI, five were higher, and one showed mixed results. Food, for both the Low-Income Senior-Citizens CPI and the Low-Income CPI, was lower than the Official CPI.

For five of the major components - Housing, Clothing, Transportation, Health and Personal Care, and Tobacco Products and Alcoholic Beverages - the special-group indexes were higher than the Official CPI in December 1986. For Housing, the Low-Income Senior Citizens CPI was 0.7% higher than the CPI, and the Low-Income CPI, 0.8% higher. For Clothing, the Low-Income Senior-Citizens CPI was 1.4% higher than the Official CPI, and the Low-Income CPI, 0.4% higher. For Transportation, the Low-Income Senior-Citizens CPI and the Low-Income CPI were higher than the Official CPI, by 2.5%, and 0.1%, respectively. For Health and Personal Care, the Low-Income Senior-Citizens CPI was higher by 0.4%, and the Low-Income CPI, by 0.6%. For Tobacco Products and Alcoholic Beverages, however, the differences were larger (the largest of any of the seven major components), at 3.8% higher for the Low-Income Senior-Citizens CPI, and 6.0% for the Low-Income CPI.

For the other major component - Recreation, Reading and Education - the Low-Income Senior-Citizens index was lower by 1.7%, compared to the Official CPI, but the Low-Income index was higher by 1.4%.

Further information about methodological considerations, as well as analyses and weights, can be obtained from the previous year's supplement, or by contacting the Development and Analysis Unit of Prices Division, at (613)-993-4777.

De mars 1982 (période de base de l'IPC pour les personnes âgées à faible revenu) à décembre 1986, l'IPC officiel a augmenté de 24.9%, alors que l'IPC pour les personnes âgées à faible revenu progressait de 25.0% et l'IPC pour les ménages à faible revenu, de 25.8%. Pour chacun des mois de 1986, les indices d'ensemble de l'IPC pour les ménages à faible revenu ont dépassé l'IPC officiel, et les indices d'ensemble de l'IPC pour les personnes âgées à faible revenu se sont maintenus légèrement au-dessus de l'IPC officiel à partir de septembre.

Si on compare les deux indices des groupes particuliers pour décembre 1986 (les derniers en date) à l'IPC officiel, on constate qu'ils sont inférieurs à l'IPC officiel pour l'une des sept composantes, qu'ils sont supérieurs pour cinq et que l'un est inférieur, l'autre supérieur, pour la dernière composante. Par rapport à l'IPC officiel, la composante des aliments est moins élevée dans l'IPC pour les personnes âgées à faible revenu de même que dans l'IPC pour les ménages à faible revenu.

En décembre 1986, les indices des groupes particuliers surpassaient l'IPC officiel pour cinq composantes sur sept (habitation, habillement, transports, santé et soins personnels et produits du tabac et boissons alcoolisées). Dans le cas de l'habitation, l'IPC pour les personnes âgées à faible revenu et l'IPC pour les ménages à faible revenu dépassaient l'IPC officiel de 0.7% et de 0.8% respectivement. Au chapitre de l'habillement, l'IPC des personnes âgées à faible revenu dépassait de 1.4% l'IPC officiel, et l'IPC des ménages à faible revenu excédait de 0.4% l'IPC officiel. Quant aux transports, les deux indices pour des groupes particuliers étaient également plus élevés que l'IPC officiel, de 2.5% dans le cas de l'IPC pour les personnes âgées à faible revenu et de 0.1% dans le cas de l'IPC pour les ménages à faible revenu. En ce qui concerne la santé et les soins personnels, l'écart était de 0.4% en faveur de l'IPC pour les personnes âgées à faible revenu et de 0.6% en faveur de l'IPC pour les ménages à faible revenu. Toutefois, dans le cas des produits du tabac et des boissons alcoolisées, les écarts étaient plus marqués (les plus marqués des sept composantes), soit 3.8% de plus pour l'IPC des personnes âgées à faible revenu, et 6.0% de plus pour l'IPC des ménages à faible revenu.

Pour l'autre composante principale, soit les loisirs, la lecture et la formation, l'indice pour les personnes âgées à faible revenu était de 1.7% inférieur à l'IPC officiel tandis que l'IPC pour les ménages à faible revenu excédait ce même indice de 1.4%.

D'autres renseignements portant sur des considérations d'ordre méthodologique ainsi que des analyses et des coefficients de pondération peuvent être obtenus en consultant le supplément de l'année dernière ou en communiquant avec la Sous-section du développement et de l'analyse de la Division des prix, au numéro (613)-993-4777.

(1) Use of this factor as a multiplier will yield 1981=100 indexes, for those users who require them on this time base.

(1) Les utilisateurs qui ont besoin d'indices sur la base 1981=100 pourront les obtenir en utilisant ce facteur comme multiplicateur.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation	8.61	8.25
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.39	5.45

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 990-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982. This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 990-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982. Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaîne-

linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every ten years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 2 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note

ment ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les dix ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 2 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le

on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures**, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure

taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n^o 62-005 au catalogue), vol. 4, n^o 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, n^o 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la

patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: **Family Food Expenditure, 1982**, Catalogue 62-554; and **Family Expenditure in Canada, 1982**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and eighteen cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-990-9606 or 613-990-9607).

base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: **Dépenses alimentaires des familles au Canada, 1982**, n° 62-554 au catalogue; et **Dépenses des familles au Canada, 1982**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de dix-huit villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-990-9606 ou 613-990-9607).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents $\times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 3) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents}$). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 3) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the subject.(1) Rather than reiterating those

(1) Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

LA DÉSÉASONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question(1). Au lieu d'en reprendre ici le contenu, nous

(1) L'étude technique n° 12 de Julius Shiskin et de Harry Eisenpress "Seasonal Adjustments by Electronic Computer Methods", National Bureau of Economic Research, New York, 1958.

texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. La durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à

is proportionate to the number of price quotes obtained for each of the brands in that city.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

City Average Retail Prices - Item Specifications

Detailed Specification

Beef

Round steak. Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

Prime rib roast. Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

Prix de Détail Moyens par Ville - Spécifications des Articles

Spécification détaillée

Boeuf

Bifteck dans la ronde. Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

Rôti de côtes de choix. Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Rôti de palette (non désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

Boeuf haché régulier. Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 450 g.

Poultry

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

Fish

Cod fillets. Generally available manufacturers' brands (store brands excluded), frozen, 454 g package.

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 213 g tin.

Dairy Products

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 L.

Milk 2%. Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 L.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **rôti désossé**, 1 kg.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

Bacon. Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 450 g.

Volaille

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

Poisson

Filets de morue. Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 213 g.

Produits laitiers

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 L (en carton), non consigné.

Lait 2%. Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 L (en carton), non consigné.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1 kg cardboard package, may be pasteurized or vitaminized.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 mL can.

Eggs. Large eggs, Grade A, in a carton of 1 dozen.

Bakery and Cereal Products

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Bread. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

Macaroni. Generally available manufacturers' brands (store brands excluded) dry, tubular shape, straight or elbow (ready-cut) macaroni. May be vitaminized, 500 g package.

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

Fruit

Bananas. First grade, price per kg.

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

Oranges. California, medium size (138 or 113) price per kg.

Orange juice. Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 L.

Lait en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1 kg, peut être pasteurisé ou vitaminé.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 mL.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12.

Céréales et produits de boulangerie

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

Macaroni. Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, droit ou courbé (coupé). Peut-être vitaminé, paquet de 500 g.

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prémâchée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

Flocons de maïs. Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

Fruits

Bananes. Première qualité, vendues au kg.

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

Oranges. De Californie, grosseur moyenne (138 ou 113) prix au kg.

Jus d'orange. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 L.

Vegetables

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages price per kg.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

Lettuce. Fresh head, green, good quality, average size head, price per kg.

Mushrooms. Cultivated, fresh, domestic or imported, Canada No. 1, 400 g.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

Potatoes. Table potatoes, white, Canada No. 1, 4.54 kg.

French fried potatoes. Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg poly bag.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 mL.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 mL.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose; fancy grade, 1.36 L.

Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kg.

Beverages

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 227 g.

Légumes

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

Champignons. Cultivés, frais, domestiques ou importés, catégorie Canada n° 1, 400 g.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada n° 1, sac de 4.54 kg.

Pommes de terre frites. Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg en matière plastique.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 mL.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 mL.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 L.

Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

Boissons

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 227 g.

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 72 two-cup paper bags (227 g).

Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

Miscellaneous Groceries

Tomato ketchup. Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 L bottle.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 mL.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 mL.

Peanut butter. Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 mL.

Supplies and Personal Care Items

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 L.

Facial tissue. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

Bathroom tissue. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, two ply sheets. Units of four, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 72 sachets de papier pour deux tasses chacun (227 g).

Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

Articles divers d'épicerie

Ketchup aux tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 L.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 mL.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 mL.

Beurre d'arachides. Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 mL.

Fournitures et articles de soins personnels

Détergant synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 L.

Papier mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, double épaisseur. Paquets de quatre, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 mL.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in one or multiple units (up to four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 mL.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en paquet d'un ou plusieurs pains (jusqu'à quatre unités). Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Tabacs

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 23 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 15 and Appendix 4.

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 23 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

(1) Voir tableau 15 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Footnotes for Table 23

- (2) The weights shown are rounded 1982 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures (Occasional)**, Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982 (hors-série)**, n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 8 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 8 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Tony Nabata**, Acting Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

The Highlights section provides a brief analysis of price movements for the current quarter. As well, the special feature is summarized in this section.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. The special feature is presented in part V of the publication.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La section portant sur les points saillants présente une brève analyse des mouvements de prix du trimestre courant. De plus, l'article vedette est résumé dans cette section.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagregé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. L'article vedette se retrouve à la partie V de cette publication.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

HIGHLIGHTS

Consumer Price Behaviour

Second Quarter, 1987

Trends in the All-items Index

In seasonally adjusted terms, the monthly rates of change for the All-items Consumer Price Index (CPI) for Canada were slightly higher over the second quarter of 1987 than over the first quarter of 1987. During this period, the monthly seasonally adjusted index rose 0.3% in April, 0.5% in May, and 0.4% in June, while the monthly rates for January, February, and March were 0.2%, 0.3%, and 0.4% respectively.

This accelerating trend was also supported by the unadjusted rate of change for the CPI which posted a 1.3% increase between March and June compared to a rise of 1.1% in the first quarter of 1987. In addition, the average of the year-to-year increases for April, May and June (4.6%) was greater than the 4.0% average for January to March. Thus, all the available data support an overall accelerating trend in the All-items CPI from the first quarter to the second quarter of 1987.

Major Contributors to the Second Quarter Change

As noted above, between March and June 1987, the CPI rose by 1.3% (not seasonally adjusted). The Food and Housing indexes which posted increases of 2.1% and 1.0% respectively, contributed over 50% of the overall upward movement. The other five major components posted gains ranging from 0.5% for Clothing to 3.4% for Tobacco Products and Alcoholic Beverages.

The 2.1% increase in the Food index was attributable to a 2.7% gain in the index for Food Purchased from Stores, moderated somewhat by no change for Food Purchased from Restaurants. Major contributions to the rise in the former index were made by increases in the prices of meat products (3.6%), fresh vegetables (15.8%), and fresh fruit (16.0%). The overall upward movement in the Food index was partially dampened by price decreases for coffee (-10.1%) and carbonated beverages (-8.3%).

Strong price increases were observed for both beef (5.3%) and pork (11.2%) products for the quarter due to limited supplies of slaughter cattle, as well as limited U.S. supplies of hogs for slaughter which has pushed up the North American price for all pork products.

POINTS SAILLANTS

Comportement des Prix à la Consommation

Deuxième trimestre, 1987

Tendances de l'indice d'ensemble

Les taux mensuels de variation de l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) pour le Canada ont légèrement dépassé au deuxième trimestre de 1987 les taux observés au premier trimestre de 1987. Au cours de la période, l'indice désaisonnalisé a gagné 0.3% en avril, 0.5% en mai et 0.4% en juin, comparativement à des taux mensuels d'augmentation de 0.2%, 0.3% et 0.4% en janvier, février et mars respectivement.

Cette tendance à l'accélération est également mise en évidence par le taux de variation de l'IPC non désaisonnalisé, qui s'est inscrit en hausse de 1.3% entre mars et juin alors qu'il avait augmenté de 1.1% au premier trimestre de 1987. En outre, la moyenne des augmentations d'une année à l'autre en avril, mai et juin (4.6%) dépasse la moyenne de 4.0% enregistrée pour la période de janvier à mars. Ainsi, toutes les données disponibles font ressortir une accélération de l'IPC d'ensemble entre le premier et le deuxième trimestre de 1987.

Principaux facteurs du changement au deuxième trimestre

Tel que mentionné ci-haut, entre mars et juin 1987, l'IPC a augmenté de 1.3% (avant désaisonnalisation). Les indices des aliments et de l'habitation, qui ont affiché des hausses de 2.1% et de 1.0% respectivement, sont responsables de plus de la moitié du mouvement global à la hausse. Les cinq autres composantes principales ont affiché des gains compris entre 0.5% pour l'habillement et 3.4% pour les produits du tabac et les boissons alcoolisées.

L'augmentation de 2.1% de l'indice des aliments est attribuable au gain de 2.7% de l'indice des aliments achetés au magasin, l'augmentation ayant été toutefois tempérée par l'indice des aliments achetés au restaurant qui est demeuré inchangé. Les grands responsables de la montée de l'indice des aliments achetés au magasin sont les produits de la viande (en hausse de 3.6%), les légumes frais (en hausse de 15.8%) et les fruits frais (en hausse de 16.0%). Le mouvement à la hausse de l'indice des aliments a été freiné en partie par la diminution des prix du café (-10.1%) et des boissons gazeuses (-8.3%).

Des majorations importantes ont été observées au deuxième trimestre pour les produits du boeuf (5.3%) et du porc (11.2%) en raison du nombre limité de bovins d'abattage de même que du nombre limité de porcs d'abattage aux États-Unis, ce qui a fait monter les prix de tous les produits du porc sur le marché nord-américain.

Within the fresh vegetable group, larger than average price increases were observed for potatoes (45.4%), onions (52.7%) and tomatoes (21.4%). The price of cucumbers and lettuce on the other hand fell 18.3% and 13.6%, respectively, during the quarter. The rise in the fresh fruit index was led by price gains for apples (12.3%), grapefruits (46.7%), oranges (11.4%), and bananas (8.1%).

All three of the major components of the Housing index rose over the quarter: Shelter (1.1%), Household Operation (0.8%), and Household Furnishings, Equipment and Related Services (0.2%). The Shelter index provided the major contribution to the quarterly rise, as increases in the cost of new housing (4.8%), rent (0.6%), and electricity (1.9%) were partly offset by declines in rates for fuel oil (-1.6%), tenants' insurance premiums (-1.6%) and natural gas (-0.1%). Although the annual movement for fuel oil has risen from -19.8%, last quarter, to -0.9%, this quarter, the index is still 33% below peak 1986 levels.

The Transportation index recorded a 0.9% increase during the quarter, as a 1.7% increase in the Public Transportation component combined with a 0.8% rise in the Private Transportation component. Most of these gains were due to a 3.4% increase in the price of gasoline and a 2.4% increase in the cost of air transportation. A 1.2% drop in the cost of new automobiles (primarily the combination of cash rebate programs and major extensions in new car warranties) provided the major moderating influence on the overall upward movement.

The 1.4% increase in the Recreation, Reading and Education index also made a moderate contribution to the second quarter rise of the All-items index. The latest increase resulted from gains posted by the Recreation (1.8%) and Reading (1.4%) component indexes, while the Education component remained unchanged. Notable price increases were observed for photographic goods and services; purchase of recreational vehicles; tickets to movies; and the use of recreational, sports and health facilities.

The Tobacco Products and Alcoholic Beverages index climbed by 3.4% in the second quarter with both the indexes for tobacco products (4.5%) and alcoholic beverages (2.6%) contributing to the upward movement. A price increase of 2.6% for the Health Care component and 1.0% for the Personal Care

S'agissant du groupe des légumes frais, des augmentations de prix supérieures à la moyenne ont été observées pour les pommes de terre (45.4%), les oignons (52.7%) et les tomates (21.4%). Les prix des concombres et de la laitue ont par contre chuté de 18.3% et de 13.6% respectivement au cours du trimestre. La montée de l'indice des légumes frais est imputable surtout au renchérissement des pommes (12.3%), des pamplemousses (46.7%), des oranges (11.4%) et des bananes (8.1%).

Les trois composantes principales de l'indice de l'habitation ont augmenté au cours du trimestre, les hausses atteignant 1.1% pour le logement, 0.8% pour les dépenses de ménage et 0.2% pour les articles d'ameublement, l'équipement ménager et les services connexes. L'indice du logement est celui qui a le plus contribué à la progression trimestrielle, les augmentations des prix des logements neufs (4.8%), du loyer (0.6%) et des tarifs de l'électricité (1.9%) ayant été contrebalancées en partie par les diminutions du prix du mazout (-1.6%), des primes d'assurance à la charge des locataires (-1.6%) et des tarifs du gaz naturel (-0.1%). Bien que le mouvement annuel des prix du mazout soit passé de -19.8% au trimestre précédent à -0.9% ce trimestre-ci, l'indice se situe toujours à un niveau inférieur de 33% aux sommets de 1986.

L'indice des transports a enregistré une augmentation de 0.9% au cours du trimestre en raison du relèvement de 1.7% de la composante du transport public, conjugué à l'accroissement de 0.8% de la composante du transport privé. Ces hausses sont dues principalement à l'augmentation de 3.4% des prix de l'essence et à la hausse de 2.4% des tarifs du transport aérien. Le recul de 1.2% des prix des voitures neuves (résultat des programmes de remises au comptant et des prolongements importants des garanties sur les véhicules neufs) a le plus contribué à freiner le mouvement global à la hausse.

L'augmentation de 1.4% de l'indice des loisirs, de la lecture et de la formation a également contribué quelque peu à la montée de l'indice d'ensemble au deuxième trimestre. La dernière augmentation est le résultat des gains affichés par les indices des composantes des loisirs (1.8%) et de la lecture (1.4%), la composante de la formation étant demeurée inchangée. Les prix du matériel et des services photographiques, les prix d'achat de véhicules de loisirs, les droits d'entrée au cinéma et les frais d'utilisation d'installations de loisirs, de sport et de santé ont notablement augmenté.

L'indice des produits du tabac et des boissons alcoolisées a grimpé de 3.4% au deuxième trimestre, l'indice des produits du tabac (4.5%) et celui des boissons alcoolisées (2.6%) ayant tous deux contribué au mouvement à la hausse. Des majorations de prix de 2.6% de la composante des soins de santé et de 1.0% de la composante des

component contributed to the 1.6% rise posted in the current quarter by the Health and Personal Care index. The 0.5% quarterly gain in the Clothing index was due primarily to a 0.8% increase in the price of women's wear. Prices of men's wear and girls' wear both rose 0.2%, while boys' wear declined 0.3%.

Special Topics Summary

A special price index series for fresh vegetables was calculated from 1982 forward using separate monthly baskets for each of the 12 months of the year. This seasonal-basket series ensures that each month of the year will be represented in the annual index in proportion to the purchases made in the month in question.

The 1982-based annual-basket series that is used to calculate the official fresh vegetables CPI shows fresh vegetable prices rising in 1983 and 1984, with the rate of price change more than doubling from one year to the next. In 1985, price declines wiped out much of the 1984 increase but prices once more rose strongly in 1986.

By contrast, the seasonal-basket series shows fresh vegetable prices rising at about the same rate in 1983 and 1984. The 1985 price declines more than offset the price increases of the previous year so that fresh vegetable prices were actually lower in 1985 than in 1983. The rate of price change in 1986 is substantially higher for the seasonal-basket series than for the annual-basket series, although both series record double-digit rates of price change.

Although the differences between annual-basket and seasonal-basket indexes are substantial, the differences between the CPI All-items and an All-items series with a seasonal-basket approach to fresh vegetables, or even to all seasonal food groups, would be by no means so large, if only because purchases of seasonal food items constitute a relatively small share of total consumer expenditures. For more details see the article on pages 109-124 entitled "A Seasonal-Basket Price Index for Fresh Vegetables".

soins personnels ont contribué à la montée de 1.6% de l'indice de la santé et des soins personnels au cours du trimestre. Le gain trimestriel de 0.5% de l'indice de l'habillement est dû surtout à l'augmentation de 0.8% des prix des vêtements pour femmes. Les prix des vêtements pour hommes de même que ceux des vêtements pour filles ont augmenté de 0.2%, alors que les prix des vêtements pour garçons baissaient de 0.3%.

Sommaire de sujets spéciaux

Une série spéciale d'indices de prix pour les légumes frais a été calculée à partir de 1982 à l'aide de paniers mensuels distincts pour chacun des douze mois de l'année. Cette série à panier saisonnier permet de garantir que chaque mois de l'année sera représenté dans l'indice annuel en proportion des achats effectués au cours du dit mois.

La série à panier annuel basé sur 1982 qui sert à calculer l'IPC officiel des légumes frais révèle que les prix des légumes frais ont augmenté en 1983 et 1984, le taux de variation des prix ayant plus que doublé d'une année à l'autre. En 1985, des baisses de prix ont pratiquement effacé les hausses de 1984 mais les prix ont de nouveau fortement augmenté en 1986.

Par contre, la série à panier saisonnier indique que le taux d'augmentation des prix des légumes frais est à peu près le même en 1983 et 1984. La baisse des prix en 1985 a plus que neutralisé les augmentations de prix de l'année précédente de sorte que les prix des légumes frais sont en fait plus bas en 1985 qu'en 1983. Le taux de variation des prix en 1986 mesuré par la série à panier saisonnier dépasse sensiblement celui mesuré par la série à panier annuel, même si les deux séries affichent des taux de variation de prix à deux chiffres.

Même si les différences entre l'indice à panier annuel et celui à panier saisonnier sont importantes, une comparaison de l'IPC d'ensemble et d'une série d'ensemble utilisant l'approche du panier saisonnier pour les légumes frais, voire pour l'ensemble des aliments saisonniers, ferait ressortir des différences beaucoup moins importantes, ne serait-ce que parce que l'achat d'aliments saisonniers ne représente qu'une part relativement faible des dépenses de consommation totales. Pour plus de détails, voir l'article intitulé "Un indice de prix à panier saisonnier pour les légumes frais" aux pages 109-124.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

ARTICLE VEDETTE

Introduction

The treatment of seasonal commodities in the Consumer Price Index (CPI) is a subject of great interest to Prices Division, especially with regard to the use of seasonal baskets. Although they are no longer used in the calculation of any consumer price series, seasonal baskets were formerly used in the CPI for seasonal food groups, using a formula developed within Statistics Canada. This formula was modified with the 1957 updating and the number of seasonal items in the price sample was greatly expanded. However, in 1973 the updating to 1967 expenditures saw the abandonment of the seasonal-basket (SB) approach to seasonal commodities in favour of the annual-basket (AB) approach used elsewhere in the CPI.¹

The last updating of the CPI basket was not marked by any change in the index formula, but it was significant in another respect. With the updating to 1982 expenditures, the last seasonally priced articles of food still included in the Consumer Price Survey were dropped from the list of priced items. Fresh corn and fresh strawberries, which were formerly priced in their in-season months, are now imputed series.

When it was based on a 1957 basket and used seasonal weights for seasonal food groups, the CPI incorporated fresh strawberries, fresh peaches, grapes and fresh corn as priced items. All of these items were deleted from pricing except for grapes when the CPI reverted to seasonally invariant weights for seasonal commodity groups. With the 1974 updating, strawberries and corn once again became priced items, but grapes were dropped from pricing. Since the 1982 updating, there are no seasonally priced food items in the CPI. To some degree, these exclusions stem from the use of an AB approach, which makes it difficult to include highly seasonal commodities without generating an unduly erratic price series. This under-representation or non-representation of highly seasonal items in the CPI for food provides a good reason to re-examine the SB approach to seasonal commodities.

This study presents a SB index for fresh vegetables as an example of a SB series for a typical seasonal commodity group. There were two reasons for the choice of fresh vegetables rather than some other expenditure category as the object of study. First, the fresh vegetables group is among the most seasonal of commodity groups. In the official CPIs of all countries that handle seasonal commodity groups in a special way, articles of fresh produce are always among the items given special treatment. Second, of the two categories of fresh produce, there are more priced items for fresh vegetables than there are for fresh fruit, and these are somewhat more representative of the group as a whole.

The next section discusses the formulas for AB and SB indexes. It is followed by a section describing how the monthly value weights of the SB index were calculated and another section which analyses these weights. The following section, 'Analysis of Price Movements', compares the AB and SB indexes. The two series tell quite different stories about the evolution of fresh vegetable prices in recent years. The

Introduction

Le traitement des produits saisonniers dans l'indice des prix à la consommation (IPC) est un sujet présentant un grand intérêt à la Division des prix, en particulier dans le cas de l'utilisation des paniers saisonniers. Bien que ces derniers ne soient présentement utilisés dans le calcul d'aucune série de prix à la consommation, ils étaient utilisés dans l'IPC pour les groupes d'aliments saisonniers et ceci en servant d'une formule mise au point à Statistique Canada. Cette formule a été modifiée après la mise à jour de 1957 et le nombre d'articles saisonniers dans l'échantillon des prix a été considérablement accru. Cependant, en 1973, la mise à jour selon les dépenses de 1967 a entraîné l'abandon de la méthode du panier saisonnier (PS) pour les produits saisonniers en faveur de celle du panier annuel (PA), qui est utilisée pour le reste de l'IPC¹.

La dernière mise à jour du panier de l'IPC ne s'est pas caractérisée par un changement de la formule de l'indice, mais elle a été importante à d'autres égards. Avec le passage aux dépenses de 1982, les derniers aliments à relevés de prix saisonniers faisant encore partie de l'enquête sur les prix à la consommation ont été retirés de la liste des articles. Le maïs frais et les fraises fraîches, dont le prix auparavant était relevé selon leurs mois de saison active, sont maintenant des séries imputées.

Quand il utilisait le panier de 1957 et des pondérations saisonnières pour le groupe d'aliments saisonniers, l'IPC incorporait les fraises fraîches, les pêches fraîches, le raisin et le maïs frais comme produits dont le prix était relevé. Tous ces produits ont été supprimés du programme d'observation des prix à l'exception des raisins, lorsque l'IPC est revenu à des pondérations invariables d'une saison à l'autre pour les groupes de produits saisonniers. Avec la mise à jour de 1974, les fraises et le maïs sont redevenus des produits dont le prix était relevé, mais les raisins ont été exclus. Depuis la mise à jour de 1982, il n'y a plus de produits alimentaires dans l'IPC dont le prix est relevé de façon saisonnière. Dans une certaine mesure, ces exclusions proviennent de l'utilisation de l'approche PA, qui rend difficile l'inclusion de produits hautement saisonniers sans causer des fluctuations excessivement irrégulières dans une série de prix. Cette sous-représentation ou non-représentation de produits hautement saisonniers dans l'IPC pour les aliments constitue une bonne raison pour rouvrir le dossier de l'approche PS pour les produits saisonniers.

Cette étude présente un indice PS pour les légumes frais comme un exemple d'une série PS pour un groupe de produits saisonniers type. Il y a deux raisons pour le choix des légumes frais plutôt que d'une autre catégorie de dépense. D'abord, le groupe des légumes frais est un des plus saisonniers qui soient. Dans les IPC officiels de tous les pays qui traitent les groupes de produits saisonniers de façon spéciale, les produits frais font toujours partie de ceux qui ont un traitement spécial. Ensuite, des deux catégories de produits frais, on relève les prix davantage des légumes frais que de fruits frais, et ceux-ci sont quelque peu plus représentatifs du groupe dans son ensemble.

La section suivante examine les formules des indices PA et PS. Elle est suivie d'une autre qui présente la façon dont les pondérations mensuelles en valeur de l'indice PS, ont été calculées, et d'une autre section qui les analyse. La section suivante, consacrée à l'analyse du mouvement des prix, compare les indices PA et PS. Les deux séries donnent une perspective différente de l'évolution des prix des légumes frais au cours des dernières années. La dernière section conclut que la

¹ A note on SB formulas previously used in the official CPI is available from the author on request.

¹ Une note sur les formules PS utilisées auparavant dans l'IPC officiel est disponible sur demande auprès de l'auteur.

final section concludes that Prices Division should take a second look at the SB approach for the calculation of consumer price series for seasonal food groups.

Those readers who are mainly interested in the results of this study may wish to go directly to the section 'Analysis of Price Movements', which is largely understandable without reading the sections that precede it.

Index Formulas

The formula for the AB price index shown in Table 3 is:

$$P_{y,m/82} = \sum P_{y,m} q_{82} / \sum P_{82} q_{82} \quad (1)$$

where

$P_{y,m}$ is the price of a given vegetable in month m of year y ,

q_{82} is the annual quantity purchased of this vegetable in 1982,

and

où

$P_{y,m}$ est le prix d'un légume donné au cours du mois m de l'année y ,

q_{82} est la quantité annuelle achetée de ces légumes en 1982,

et

$$P_{82} = (\sum_m P_{y,m}) / 12$$

that is, the base year prices are calculated as unweighted averages of the 12 monthly prices in the base year. This is simply the formula for a Laspeyres price index with a 1982 base period. It can be re-expressed in terms of expenditure weights and component price relatives as:

c'est-à-dire que les prix de l'année de base sont calculés comme des moyennes non pondérées des 12 prix mensuels de l'année de base. C'est simplement la formule d'un indice de prix de Laspeyres avec la base de 1982. On peut le réécrire en utilisant des pondérations en termes de dépenses et des rapports de prix constitutifs sous la forme:

$$P_{y,m/82} = \sum_j W_{82}^j P_{y,m/82}^j$$

where

où

$$W_{82}^j = P_{82} q_{82} / \sum_j P_{82} q_{82}$$

$$P_{y,m/82}^j = P_{y,m} / P_{82}$$

and j denotes the j th commodity in the group.

et j dénote le produit j du groupe.

The annual index numbers for the AB series are simple averages of the corresponding monthly index numbers, that is:

Les nombres-indices annuels de la série PA sont des moyennes simples des nombres-indices correspondants, c'est-à-dire:

$$P_{y/82} = (\sum_m (\sum_j P_{y,m} q_{82} / \sum_j P_{82} q_{82})) / 12 \quad (2)$$

$$= (\sum_m P_{y,m/82}) / 12$$

The formula for the SB price index shown in Table 3 is:

$$P_{y,m/82} = P_{y,m} q_{82,m} / \sum P_{82} q_{82,m} \quad (3)$$

where

$q_{82,m}$ is the quantity purchased of the given vegetable in month m of 1982,

and

où

$q_{82,m}$ est la quantité d'un légume donné, achetée au cours du mois m de 1982,

et

$$P_{82} = \sum_m P_{82,m} q_{82,m} / \sum_m q_{82,m} \quad (4)$$

that is, the base year prices are calculated as weighted averages of the 12 monthly prices in the base year. The sum of the 12 quantity weights equals the quantity purchased of the given vegetable in 1982, but the monthly quantity weights reflect a typical seasonal pattern rather than the particular quantities purchased for the months of 1982 (see the section "Calculation of Monthly Weights"). This is the formula for a SB price index with 1982 annual base prices and a constant seasonal pattern; it is a variant of what is commonly known as the Rothwell formula.²

It can be re-expressed in terms of value weights and component price indexes as:

c'est à dire les prix de l'année de base sont calculés comme des moyennes pondérées des 12 prix mensuels de l'année de base. La somme des 12 pondérations en quantité est égale à la quantité du légume donné achetée en 1982, mais les pondérations en quantité mensuelles traduisent un mouvement saisonnier type plutôt que les quantités achetées au cours des mois de 1982 (voir la section relative au calcul des poids mensuels). C'est la formule d'un indice de prix PS avec les prix annuels de base de 1982 et une composante saisonnière constante; c'est une variante² de ce qu'on appelle habituellement la formule Rothwell.

Il peut être ré-écrit en termes de pondérations en valeur des indices des prix constitutifs sous la forme:

$$P_{y,m/82} = \sum_j w_m^j P_{y,m/82}^j \quad (5)$$

where

où

$$w_m^j = P_{82} q_{82,m}^j / \sum_j P_{82} q_{82,m}^j \quad (6)$$

and

et

$$P_{y,m/82}^j = P_{y,m}^j / P_{82}^j \quad (7)$$

² This formula has been called the Rothwell formula because it was described and advocated by Doris Rothwell of the U.S. Bureau of Labor Statistics. (See "Use of Varying Seasonal Weights in Price Index Construction", by Doris P. Rothwell, *Journal of the American Statistical Association*, XLIII, pp. 66-77.) However, it was discovered much earlier by Bean and Stine of the U.S. Bureau of Agricultural Economics, in a pathfinding paper which anticipated much of the later work on price indexes for seasonal commodities. (See "Four Types of Index Numbers of Farm Prices", by L.H. Bean and O.C. Stine, *Journal of the American Statistical Association*, XIX, pp. 30-35.) I am grateful to Bohdan Szulc, who drew my attention to this paper. It has not been listed in the references of any other study on seasonal commodities that I have seen.

² Cette formule a été appelée la formule Rothwell, parce qu'elle a été proposée et définie par Doris Rothwell, du U.S. Bureau of Labor Statistics. (Voir "Use of Varying Seasonal Weights in Price Index Construction", par Doris P. Rothwell, *Journal of the American Statistical Association*, XLIII, pp. 66-67.) Cependant, cet indice a été découvert beaucoup plus tôt par Bean and Stine, du U.S. Bureau of Agricultural Economics, dans un document fondamental qui anticipait la plus grande partie des travaux ultérieurs sur les indices de prix des produits saisonniers. (Voir "Four Types of Index Numbers of Farm Prices", par L.H. Bean et O. C. Stine, *Journal of the American Statistical Association*, XIX, pp. 30-35.) Je remercie ici Bohdan Szulc, qui a attiré mon attention sur ce document. Il ne figurait pas dans la bibliographie de toute autre étude sur les produits saisonniers que j'ai pu voir.

Several countries use the Rothwell formula for seasonal commodity groups in calculating their official consumer price series, notably Japan and the United Kingdom. From 1961 to March 1973, a formula equivalent to the Rothwell formula was also used in the Canadian CPI to calculate the aggregate index for all seasonal food groups.

The chief advantage of any SB formula is that it allows for a representative weighting of seasonal commodities for each given month of the year. Another advantage of the SB formula relates to seasonally disappearing commodities, those commodities that are available only part of the year. In calculating an AB index, it is necessary to impute assumed prices for seasonally disappearing commodities in their out-of-season months. In calculating a SB index, no imputation is necessary since the commodity's index weight is nil in months when it is unavailable.

In addition to these general attributes of a SB formula, the Rothwell formula has a number of other attractive properties that has earned it favour among statistical practitioners.

First, if all monthly baskets are equivalent, the Rothwell formula reduces to the standard AB formula, as can readily be seen by comparing (1) and (3).

Second, corresponding to the Rothwell formula for a monthly series is the following formula for an annual series:

$$P_{y/82} = \sum_m \sum_j P_{y,m} q_{82,m} / \sum_m \sum_j P_{82,m} q_{82,m} \quad (8)$$

or

$$P_{y/82} = \sum_m W_m P_{y,m/82}$$

ou

où

where

$$W_m = \sum_j W_m^j \quad (9)$$

Such an annual index appropriately represents price movements of each commodity in each calendar month of the year. At the same time, it provides, like the index defined by (2), a measure of pure price change: changes in the annual index reflect changes in the annual movement of its component series and are undistorted by any index weight shifts.

Third, the 12-month changes of an index calculated using the Rothwell formula are also measures of pure price change. The ratio of the index numbers for the same calendar month of consecutive years has the formula:

$$P_{y,m/y-1,m} = \sum P_{y,m} q_{82,m} / \sum P_{y-1,m} q_{82,m}$$

so that any change in a group index over a 12-month period must be due to a change in its component³ indexes, and not to shifts in the component weights.

Plusieurs pays utilisent la formule Rothwell pour les groupes de produits saisonniers dans le calcul de leur indice officiel des prix à la consommation, notamment le Japon et le Royaume-Uni. De 1961 à mars 1973, on a utilisé une formule équivalente à celle de Rothwell dans l'IPC du Canada pour le calcul de l'indice global de tous les groupes de produits alimentaires saisonniers.

Le principal avantage d'une formule PS est qu'elle permet d'obtenir une pondération représentative des produits saisonniers pour chaque mois de l'année. Un autre avantage de la formule PS se rapporte aux produits à consommation saisonnière, c'est-à-dire ceux qui ne sont disponibles qu'une partie de l'année. Lors du calcul d'un indice PA, il faut imputer les prix supposés de ce type de produit pour les mois hors saison. Lors du calcul d'un indice PS, aucune imputation n'est nécessaire, puisque la pondération d'un indice du produit est nulle pour les mois au cours desquels il n'est pas disponible.

En plus de ces caractéristiques générales d'une formule PS, la formule Rothwell possède un certain nombre d'autres propriétés intéressantes qui expliquent la faveur dont elle jouit auprès des statisticiens-praticiens.

D'abord, si tous les paniers mensuels sont équivalents, la formule Rothwell se ramène à la formule-type PA, comme on peut le voir facilement en comparant (1) et (3).

Ensuite, à la formule Rothwell d'une série mensuelle correspond la formule suivante pour une série annuelle:

Un tel indice annuel représente bien le mouvement des prix de chaque produit au cours de chaque mois civil de l'année. En même temps, il fournit, comme l'indice défini en (2), une mesure de la variation de prix pure: les variations de l'indice annuel traduisent celles du mouvement annuel de ses séries constitutives, sans aucune distorsion causée par un réaménagement des pondérations de l'indice.

Enfin, les variations sur 12 mois d'un indice calculé selon la formule Rothwell sont également des mesures de la variation pure de prix. Le ratio des nombres indices pour le même mois civil d'années consécutives est donné par la formule:

de sorte que toute variation d'un indice de groupe sur une période de 12 mois doit s'expliquer par une variation de ses indices constitutifs et non pas par des mouvements dans les pondérations des composantes³.

³ This property is not possessed by the Balk formula, another SB formula that is employed in the calculation of official series. See Bert M. Balk, "Seasonal Products in Agriculture and Horticulture and Methods for Computing Price Indices", Statistical Studies No. 24, The Hague, Netherlands, Central Bureau of Statistics.

³ La formule Balk, qui est une autre formule PS utilisée dans le calcul des séries officielles, ne possède pas cette propriété. Voir Bert M. Balk, "Seasonal Products in Agriculture and Horticulture and Methods for Computing Price Indices", Statistical Studies No. 24, La Haye, Pays-Bas, Bureau central de la statistique.

Against these advantages, the Rothwell formula has the considerable disadvantage, shared by all SB formulas, that it does not provide a current measure of pure price change for monthly movements, or for that matter, for quarterly, three-month or six-month movements. Because the index basket changes from month to month, the monthly movement of a Rothwell index may fall outside of the bounds defined by its components with the lowest and highest monthly rates of change, and in fact, the aggregate index may show a positive or negative movement even if there is no change in the prices of any of its components.

Although the monthly movement of a Rothwell index does not constitute a measure of pure price change, one can readily decompose the monthly movement of the index into two different components one of which represents pure price change. This and other details on the monthly movement of the SB index can be found in the appendix.

Calculation of Monthly Weights

Monthly value weights for fresh vegetables were derived using estimates from the Food Expenditure Survey program,⁴ conducted by Household Surveys Division. The Food Expenditure Survey is a diary survey; for each month of the year an equal number of respondents are asked to keep diaries of their food expenditures over a two-week period. Respondents record both quantities purchased (e.g., the number of heads of lettuce, the number of kilograms of potatoes) and dollar expenditures.

The 1982 Food Expenditure Survey covered both urban and rural households in the 10 provinces of Canada and in the Territories. The target population for the CPI is all households in urban centres with 30,000 or more people. The monthly expenditure weights shown below were based on data for the 9,297 surveyed households living in those urban centres.

Since the seasonal pattern of fresh vegetable purchases will likely fluctuate considerably due to weather conditions and other factors, it is safer to base the seasonal expenditure pattern on purchases for more than a single year. If Statistics Canada had a program of continuous family expenditure surveys the seasonal pattern might be based on the last three or four years up to and including 1982. Unfortunately, the Food Expenditure Survey is only conducted every two or four years so that any pooled estimates must be based on data from non-contiguous years. The most recent survey year prior to 1982 was 1978. There was also a 1984 Family Food Survey carried out in 17 cities, which covered 5,947 households.

Consequently, pooled estimates of the seasonal expenditure pattern were based on data from the 1982 and 1984 Food Expenditure Surveys with data from each month weighted by the weighted number of weekly records for each survey. Because the 1984 Food Expenditure Survey relates to only 17 urban centres, these centres have a disproportionate influence on the estimated seasonal pattern. This is an acceptable shortcoming if, as expected, the pooling of 1982 and 1984

Par contre, la formule Rothwell présente l'inconvénient considérable, propre à toutes les formules PS, de ne pas fournir de mesure courante de la variation pure de prix des mouvements de prix mensuels, ou, par extension, pour les mouvements de prix sur trois, quatre ou six mois. Comme le panier de l'indice change d'un mois à l'autre, le mouvement mensuel de l'indice Rothwell peut tomber à l'extérieur des bornes fixées par ses composantes ayant les taux mensuels de variation le plus bas et le plus élevé, et en fait, l'indice global peut enregistrer un mouvement positif ou négatif même si le prix d'aucune de ses composantes ne varie.

Bien que le mouvement mensuel d'un indice Rothwell ne constitue pas une mesure de la variation pure de prix, il est possible de décomposer facilement le mouvement mensuel de l'indice en deux composantes différentes, dont l'une représente la variation pure de prix. L'annexe contient des renseignements sur cette décomposition et d'autres détails sur le mouvement mensuel de l'indice PS.

Calcul des pondérations mensuelles

Les pondérations mensuelles en valeur des légumes frais ont été établies à partir des estimations provenant de l'enquête sur les dépenses alimentaires⁴ de la Division des enquêtes des ménages. Cette enquête est une enquête par journal; pour chaque mois de l'année, on demande à un nombre égal de répondants de tenir un journal de leurs dépenses alimentaires au cours d'une période de deux semaines. Les répondants enregistrent à la fois les quantités achetées (nombre de têtes de laitue, nombre de kilogrammes de pommes de terre, etc.) et les dépenses proprement dites.

L'enquête sur les dépenses alimentaires de 1982 a été effectuée auprès des ménages urbains et ruraux des 10 provinces du Canada et des territoires. La population cible de l'IPC sont tous les ménages des centres urbains de 30,000 habitants ou plus. Les pondérations mensuelles en valeur indiquées ci-dessous sont basées sur les données pour les 9,297 ménages enquêtés, vivant dans ces centres urbains.

Comme le profil saisonnier des achats de légumes frais va probablement fluctuer considérablement en raison des conditions atmosphériques et d'autres facteurs, il est plus sûr de baser la répartition saisonnière des dépenses sur les achats pour plus d'une année. Si Statistique Canada avait un programme d'enquêtes permanentes sur les dépenses des familles, le profil saisonnier pourrait être basé sur les trois ou quatre années remontant jusqu'en 1982 inclusivement. Malheureusement, l'enquête sur les dépenses alimentaires n'est faite que tous les deux ou quatre ans, de sorte que toute estimation combinée doit être basée sur des données provenant d'années non consécutives. L'année la plus récente avant l'enquête de 1982 était 1978. Il y a eu également une enquête sur les dépenses alimentaires des familles de 1984, exécutée dans 17 villes et auprès de 5,947 ménages.

Par conséquent, les estimations combinées du profil saisonnier des dépenses ont été basées sur les données provenant des enquêtes sur les dépenses alimentaires de 1982 et 1984, les données de chaque mois étant pondérées par le nombre pondéré de dossiers hebdomadaires pour chaque enquête. Comme l'enquête sur les dépenses alimentaires de 1984 ne porte que sur 17 centres urbains, ces derniers ont une influence disproportionnée sur le modèle saisonnier estimé. C'est un inconvénient acceptable si, comme on pouvait s'y attendre, la

⁴ I would like to express my thanks to Ms. Robin Chaplin of Household Surveys Division, who was responsible for the special tabulations of the family expenditure data needed to derive these monthly weights.

⁴ Je voudrais ici remercier Ms. Robin Chaplin, de la Division des enquêtes des ménages, qui a pris la responsabilité des tableaux spéciaux des données sur les dépenses des familles nécessaires à l'obtention de ces poids mensuels.

estimates provides a more representative seasonal pattern for the overall estimation period. These 17 urban centres contain much the greater part of the CPI's target population. Data from the 1978 Food Expenditure Survey were not incorporated in the pooled estimates.

For all vegetables, monthly value weights were calculated by multiplying monthly quantities purchased by the average 1982 base prices, where the quantities purchased represent pooled estimates from the 1982 and 1984 Family Food Surveys. For the nine priced categories, which accounted for 72.5% of 1982 expenditures on fresh vegetables, expenditure weights were also derived by deflating the expenditures for each month by the corresponding price index number and prorating the constant dollar values so generated to sum to the 1982 annual expenditure. The first method corresponds to deflation based on unit values, the second to deflation based on prices.

A comparison of the weights derived using the two methods reveals that for each of the nine vegetables the weights calculated using the second method showed a greater amplitude than the weights calculated using the first method. The peak month of purchase has a substantially greater relative importance in terms of total annual purchases for the set of weights that use the appropriate CPI as a deflator.

These results are not at all surprising, since generally better quality fresh produce is sold in the inseason months of the year and lower quality produce takes up a larger share of the market in the off-season. A unit value deflator is thus likely to under-deflate purchases in the off-season months and over-deflate purchases in the in-season months, generating monthly expenditure weights that are not as seasonal as they should be.

Overall it seemed that the weights corresponding to deflation using unit values were less credible than those based on deflation using prices, and analysis of weights that follows refers only to the second set of weights. The SB series shown in Table 3 is based on the second set of weights, but a series based on the first set of weights is available on request.⁵

Analysis of Monthly Weights

Table 1 shows the distribution of the value weights for each vegetable expressed as a percentage of the total annual expenditure on the vegetable. Vegetables that are currently included in the Consumer Price Survey are marked with an asterisk. Bear in mind that these are the only vegetables for which constant dollar expenditures could be estimated using deflation by the appropriate CPI; for some of the other vegetables, there may be substantially more variability in monthly purchases than indicated by the available estimates.

⁵ The coefficient of variation of the Rothwell index based on the first set of weights is lower than that of the Rothwell index published here, not surprisingly since the published series is based on a set of weights showing a greater seasonal amplitude.

combinaison des estimations de 1984 et 1982 donne un profil saisonnier plus représentatif pour l'ensemble de la période d'estimation. Ces 17 centres urbains regroupent la très grande partie de la population cible de l'IPC. Les données de l'enquête sur les dépenses alimentaires de 1978 n'ont pas été incorporées dans les estimations combinées.

Pour tous les légumes, on a calculé les pondérations en valeur mensuelles en multipliant les quantités mensuelles achetées par les prix moyens de l'année de base 1982, où les quantités achetées sont des estimations combinées des enquêtes sur les dépenses alimentaires des familles de 1982 et 1984. Pour les neuf catégories dont les prix ont été relevés, et qui représentaient 72.5% des dépenses de 1982 en légumes frais, on a calculé également les pondérations en valeur en déflant les dépenses pour chaque mois par le nombre-indice de prix correspondant et en calculant au prorata les valeurs en dollars constants ainsi obtenues pour obtenir les dépenses annuelles de 1982 par sommation. La première méthode correspond à la déflation basée sur des valeurs unitaires, la deuxième à la déflation basée sur des prix.

La comparaison des pondérations calculées grâce aux deux méthodes révèle que pour chacun des neuf légumes, les pondérations calculées selon la deuxième méthode se caractérisent par une amplitude plus forte que celles calculées par la première. Le mois d'achat le plus fort a une importance relative sensiblement plus grande en termes du total des achats annuels, pour l'ensemble des pondérations qui utilisent l'IPC approprié comme déflateur.

Ces résultats ne sont pas surprenants, puisqu'en général les produits frais de meilleure qualité sont vendus au cours des mois de saison active de l'année, et que les produits de qualité inférieure prennent une part plus importante du marché hors saison. Un déflateur de valeurs unitaires va donc probablement sous-déflater les achats des mois hors saison et sur-déflater les achats des mois de saison active, ce qui donnera des pondérations mensuelles en valeur qui ne sont pas aussi saisonnières qu'elles devraient l'être.

Dans l'ensemble, il apparaît que les pondérations qui correspondent à la déflation basée sur des valeurs unitaires soient moins crédibles que celles dérivées de la déflation basées sur les prix et l'analyse des pondérations qui suit ne se rapporte qu'à ce deuxième ensemble de pondérations. La série PS du tableau 3 utilise le deuxième ensemble de pondérations, mais on peut obtenir sur demande une série utilisant le premier ensemble de pondérations⁵.

Analyse des pondérations mensuelles

Le tableau 1 présente la répartition des pondérations en valeur pour chaque légume comme un pourcentage des dépenses annuelles totales au titre de celui-ci. Les légumes qui font actuellement partie de l'enquête sur les prix à la consommation sont indiqués par un astérisque. Il ne faut pas oublier qu'il s'agit des seuls légumes pour lesquels des dépenses en dollars constants ont pu être estimées par déflation avec l'IPC approprié. Pour certains des autres légumes, la variabilité pourrait être sensiblement plus grande dans le cas des achats mensuels que les estimations existantes ne l'indiquent.

⁵ Le coefficient de variation de l'indice Rothwell basé sur le premier ensemble de pondérations est inférieur à celui de l'indice Rothwell publié ici, ce qui n'est pas surprenant, si l'on considère que la série publiée repose sur un ensemble de pondérations possédant une amplitude saisonnière plus grande.

The most seasonal of fresh vegetables would appear to be fresh corn.⁶ August alone accounts for nearly half of annual purchases, and August and September together account for nearly three quarters of purchases. Cauliflower is the next most seasonal: June alone accounts for over 40% of annual cauliflower purchases. Brussels sprouts, the third most seasonal vegetable, is the only fresh vegetable out of all those shown which can be considered seasonally disappearing. Table 1 shows no purchases of brussels sprouts in July and August; purchases peak in October, when about a sixth of all purchases are made.

None of these vegetables is priced in the CPI. They are all items with imputed price movements, as are beans and radishes, which are also highly seasonal. (Cucumbers, the fourth most seasonal vegetable, is a priced item.) Thus, highly seasonal commodities are underrepresented in the priced sample for fresh vegetables, as they are in most seasonal groups in the food CPI.

In some cases, the level of aggregation used in the Food Expenditure Survey is not sufficient to reveal seasonal patterns that exist for more finely defined categories. For example, the very tame seasonal movement of dry onions, which dominates the onions group, conceals the much more pronounced seasonal patterns of green onions and shallots. The same is true for the three miscellaneous groups listed at the bottom of the table, although purchases of other root vegetables (including sweet potatoes) show a strong seasonal movement in spite of aggregation.

The three most important fresh vegetables in terms of expenditure are potatoes, tomatoes and lettuce, in that order. None of them is highly seasonal but each has a certain seasonal pattern, with purchases of potatoes peaking in October, tomatoes in September and lettuce in July. Purchases of potatoes are at their lowest in June, tomatoes in February and lettuce in January.

Table 2 shows the value weights for fresh vegetables expressed as percentages of total expenditures for each. These are the weights that are actually used to calculate the SB index for fresh vegetables. They correspond to formula (6) in the preceding section.

These weights do not show as much variability as the weights in Table 1. This is largely because most fresh vegetables have similar seasonal patterns. Nevertheless, there are some interesting relationships to be seen in Table 2.

Although potatoes is the most important vegetable in terms of the annual basket, it is not the most important vegetable in terms of the monthly baskets for May to September, and in two of these months it ranks only fourth in importance. Tomatoes is the most important vegetable in four of these five baskets, and lettuce in the most important vegetable in the fifth basket, for July. Note that lettuce, the third most important vegetable in the annual basket, is only the sixth most important vegetable in the baskets for the months of the last quarter.

Il semble que le légume frais le plus saisonnier soit le maïs frais⁶. Le mois d'août à lui seul représente près de la moitié des achats annuels, et août et septembre pris ensemble représentent près des trois quarts des achats. Le chou-fleur vient ensuite, et le mois de juin représente quelque 40% des achats annuels. Les choux de bruxelles viennent au troisième rang, et sont le seul légume frais de tous ceux indiqués que l'on peut considérer comme étant consommé de façon saisonnière. Le tableau 1 ne révèle aucun achat de choux de Bruxelles en juillet et en août, les achats passant par un sommet en octobre, mois au cours duquel le sixième environ de tous les achats sont faits.

Le prix d'aucun de ces légumes n'est relevé pour l'IPC. Il s'agit tous de produits dont les mouvements de prix sont imputés, comme les haricots et les radis, qui sont également très saisonniers. (Les concombres, qui sont le quatrième légume le plus saisonnier, font l'objet d'un relevé de prix.) Par conséquent, les produits hautement saisonniers sont sous-représentés dans l'échantillon des prix des légumes frais, comme ils le sont dans la plupart des groupes saisonniers de l'IPC des aliments.

Parfois, le niveau d'agrégation utilisé dans l'enquête sur les dépenses alimentaires n'est pas suffisant pour dégager les mouvements saisonniers qui existent dans le cas de catégories plus finement définies. Ainsi, le mouvement saisonnier très faible des oignons secs, qui dominent le groupe des oignons, dissimule les mouvements saisonniers beaucoup plus prononcés des oignons verts et des échalotes. La même chose s'observe pour les trois groupes divers énumérés au bas du tableau, bien que l'achat d'autres légumes-racines (y compris les pommes de terre douces) suivent un fort mouvement saisonnier en dépit de l'agrégation.

Les trois principaux légumes frais en termes de dépenses sont, dans l'ordre, les pommes de terre, les tomates et la laitue. Aucun de ces légumes n'est hautement saisonnier, mais chacun suit un certain mouvement saisonnier, les achats de pommes de terre passant par un sommet en octobre, ceux de tomates, en septembre, et ceux de laitue, en juillet. Les achats de pommes de terre passent par un creux en juin, ceux de tomates, en février, et ceux de laitue, en janvier.

Le tableau 2 présente les pondérations en valeur des légumes frais exprimés en pourcentage du total des dépenses pour chaque mois. Il s'agit des pondérations qui servent au calcul réel de l'indice PS des légumes frais, et elles correspondent à la formule 6 de la section précédente.

Ces pondérations ne se caractérisent pas par une variabilité aussi grande que celles du tableau 1. Ceci s'explique principalement par le fait que la plupart des légumes frais ont des mouvements saisonniers semblables. Néanmoins, le tableau 2 permet de dégager quelques relations intéressantes.

Bien que les pommes de terre soient le légume le plus important dans le panier annuel, ce n'est pas le légume le plus important en termes des paniers mensuels pour la période mai-septembre, et au cours de deux de ces mois, il se classe au quatrième rang seulement. Les tomates sont le principal légume pour quatre de ces cinq paniers et la laitue, pour le cinquième, en juillet. Il est à noter que la laitue, qui est le troisième légume en importance du panier annuel, n'est que le sixième en importance des paniers des mois du dernier trimestre.

⁶ The rankings of the seasonality of the vegetable groups is based on the square of the coefficient of variation of each vegetable's monthly value weights. This statistic can assume values between zero, if all 12 monthly expenditures take the same value, and 11, if the monthly value for a single month equals the annual value and all other months take zero values.

⁶ Le classement de la saisonnalité des groupes de légumes repose sur le carré du coefficient de variation des pondérations mensuelles en valeur de chaque légume. Cette statistique peut prendre les valeurs comprises entre zéro, si toutes les dépenses mensuelles ont la même valeur, et 11 si la valeur mensuelle d'un mois est égale à la dépense annuelle et si les valeurs pour tous les autres mois sont nulles.

Note also that cauliflower is the second most important vegetable in the July basket, corn is the third most important vegetable in the August basket and the eight most important vegetable in the September basket, green or wax beans is the eighth most important vegetable in the August basket. In addition, broccoli is the sixth or seventh most important vegetable in three of the monthly baskets. In terms of the annual basket, all of the nine most important vegetables are priced in the CPI, but in terms of the monthly baskets, the price sample does not appear to be as representative as it could be, particularly for July and August.

Analysis of Price Index Movements

The AB and SB price indexes for fresh vegetables are shown graphically in Chart 1 and in tabular form in Table 3. The AB series is calculated according to (1) and the SB series is a Rothwell index calculated according to (3). (See the section "Index Formulas".) Both series have a 1982 base period and are weighted averages of the same item indexes. For the AB series, weighting is based on 1982 annual expenditures. For the SB series, there are 12 different sets of index weights based on expenditures for each month of the year. These weights sum to the annual expenditure weights used to calculate the AB index.

The AB series is not equal to the fresh vegetables component of the official CPI, since the latter series is a chain index with a 1981 base period. However, the CPI is based on a 1982 basket from January 1985 on, so that starting in that month the monthly movement of the AB series is identical to that of the fresh vegetables CPI.

If one first examines the annual index numbers for both series it can be seen that there are considerable differences between their movements. The AB series shows fresh vegetable prices rising in 1983 and 1984, with the rate of price change more than doubling from one year to the next. In 1985, price declines wiped out much of the 1984 increase but prices once more rose strongly in 1986. The SB series shows fresh vegetable prices rising at about the same rate in 1983 and 1984. The 1985 price declines more than offset the price increases of the previous year, so that fresh vegetable prices were actually lower in 1985 than in 1983. The rate of price change in 1986 is substantially higher for the SB series than for the AB series, although both series record double-digit rates of change.

Both annual series are based on the same annual value weights. All differences between them come from differences in the movement of their annual component indexes, and these in turn reflect differences in weighting of the monthly prices for each component. The AB series are based on a simple average and the SB series on a weighted average of monthly prices.

The SB index rises faster than the AB index in 1983 because the SB cabbage and lettuce components do not show as large declines as their AB counterparts; the SB indexes for celery, lettuce and tomatoes rise faster than the corresponding AB indexes; for mushrooms and onions the AB series register decreases in 1983 while the SB series register increases.

In 1984 it is the AB index that shows the larger increase. This is due to considerably larger positive changes in the AB series for cabbage and potatoes than in the SB series, and one finds the same thing, to a lesser extent, with carrots, celery and tomatoes. Also, the AB lettuce price index does not decline as steeply in 1984 as does its SB counterpart.

Par ailleurs, le chou-fleur est le deuxième légume en importance du panier de juillet, le maïs, le troisième en importance du panier d'août, et le huitième dans le cas du panier de septembre, les haricots verts ou jaunes, le huitième légume en importance du panier d'août. De plus, les brocolis sont le septième ou le huitième légume en importance pour trois des paniers mensuels. En termes du panier annuel, le prix des neuf principaux légumes est relevé dans l'IPC, mais en termes des paniers mensuels, l'échantillon des prix ne semble pas être aussi représentatif qu'il pourrait l'être, en particulier pour juillet et août.

Analyse des mouvements des indices de prix

Les indices de prix PA et PS des légumes frais figurent au graphique 1 et au tableau 3. La série PA est calculée selon la formule (1), et la série PS, selon un indice Rothwell calculé selon la formule (3). (Voir la section "formules des indices".) Les deux séries sont sur la base 1982 et sont des moyennes pondérées des mêmes indices de produits. Pour la série PA, la pondération utilise les dépenses annuelles de 1982. Pour la série PS, il y a 12 ensembles différents de pondérations basées sur les dépenses pour chaque mois de l'année. La somme de ces pondérations donne les pondérations annuelles en valeur qui servent à calculer l'indice PA.

La série PA n'est pas égale à la composante légumes frais de l'IPC officiel, puisque cette dernière série est un indice en chaîne avec la base de 1981. Cependant, l'IPC est basé sur un panier de 1982 à compter de janvier 1985, de sorte qu'à partir de ce mois-là, le mouvement mensuel de la série PA est identique à celui de l'IPC des légumes frais.

Si l'on examine d'abord les nombres indices annuels des deux séries, on peut constater que leurs mouvements sont très différents. La série PA révèle que les prix des légumes frais ont augmenté en 1983 et en 1984, le taux de variation plus que doublant d'une année à l'autre. En 1985, la baisse des prix a effacé la plus grande partie de l'augmentation de 1984, mais les prix ont augmenté fortement de nouveau en 1986. La série PS montre que les prix des légumes frais ont augmenté à peu près au même rythme en 1983 et 1984. La baisse des prix en 1985 a plus que neutralisé les augmentations de prix de l'année précédente, de sorte que les prix des légumes frais était en fait inférieur en 1985 à ceux de 1983. Le taux de variation des prix en 1986 est sensiblement plus élevé pour la série PS que pour la série PA, bien que les deux séries enregistrent des taux de variation à deux chiffres.

Les deux séries annuelles sont basées sur les mêmes pondérations annuelles en valeur. Toutes les différences entre elles proviennent des différences dans le mouvement de leurs indices constitutifs annuels qui, à leur tour, prennent en compte les différences de pondérations des prix mensuels pour chaque composante. Les séries PA sont basées sur une moyenne simple et les séries PS, sur une moyenne pondérée des prix mensuels.

L'indice PS augmente plus rapidement que l'indice PA en 1983 parce que les composantes chou et laitue PS ne baissent pas aussi fortement que les composantes PA correspondantes; les indices PS pour le céleri, la laitue et les tomates augmentent plus fortement que les indices PA correspondants; dans le cas des champignons et des oignons, la série PA baisse en 1983, tandis que la série PS augmente.

En 1984, c'est l'indice PA qui enregistre la plus forte augmentation, en raison des variations positives beaucoup plus importantes dans la série PA pour les choux et les pommes de terre que dans la série PS, et l'on observe le même phénomène, dans une moindre mesure, pour les carottes, le céleri et les tomates. L'indice de prix de la laitue PA ne baisse pas aussi fortement en 1984 que l'indice correspondant PS.

In 1985 the AB index falls more steeply than the SB index due to sharper declines in its series for cabbages, carrots, celery, mushrooms, onions and potatoes. Moreover the AB index for cucumbers does not show as large an increase as the SB index.

Finally, in 1986 the SB index rises at a faster rate than the AB index due to larger increases registered for potatoes, cabbage and onions.

The SB annual indexes provide a better indication of annual price movements than the AB indexes by appropriately weighting prices from different months of the year. Therefore the magnitude of the differences between the appropriately annual series is somewhat seriously disconcerting as they suggest that the current official measures of annual price movements for fresh vegetables and other seasonal foods may under or overestimate price change in particular years.

This does not mean that the All-items CPI is subject to a substantial error in its annual movements, if only because of the low relative weight of fresh vegetables, or seasonal commodity groups in general, in the All-items CPI. Together, all seasonal food groups account for less than half of food purchases from stores and for less than a twelfth of All-items expenditures.

Turning to the monthly series, it can be seen that the AB and SB series again show substantial differences in movement. In seven months, the monthly percent changes of the two series differ by four percent or more. The largest single discrepancy occurs in April 1983, when the AB index rises by 9.0%, the SB index by 15.4%.

Nevertheless, there are similarities in the seasonal patterns of the two series. For both, the month with the seasonally lowest prices is September. There is no month of the calendar year that is a clearly defined peak month for prices but both the AB and SB series peak in the same month of each year (e.g., they both reach their highest levels for 1982 in February and for 1983 in June).

Table 3 shows the part of the monthly change of the SB index that is due to pure price change. (See the appendix for details on the decomposition of the monthly movement of the SB index.) For example, in February 1982 the percent change of the SB index was 23.1% of which 21.7% was pure price change. In this context, the pure price change component of the monthly change represents the price change from January to February based on a January basket. The AB series also provides a measure of pure price change, but one that is not based on a basket for either month of comparison.

Interaction between price and quantity movements accounts for the remaining 1.6% change. Although in most months the interaction effect exceeds 1% in magnitude, it rarely distorts the monthly movements of the Rothwell index to such an extent that one would form a different opinion of monthly movements from examining its movement rather than that of its pure price change component. Remaining with the February 1982 movement as an example, the 1.6% residual change component does not have the effect of making a low rate of inflation appear to be a high one, only of making what is already a high rate of inflation, based on the pure price change component, appear somewhat higher.

En 1985, l'indice PA diminue plus fortement que l'indice PS en raison de baisses plus fortes des séries pour les choux, les carottes, le céleri, les champignons, les oignons et les pommes de terre. De plus, l'indice PA des concombres n'augmente pas aussi fortement que l'indice correspondant PS.

Enfin, en 1986, l'indice PS augmente à un taux plus élevé que l'indice PA en raison des augmentations plus fortes enregistrées dans le cas des pommes de terre, des choux et des oignons.

Les indices annuels PS donnent une meilleure indication des mouvements de prix annuels que les indices PA en pondérant proprement les prix selon les différents mois de l'année. Par conséquent, l'ampleur des différences entre les séries annuelles est quelque peu surprenante, puisqu'on pourrait conclure que les mesures officielles actuelles des mouvements annuels des prix des légumes frais et des autres aliments saisonniers peuvent sous- ou sur-estimer sensiblement les variations de prix au cours de certaines années.

Ceci ne veut pas dire que l'IPC d'ensemble soit sujet à une erreur appréciable dans ses mouvements annuels, ne serait-ce qu'à cause de la pondération relative faible des légumes frais, ou des groupes de produits saisonniers en général, dans l'IPC d'ensemble. Pris ensemble, tous les groupes d'aliments saisonniers représentent moins de la moitié des achats d'aliments en magasin et moins d'un douzième des dépenses au titre de l'ensemble des articles.

S'agissant des séries mensuelles, on peut constater que les séries PA et PS enregistrent également des différences appréciables de mouvement. En sept mois, les variations mensuelles en pourcentage des deux séries diffèrent de 4% ou plus. La divergence unique la plus élevée s'observe en avril 1983, quand l'indice PA a augmenté de 9.0% et l'indice PS, de 15.4%.

Néanmoins, les mouvements saisonniers des deux séries ont des similitudes. Dans les deux cas, le mois dont les prix saisonniers sont les plus bas est septembre. Il n'y a pas de mois de l'année civile qui enregistre un sommet clairement défini pour les prix, mais les deux séries (PA et PS) passent par un sommet le même mois de chaque année (ainsi, elles atteignent leur plus haut niveau en 1982 en février, et en 1983, en juin).

Le tableau 3 montre la partie de la variation mensuelle de l'indice PS qui est due à une variation pure de prix. (Voir l'annexe pour la décomposition du mouvement mensuel de l'indice PS.) Ainsi, en février 1982, la variation en pourcentage de l'indice PS a été de 23.1%, dont 21.7% étaient une variation pure de prix. Dans ce contexte, la composante de variation pure de prix de la variation mensuelle représente la variation de prix entre janvier et février sur la base du panier de janvier. La série PA donne également une mesure de la variation de prix pure, mais une mesure qui n'est basée sur un panier pour d'aucun des deux mois faisant objet de la comparaison.

L'interaction entre les mouvements des prix et des quantités explique le 1.6% de variation restant. Bien que pour la plupart des mois l'effet d'interaction soit supérieur à 1%, il déforme rarement les mouvements mensuels de l'indice Rothwell au point que l'on devrait changer d'opinion sur les mouvements mensuels en examinant son mouvement plutôt que celui de sa composante de variation pure de prix. Si l'on reprend l'exemple du mouvement de février 1982, le 1.6% de variation résiduel n'a pas pour effet de faire apparaître élevé un taux d'inflation bas, mais simplement de faire paraître quelque peu plus élevé ce qui est déjà un taux élevé d'inflation, sur la base de la composante de variation pure de prix.

Note that there are only four months for which the monthly movement of the SB index actually differs in sign from the sign of the pure price change component. This can happen only if the interaction effect component moves in the opposite direction from that of the pure price change component and is of larger magnitude. One sees this in April 1982, January 1983, October 1985 and July 1986. Note that in the first of these months, both the AB and SB indexes show price declines, contrary to the price increase that is registered by the pure price change component. The percent changes of the SB index actually come closer to those of its pure price change component in terms of absolute discrepancies, than do those of the AB index for all months except October 1985.⁷ If the monthly movements of the SB index suffer from distortions due to its interaction effect component, the monthly movements of the AB index suffer from being unrepresentative in their weighting of the months that they measure.

It is shown in the appendix that the pure price change component in a SB index is equivalent to the monthly changes in a monthly-linked chain price index. For a commodity group like fresh vegetables where there is likely to be a strong negative correlation between monthly weight shifts and price changes, such an index is likely to exhibit upward drift. It is certainly true in this case. The seasonal chain index for fresh vegetables (not shown in Table 3) has an index level of 172.7 in June 1987, much above the level of either the AB or the SB index.

Finally, the last two columns of Table 3 show a 12-month moving average of the SB index with its percent changes. The official consumer price series of France and Luxembourg are based on such a formula, and it has recently been advocated by Professor Erwin Diewert.⁸ Note that the December value of a given year for the index is also the annual value, and this is the same annual value as for the SB index. The moving average weights used to calculate the index are given by (9) above. Note that its percent changes tend to lag those of the AB and SB indexes; because of the 12-month moving average calculation there is an average lag of five and a half months. Also, this price index is approximately a trend-cycle series, since the moving average transformation tends to eliminate irregular as well as seasonal variation in the price series.

This examination of AB and SB series is based on data collected for an AB index. If Prices Division adopted a SB approach to measuring fresh vegetable prices, we would probably wish to rethink the pricing of items in the Consumer Price Survey, possibly pricing one or two highly seasonal items that are not part of the current survey. We might also want to rethink the imputations for unpriced items, since it would be quite important to use a source series for imputation with a similar seasonal movement to that of the target item. Because the price series used in this study are less seasonal than data that might be used in

Il est à noter qu'il n'y a que quatre mois seulement au cours desquels le mouvement mensuel de l'indice PS a un signe différent de celui de la composante de variation pure de prix. Ceci peut se produire seulement si l'effet d'interaction prend la direction opposée à la variation pure de prix et s'il est d'envergure. C'est ce que l'on peut constater en avril 1982, janvier 1983, octobre 1985 et juillet 1986. Au cours du premier de ces mois, les indices PA et PS enregistrent une diminution de prix de sens opposé à l'augmentation de prix de la composante de variation pure de prix. Ces variations en pourcentage de l'indice PS se rapprochent en fait plus de celles de sa composante de variation pure de prix en termes d'écarts absolus que celles de l'indice PS pour tous les mois à l'exception d'octobre 1985. Si les mouvements mensuels de l'indice PS ont des distorsions imputables à sa composante de l'effet d'interaction, les mouvements mensuels de l'indice PA ne sont pas représentatifs dans leur pondération des mois qu'ils mesurent.

On peut constater dans l'annexe que la composante de variation pure de prix d'un indice PS équivaut aux variations mensuelles d'un indice en chaîne avec des raccordements mensuels. Pour un groupe de produits tels que les légumes frais, où il y aura probablement une forte corrélation négative entre les mouvements des pondérations mensuelles et les variations de prix, un tel indice va probablement se caractériser par un écart à la hausse. C'est certainement ce qui se produit dans ce cas-ci. L'indice en chaîne saisonnier des légumes frais (non indiqué au tableau 3) s'établit à 172.7 en juin 1987, bien au-dessus du niveau de l'indice PA ou de l'indice PS.

Enfin, les deux dernières colonnes du tableau 3 présentent une moyenne mobile sur 12 mois de l'indice PS, avec ses variations en pourcentage. Les séries officielles des prix à la consommation de la France et du Luxembourg utilisent une telle formule, et elle a été récemment mise de l'avant par le professeur Erwin Diewert.⁸ Il est à noter que la valeur de décembre d'une année donnée de l'indice est également la valeur annuelle, et que c'est la même valeur annuelle que pour l'indice PS. Les pondérations des moyennes mobiles servant à calculer l'indice sont données par la formule (9) ci-dessus. Il est à noter que les variations en pourcentage de l'indice ont tendance à être en retard sur les variations en pourcentage des indices PA et PS; en raison du calcul des moyennes mobiles sur 12 mois, il y a un retard moyen de cinq mois et demi. De plus, cet indice de prix est approximativement une série tendance-cycle, puisque la transformation en moyenne mobile a tendance à éliminer les variations irrégulières et saisonnières dans la série des prix.

Cet exemple des séries PA et PS utilise les données recueillies pour un indice PA. Si la Division des prix adoptait un indice PS pour la mesure des prix des légumes frais, nous aurions probablement à revoir le relevé des prix des articles de l'enquête sur les prix à la consommation, en relevant le prix d'un ou deux produits hautement saisonniers qui ne font pas partie de l'enquête courante. On pourrait également vouloir revoir les imputations pour les prix des produits non relevés, puisqu'il serait très important d'utiliser pour l'imputation une série originale avec un mouvement saisonnier semblable à celui de l'article visé. Comme les séries de prix utilisées dans cette étude sont moins

⁷ In October 1985, the pure price change component of the SB index is 3.2%, almost identical to the percent change of the AB index, while the percent change of the SB index is -1.1%. Large seasonal declines in the indexes for tomatoes, cucumbers and corn are responsible for this.

⁸ See W.E. Diewert, "The Treatment of Seasonality in the Cost-of-Living Index" in W.E. Diewert and Claude Montmarquette (eds.), *Price Level Measurement: Proceedings from a Conference Sponsored by Statistics Canada, Ottawa, Statistics Canada*, pp.1019-1045.

⁷ En octobre 1985, la composante de variation pure de prix de l'indice PS est 3.2%, presque identique à la variation en pourcentage de l'indice PA, alors que la variation en pourcentage de l'indice PS est -1.1%. Ceci s'explique par les fortes baisses saisonnières des indices des tomates, des concombres et du maïs.

⁸ Voir W.E. Diewert, "Le traitement de la saisonnalité dans un indice du coût de la vie" dans W.E. Diewert et Claude Montmarquette (éditeurs), *La mesure du niveau des prix: Actes du colloque tenu sous l'égide de Statistique Canada, Ottawa, Statistique Canada*, p. 1010-1045.

calculating an official SB index, the interaction effect component probably has a lower variance than it would if it were based on component indexes compiled with the construction of an SB series in mind. On the other hand, the differences between the pure price change component of the SB series and the percent changes of the AB series are also likely smaller than those one would find if both series were based on the latter, hypothetical set of component indexes.

Conclusion

Where there is strong seasonality in the purchases of commodities, an AB index cannot provide a representative measure of pure price change from year to year. In calculating annual price movements it will overweight monthly prices for commodities from their off-season months and underweight monthly prices for commodities from their in-season months. A SB index, or more specifically, a Rothwell index, is superior in that it appropriately aggregates monthly prices from different months according to monthly weights based on an estimated normal seasonal pattern of purchases.

This study showed using the example of a fresh vegetables consumer price series that the differences between AB and SB annual estimates are far from negligible. One gets a different picture of price inflation for fresh vegetables if one looks at the AB series instead of the SB series, and the SB series almost certainly comes much closer to providing the true picture.

It was shown that although a Rothwell index does not constitute a measure of pure price change, one can readily decompose its monthly movement into pure price change and interaction effect components. For most months of the fresh vegetables series, the monthly movement of the Rothwell index is not substantially different from that of its pure price change component, and in only a few months did the two measures move in opposite directions. Moreover, the AB series often showed greatly different monthly movements from those of the pure price change component. This is partly because the monthly measures of price change provided by the AB series, although undistorted by changes in the index basket, are not always representative of the months being compared.

Perhaps it is time for Prices Division once more to re-examine its approach to seasonal commodities in the CPI, especially as the present AB approach seems to have encouraged an underrepresentation of highly seasonal commodities in the consumer price sample, which must bias all of our measures of consumer price change, monthly, quarterly or annual.

saisonnnières que les données qui pourraient servir au calcul d'un indice officiel PS, la composante de l'effet d'interaction a probablement une variance plus basse que si elle était fondée sur des indices constitutifs rassemblés lors de la construction explicite d'une série PS. Par contre, les différences entre la composante de variation pure de prix de la série PS et les variations en pourcentage de la série PA sont aussi probablement inférieures à celles que l'on aurait trouvées si les deux séries étaient basées sur ce dernier ensemble hypothétique d'indices constitutifs.

Conclusion

Lorsque l'achat de produits se caractérise par une forte saisonnalité, un indice PA ne peut donner une mesure représentative de la variation pure de prix d'une année à l'autre. Lors du calcul des mouvements de prix annuels, il va sur-pondérer les prix mensuels des produits dans leurs mois hors saison et sous-pondérer les prix mensuels des produits dans leurs mois de saison active. Un indice PS, ou plus précisément, un indice Rothwell, est supérieur en ce sens qu'il agrège proprement les prix mensuels de différents mois selon des pondérations mensuelles basées sur un mouvement saisonnier normal estimé des achats.

Cette étude a montré, en prenant l'exemple d'une série de prix à la consommation des légumes frais, que les différences entre les estimations annuelles PA et PS sont loin d'être négligeables. On obtient une image différente de l'inflation pour les prix des légumes frais si l'on examine la série PA au lieu de la série PS, et cette dernière presque certainement est beaucoup plus proche de la situation réelle.

On a montré que même si un indice Rothwell ne constitue pas une mesure de la variation pure de prix, on peut facilement décomposer son mouvement mensuel en une composante de variation pure de prix et une composante d'effet d'interaction. Pour la plupart des mois des séries des légumes frais, le mouvement mensuel de l'indice Rothwell ne diffère pas sensiblement de celui de sa composante de variation pure de prix, et les deux mesures ne varient dans des directions différentes qu'au cours de quelques mois seulement. De plus, la série PA exhibe souvent des mouvements mensuels très différents de ceux de la composante de variation pure de prix, en partie parce que les mesures mensuelles de la variation de prix fournies par la série PA, bien que non déformées par les changements du panier de l'indice, ne sont pas toujours représentatives des mois faisant l'objet de la comparaison.

Peut-être la Division des prix devrait-elle revoir encore une fois son approche concernant les produits saisonniers dans l'IPC, en particulier parce que la méthode PA actuelle semble avoir encouragé une sous-représentation de produits hautement saisonniers dans l'échantillon des prix à la consommation, qui doit biaiser toutes nos mesures de la variation des prix à la consommation, qu'elles soient mensuelles, trimestrielles ou annuelles.

Appendix: The Monthly Movement of a Seasonal-Basket Index

The ratio of the index numbers of the SB series for consecutive months will be:

$$\frac{P_{y,m} q_{82,m}}{P_{y,m-1} q_{82,m-1}} \quad / \quad \frac{P_{82} q_{82,m}}{P_{82} q_{82,m-1}} \quad (A1)$$

that is, the ratio of expenditures in month m to expenditures in month $m-1$ at prices of the corresponding months in the given year, divided by the same ratio at average base year prices. The latter ratio can be thought of as a seasonal adjustment term, removing any seasonality in the purchases of the group, while preserving the seasonal price movement of the series.

If prices remain constant between two consecutive months, an index of pure price change will not register any change. But it can be seen from (A1) that if for every commodity

$$P_{y,m} = P_{y,m-1},$$

then the ratio of index numbers for consecutive months will be:

$$\frac{P_{y,m} q_{82,m}}{P_{y,m} q_{82,m-1}} \quad / \quad \frac{P_{82} q_{82,m}}{P_{82} q_{82,m-1}}$$

which in general will not equal one.

Using (5), the monthly percent change of a Rothwell index can be decomposed as follows:

$$\begin{aligned} P_{y,m/82} - P_{y,m-1/82} &= W_m^j P_{y,m/82}^j - W_{m-1}^j P_{y,m-1/82}^j \\ &= W_{m-1}^j (P_{y,m/82}^j - P_{y,m-1/82}^j) \\ &\quad + (W_m^j - W_{m-1}^j) P_{y,m/82}^j \end{aligned}$$

where the first term represents pure price change and the second term the interaction of price change and weight shifts, hereafter the interaction effect.

Since the sum of the index weights for any month equals one according to (6), the elements of the second term in (A2) tend to cancel each other out, and would do so entirely, summing to zero, if they were not weighted by the corresponding component index numbers for the given months. The importance of the interaction effect is thus a function of the variance of the component price index numbers.

Annexe: Le mouvement mensuel de l'indice fondé sur un panier saisonnier

Le ratio des nombres-indices de la série PS pour des mois consécutifs est donné par la formule:

c'est-à-dire le rapport des dépenses du mois m aux dépenses du mois $m-1$ exprimées en prix des mois correspondants de l'année donnée, divisé par le même quotient exprimé en prix moyens de l'année de base. Ce dernier quotient pourrait être considéré comme un terme de désaisonnalisation, qui élimine toute saisonnalité des achats du groupe tout en conservant le mouvement de prix saisonnier de la série.

Si les prix demeurent constants entre deux mois consécutifs, un indice de la variation pure de prix ne subira aucun changement. Toutefois, à partir de la formule A1, on peut constater que si pour chaque produit

alors le ratio des nombres indices pour les mois consécutifs sera:

qui, en général, sera différent de un.

En utilisant (5), la variation mensuelle en pourcentage d'un indice Rothwell peut être décomposée ainsi:

où le premier terme représente la variation pure de prix, et le deuxième, l'interaction de la variation de prix et des changements de pondérations, ce que l'on appelle effet d'interaction.

Comme la somme des pondérations de l'indice pour un mois quelconque est égale à un selon (6), les éléments du deuxième terme dans (A2) ont tendance à s'annuler, et le feraient totalement en donnant la somme égale à zéro, s'ils n'étaient pas pondérés par les correspondants nombres-indices constitutifs pour le mois donné. L'importance de l'effet d'interaction est donc une fonction de la variance des nombres-indices de prix constitutifs.

When all component series have the same given month value, the interaction effect will be nil. The larger the differences in index levels, the larger the likely magnitude, positive or negative, of the interaction effect. One important implication of this is that the average magnitude of the interaction effect for a SB aggregate will be influenced by the frequency and timeliness of updating of the index baskets, since the latter will have an effect on the dispersion of the values of component index numbers.

Dividing the left and right hand sides of (A2) by the previous month index number, one can re-express the decomposition of monthly change in the SB index as a percent change (with the appropriate scale adjustment). If one substitutes (6) and (7) into (A2) one obtains the following expression for the pure price change component:

$$\left(\frac{P_{y,m} - P_{y,m-1}}{P_{y,m-1}} \right) \frac{q_{82,m-1}}{q_{82,m-1}}$$

In this form it can be seen that the pure price change component is equivalent to the percent change of a monthly-linked chain price index, whose monthly links are calculated using the monthly basket corresponding to the base month (e.g. for June-to-July comparisons, a fixed-basket index is calculated using the June basket).

One might wonder if such a seasonal chain index might not be a superior alternative to the Rothwell index itself, since it does provide a measure of pure price change for monthly comparisons which the Rothwell index does not. The answer, unfortunately, is no, since a seasonal chain index would not provide a measure of pure price change for annual comparisons or 12-month changes. Also, if there is a high correlation between monthly price changes and monthly weight shifts, there will be a pronounced tendency for such an index to drift away from the level of a corresponding direct index. Even in the special case where each component series has price movements that fluctuate seasonally around a stable price level, a seasonal chain index will have a strong upward (downward) trend if there is negative (positive) correlation between monthly weight and price changes.

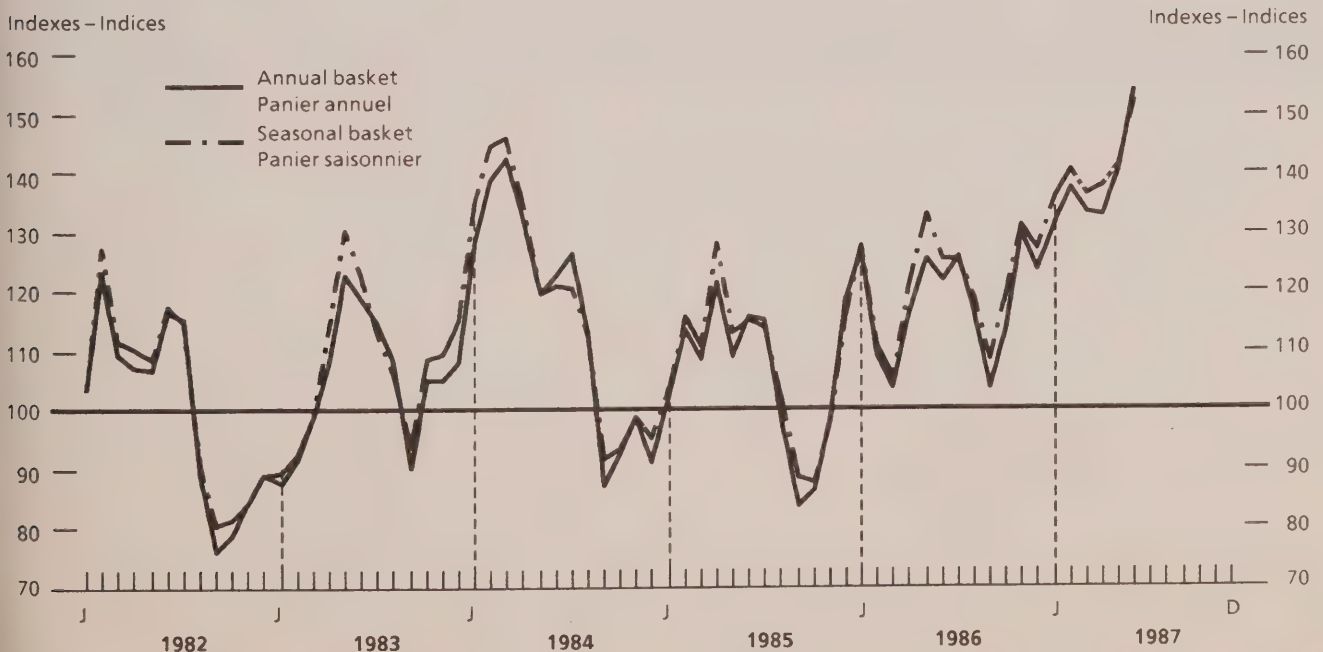

Lorsque toutes les séries constitutives ont la même valeur mensuelle donnée, l'effet d'interaction sera nul. Plus les différences des niveaux d'indice seront grandes, et plus la grandeur probable, positive ou négative, de l'effet d'interaction sera élevée. Une importante conséquence en est que la grandeur moyenne de l'effet d'interaction d'un agrégat PS sera influencée par la fréquence et la promptitude des mises à jour des paniers de l'indice, puisque ces derniers auront un effet sur la dispersion des valeurs des nombres-indices constitutifs.

En divisant les côtés gauche et droit de (A2) par le nombre indice du mois précédent, on peut récrire la décomposition de la variation mensuelle de l'indice PS comme une variation en pourcentage (avec les changements d'échelle appropriés). Si l'on substitue (6) et (7) dans (A2), on obtient l'expression suivante pour la composante de variation pure de prix:

Sous cette forme, on peut constater que la variation pure de prix équivaut à la variation en pourcentage d'un indice de prix en chaîne avec des raccordements mensuels, dont les raccords mensuels sont calculés à partir du panier mensuel correspondant au mois civil du mois de base (ainsi, pour les comparaisons juin-juillet, on calcule un indice à panier fixe fondé sur le panier de juin).

On pourrait se demander si un tel indice en chaîne saisonnier ne serait pas une meilleure solution de remplacement à l'indice Rothwell lui-même, puisqu'il donne une mesure de la variation pure de prix pour les comparaisons mensuelles, ce que l'indice Rothwell ne fait pas. La réponse est malheureusement non, puisqu'un indice en chaîne saisonnier ne donnerait pas une mesure de la variation pure de prix pour des comparaisons annuelles ou pour des variations sur 12 mois. De plus, s'il existe une corrélation élevée entre les variations mensuelles de prix et les mouvements des pondérations mensuelles, un tel indice aurait une tendance marquée à s'écarter du niveau de l'indice direct correspondant. Même dans le cas particulier où chaque série constitutive aurait des mouvements de prix qui fluctueraient de façon saisonnière autour d'un niveau de prix stable, un indice en chaîne saisonnier aurait une forte tendance à la hausse (à la baisse) s'il y avait une corrélation négative (positive) entre les variations mensuelles de poids et de prix.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices inter-villes portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Dés IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation	8.61	8.25
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.39	5.45

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuable à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 2 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures**, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 2 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, n° 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: **Family Food Expenditure, 1982**, Catalogue 62-554; and **Family Expenditure in Canada, 1982**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-9607).

se' fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: **Dépenses alimentaires des familles au Canada, 1982**, n° 62-554 au catalogue; et **Dépenses des familles au Canada, 1982**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents $\times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 3) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents $\times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 3) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

(1) Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. La durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

City Average Retail Prices - Item Specifications

Detailed Specification

Beef

Round steak. Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

Prime rib roast. Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

Prix de Détail Moyens par Ville - Spécifications des Articles

Spécification détaillée

Boeuf

Bifteck dans la ronde. Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

Rôti de côtes de choix. Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Rôti de palette (non désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

Boeuf haché régulier. Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 450 g.

Poultry

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

Fish

Cod filets. Generally available manufacturers' brands (store brands excluded), frozen, 454 g package.

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 213 g tin.

Dairy Products

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 L.

Milk 2%. Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 L.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, rôti désossé, 1 kg.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

Bacon. Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 450 g.

Volaille

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

Poisson

Filets de morue. Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 213 g.

Produits laitiers

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 L (en carton), non consigné.

Lait 2%. Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 L (en carton), non consigné.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1 kg cardboard package, may be pasteurized or vitaminized.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 mL can.

Eggs. Large eggs, Grade A, in a carton of 1 dozen.

Bakery and Cereal Products

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Bread. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

Macaroni. Generally available manufacturers' brands (store brands excluded) dry, tubular shape, straight or elbow (ready-cut) macaroni. May be vitaminized, 500 g package.

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

Fruit

Bananas. First grade, price per kg.

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

Oranges. California, medium size (138 or 113) price per kg.

Orange juice. Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 L.

Lait en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1 kg, peut être pasteurisé ou vitaminé.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 mL.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12.

Céréales et produits de boulangerie

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

Macaroni. Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, droit ou courbé (coupé). Peut-être vitaminé, paquet de 500 g.

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

Flocons de maïs. Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

Fruits

Bananes. Première qualité, vendues au kg.

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

Oranges. De Californie, grosseur moyenne (138 ou 113) prix au kg.

Jus d'orange. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 L.

Vegetables

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages price per kg.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

Lettuce. Fresh head, green, good quality, average size head, price per kg.

Mushrooms. Cultivated, fresh, domestic or imported, Canada No. 1, 400 g.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

Potatoes. Table potatoes, white, Canada No. 1, 4.54 kg.

French fried potatoes. Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg poly bag.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 mL.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 mL.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 L.

Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kg.

Beverages

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 227 g.

Légumes

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

Champignons. Cultivés, frais, domestiques ou importés, catégorie Canada n° 1, 400 g.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada n° 1, sac de 4.54 kg.

Pommes de terre frites. Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg en matière plastique.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 mL.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 mL.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 L.

Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

Boissons

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 227 g.

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 72 two-cup paper bags (227 g).

Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

Miscellaneous Groceries

Tomato ketchup. Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 L bottle.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 mL.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 mL.

Peanut butter. Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 mL.

Supplies and Personal Care Items

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 L.

Facial tissue. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

Bathroom tissue. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, two ply sheets. Units of four, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 72 sachets de papier pour deux tasses chacun (227 g).

Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

Articles divers d'épicerie

Ketchup aux tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 L.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 mL.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 mL.

Beurre d'arachides. Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 mL.

Fournitures et articles de soins personnels

Détergent synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins); tout usage, cristallisé ou en poudre, boîte de 6 L.

Papier mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, double épaisseur. Paquets de quatre, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 mL.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in one or multiple units (up to four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 mL.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en paquet d'un ou plusieurs pains (jusqu'à quatre unités). Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Tabacs

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 23 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 15 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 23 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

(1) Voir tableau 15 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 23

- (2) The weights shown are rounded 1982 weights as contained in the report *The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures* (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans *Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982* (hors-série), n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 8 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada.

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 8 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Dés données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordi-nolingué et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Harold Harnarine**, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

6. Comparaisons internationales des prix de détail	127

HIGHLIGHTS

Consumer Price Behaviour

Third Quarter, 1987

Trends in the All-items Index

In seasonally adjusted terms, the All-items Consumer Price Index (CPI) for Canada increased 0.9% in the third quarter compared to a rise of 1.2% noted in the second quarter. The third quarter started with a sharp monthly rise of 0.7% reported in July after which the CPI registered a moderate 0.1% increase in both August and September. By contrast, the monthly increases in the second quarter followed a smoother course (April 0.3%; May 0.5%; June 0.4%).

The deceleration in seasonally adjusted movements indicated by the CPI was underscored by a noticeable drop in the rate of increase for the unadjusted index which rose 0.8% between June and September compared to a rise of 1.3% between March and June. However, in terms of the average of the year-to-year changes, the average for the latest period (July, August and September) was identical to that of the previous period (April, May and June). Thus the trend in the CPI during the third quarter could be characterized as stable or slightly decelerating.

Major Contributors to the Third Quarter Change

As noted above, the All-items Consumer Price Index advanced by 0.8% (not adjusted for seasonality) between June and September. The rise in this index was explained by an increase of 1.4% in the All-items excluding Food index and a decline of 1.3% in the Food index.

In terms of major component indexes, a large part of the latest increase in the CPI was due to a rise of 1.0% in the Housing index followed closely, in rank, by an increase of 2.2% in the Transportation index. Some noticeable upward pressure on the CPI also originated from increases in the Clothing index (1.8%) and the Recreation, Reading and Education index (1.4%). A significant dampening effect on the overall result came from the 1.3% decline in the Food index.

The 1.0% increase in the Housing index was largely due to higher charges for rented and owned accommodation. In the latter case, higher prices of new houses, mortgage interest costs and house maintenance and repair charges were most pronounced. The Housing Index was pushed up further by

POINTS SAILLANTS

Comportement des prix à la consommation

Troisième trimestre de 1987

Tendances de l'indice d'ensemble

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation (IPC) pour le Canada a augmenté de 0.9% au troisième trimestre comparativement à une hausse de 1.2% au deuxième trimestre. Au troisième trimestre, on enregistre une forte augmentation mensuelle de 0.7% en juillet et des progressions modérées de 0.1% en août et en septembre. Par contre, les augmentations mensuelles au deuxième trimestre étaient moins irrégulières (avril 0.3%; mai 0.5%; juin 0.4%).

Le ralentissement des mouvements désaisonnalisés de l'IPC est mis évidence par un repli appréciable du taux d'augmentation de l'indice non-désaisonnalisé, qui a augmenté de 0.8% entre juin et septembre, comparativement à une progression de 1.3% entre mars et juin. Par contre, en termes de la moyenne des augmentations sur 12 mois, la moyenne pour la dernière période (juillet, août et septembre) est identique à celle de la période précédente (avril, mai et juin). On peut donc dire que la tendance de l'IPC au troisième trimestre est stable ou accuse un léger ralentissement.

Principaux facteurs de la variation du troisième trimestre

Comme on l'a déjà dit, l'indice d'ensemble des prix à la consommation a augmenté de 0.8% (avant désaisonnalisation) entre juin et septembre. La hausse de l'indice d'ensemble s'explique par un accroissement de 1.4% de l'indice d'ensemble sans les aliments et une baisse de 1.3% de l'indice des aliments.

S'agissant des indices des principales composantes, une partie importante de la dernière augmentation de l'IPC s'explique par une hausse de 1.0% de l'indice de l'habitation, que suit de près l'indice des transports (2.2%). Les indices de l'habillement (1.8%) et des loisirs, lecture et formation (1.4%) ont aussi exercé une pression à la hausse sensible. Le recul de 1.3% de l'indice des aliments a par contre freiné de façon appréciable l'augmentation générale.

L'augmentation de 1.0% de l'indice de l'habitation s'explique principalement par le relèvement des coûts des logements en location et en propriété. Dans ce dernier cas, l'augmentation du prix des maisons neuves, des intérêts hypothécaires et des frais d'entretien et de réparation des maisons a été la plus forte. L'indice de

advances in prices relating to traveller accommodation, child care services and fuel oil. Some moderating influence resulted from lower prices for piped gas and for furniture.

Most of the increase in the Transportation index came from higher air fares and gasoline prices. In addition, automobile rentals, prices of new cars and automobile insurance premiums also exerted some degree of upward influence on the index.

The Clothing Index posted a relatively sharp 1.8% increase between June and September. The impact resulting from the increase in women's wear prices was noticeably greater than that coming from increases in men's wear prices. Advances in the prices of footwear and selected clothing services also added to the overall advance noted in this period.

Annual increases in tuition fees related to post-secondary education and higher prices for reading materials contributed significantly to the latest 1.4% rise in the Recreation, Reading and Education index. The index also rose due to increases in cablevision charges and in the prices of selected recreational equipment.

Moderate amounts of upward pressure on the rise in the All-items index between June and September were due to advances of 1.4% in the Health and Personal Care index and 0.7% in the Tobacco Products and Alcohol Beverages index. The former was affected by higher prices for prescribed medicines and selected personal care supplies. The latter's increase resulted from higher prices for cigarettes and selected alcoholic beverages.

The decline in the Food index was composed of a fall of 2.2% in the index for Food Purchased from Stores and a rise of 1.2% in the index for Food Purchased from Restaurants. The decline in the index for Food Purchased from Stores was attributable, in large measure, to seasonal declines in the prices of fresh fruit (down 9.6%) and fresh vegetables (down 32.0%). Other price declines were noted for beef, pork, coffee and tea. At the same time, the overall impact of these largely seasonal price declines was offset by higher prices observed for cured meat, prepared and ready cooked meat, fish, dairy products, bakery products and soft drinks.

l'habitation a été de plus relevé par la hausse des prix de l'hébergement des voyageurs, des services de soins de santé pour enfants et du mazout. La baisse du prix du gaz naturel et des meubles a exercé une certaine influence modératrice.

La plus grande partie de l'augmentation de l'indice des transports est imputable au relèvement des tarifs aériens et du prix de l'essence. De plus la location de véhicules automobiles, le prix des voitures neuves et les primes d'assurance automobiles ont aussi exercé une certaine pression à la hausse sur l'indice.

L'indice de l'habillement accuse une augmentation relativement forte de 1.8% entre juin et septembre. L'augmentation du prix des vêtements pour femmes a eu un impact sensiblement plus fort que celui des vêtements pour hommes. L'augmentation de l'indice au cours de cette période s'explique également par l'accroissement du prix des chaussures et de certains services vestimentaires.

L'augmentation annuelle des frais de scolarité se rattachant au secteur postsecondaire et la hausse du prix du matériel de lecture expliquent dans une large mesure la progression de 1.4% de l'indice des loisirs, de la lecture et de la formation. La majoration des frais de télédistribution et la hausse du prix de certains matériels de loisir explique également cette progression.

Une certaine partie de la pression à la hausse sur l'indice d'ensemble entre juin et septembre s'explique par les augmentations de l'indice de la santé et des soins personnels (1.4%) et de l'indice des produits du tabac et des boissons alcoolisées (0.7%). Le premier indice a été touché par l'augmentation du prix des médicaments sur ordonnance et de certains articles de soins personnels. La hausse du prix des cigarettes et de certaines boissons alcoolisées explique la croissance dans le deuxième cas.

Le recul de l'indice des aliments est le résultat d'une baisse de 2.2% de l'indice des aliments achetés au magasin et d'une augmentation de 1.2% de l'indice des aliments achetés au restaurant. La diminution de l'indice des aliments achetés au magasin s'explique dans une large mesure par les baisses saisonnières du prix des fruits frais (baisse de 9.6%) et des légumes frais (baisse de 32.0%). On relève également une diminution du prix du boeuf, du porc, du café et du thé. En même temps, l'impact général de ces diminutions de prix, essentiellement saisonnières, est neutralisé par une augmentation de ceux de la viande de salaison, des préparations à base de viande et viandes cuites, du poisson, des produits laitiers, des produits de boulangerie et des boissons gazeuses.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part V.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie V.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

(1) For explanatory notes and detailed item specification see Appendix 4.

(2) Blanks appear on this table where the quality and (or) quantity of the prices were insufficient to produce a good average.

(3) Whitehorse is not included in weighted city averages.

(4) Tenderloin removed priced in Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Whitehorse.

(5) Chicoutimi (450 g).

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation	8.61	8.25
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.39	5.45

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reagggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs - Service Bulletin** (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures**, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie - Bulletin de service** (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, n° 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: **Family Food Expenditure, 1982**, Catalogue 62-554; and **Family Expenditure in Canada, 1982**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-9607).

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: **Dépenses alimentaires des familles au Canada, 1982**, n° 62-554 au catalogue; et **Dépenses des familles au Canada, 1982**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

(1) Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. La durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

City Average Retail Prices - Item Specifications

Detailed Specification

Beef

Round steak. Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

Prime rib roast. Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

Prix de Détail Moyens par Ville - Spécifications des Articles

Spécification détaillée

Boeuf

Bifteck dans la ronde. Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

Rôti de côtes de choix. Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Rôti de palette (non désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

Boeuf haché régulier. Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 450 g.

Poultry

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

Fish

Cod fillets. Generally available manufacturers' brands (store brands excluded), frozen, 454 g package.

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 213 g tin.

Dairy Products

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 L.

Milk 2%. Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 L.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, rôti désossé, 1 kg.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

Bacon. Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flank, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 450 g.

Volaille

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

Poisson

Filets de morue. Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 213 g.

Produits laitiers

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 L (en carton), non consigné.

Lait 2%. Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 L (en carton), non consigné.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1 kg cardboard package, may be pasteurized or vitaminized.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 mL can.

Eggs. Large eggs, Grade A, in a carton of 1 dozen.

Bakery and Cereal Products

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Bread. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

Macaroni. Generally available manufacturers' brands (store brands excluded) dry, tubular shape, straight or elbow (ready-cut) macaroni. May be vitaminized, 500 g package.

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

Fruit

Bananas. First grade, price per kg.

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

Oranges. California, medium size (138 or 113) price per kg.

Orange juice. Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 L.

Lait en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1 kg, peut être pasteurisé ou vitaminé.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 mL.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12.

Céréales et produits de boulangerie

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

Macaroni. Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, droit ou courbé (coupé). Peut-être vitaminé, paquet de 500 g.

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

Flocons de maïs. Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

Fruits

Bananas. Première qualité, vendues au kg.

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

Oranges. De Californie, grosseur moyenne (138 ou 113) prix au kg.

Jus d'orange. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 L.

Vegetables

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages price per kg.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

Lettuce. Fresh head, green, good quality, average size head, price per kg.

Mushrooms. Cultivated, fresh, domestic or imported, Canada No. 1, 400 g.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

Potatoes. Table potatoes, white, Canada No. 1, 4.54 kg.

French fried potatoes. Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg poly bag.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 mL.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 mL.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 L.

Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kg.

Beverages

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 227 g.

Légumes

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

Champignons. Cultivés, frais, domestiques ou importés, catégorie Canada n° 1, 400 g.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada n° 1, sac de 4.54 kg.

Pommes de terre frites. Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg en matière plastique.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 mL.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 mL.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 L.

Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

Boissons

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 227 g.

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 72 two-cup paper bags (227 g).

Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

Miscellaneous Groceries

Tomato ketchup. Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 L bottle.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 mL.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 mL.

Peanut butter. Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 mL.

Supplies and Personal Care Items

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 L.

Facial tissue. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

Bathroom tissue. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, two ply sheets. Units of four, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 72 sachets de papier pour deux tasses chacun (227 g).

Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

Articles divers d'épicerie

Ketchup aux tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 L.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 mL.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 mL.

Beurre d'arachides. Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 mL.

Fournitures et articles de soins personnels

Détergent synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 L.

Papier mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, double épaisseur. Paquets de quatre, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 mL.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in one or multiple units (up to four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

Average Retail Prices for Gasoline

Tables 15 through 20 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 21 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 21 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 mL.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en paquet d'un ou plusieurs pains (jusqu'à quatre unités). Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Tabacs

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

Prix de détail moyens de l'essence

Les tableaux 15 à 20 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 21 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 21 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 22 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.⁽¹⁾

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 14 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 22 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville⁽¹⁾ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

(1) Voir tableau 14 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Footnotes for Table 22

- (2) The weights shown are rounded 1982 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures (Occasional)**, Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

Notes pour le tableau 22

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982 (hors-série)**, n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8

Domestic help (depending on location)	2-8

indices de poste concernant le personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolinique et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- † revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Cansim Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Harold Harnarine**, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- † nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division Cansim, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

HIGHLIGHTS

Consumer Price Behaviour

Fourth Quarter, 1987

Trends in the All-items Index

The All-items Consumer Price Index (CPI) rose by 1.0% (seasonally adjusted) in the fourth quarter 1987. This increase was marginally higher than the rise of 0.9% observed in the third quarter. Half of the seasonally adjusted increase in the CPI in the fourth quarter was concentrated in the month of November. In the third quarter the bulk of the increase was registered in the month of July.

The slight acceleration noted in the fourth quarter in seasonally adjusted terms was confirmed by the non-adjusted change as well. Between September and December the CPI rose by 0.9% (unadjusted) compared to the 0.8% increase observed between June and September. The signals derived from a longer-term annual measure appear to contradict this trend. The average for the year to year increases for the months of October, November and December (4.2%) was noticeably lower than the average of similar measures for the months of July, August and September (4.6%). According to this annual measure the increase in the CPI in the fourth quarter was weaker than that seen in the third quarter.

Major Contributors to the Fourth Quarter Change

The All-items index, as noted before, advanced by 0.9% (unadjusted for seasonality) between September and December 1987. Increases of 0.5% in the Food index and 0.8% in the index¹ for All-items excluding Food combined in producing the latest change.

Over half of the latest quarterly increase in the All-items index was due to a 1.2% rise in the Housing index. Increases in the Transportation index (0.5%), in the Food index (0.5%) and the Recreation, Reading and Education index (1.0%) each explained slightly over ten percent of the change in the All-items index. The rise in the other three major component indexes imparted a moderate upward pressure on the latest increase.

The advance of 1.2% in the Housing index in the fourth quarter was largely attributable to a rise of 2.2% in the index for Owned Accommodation. An annual increase of 6.7%

¹ Due to rounding, the change in the All-items falls outside the bounds of its components.

FAITS SAILLANTS

Comportement des prix à la consommation

Quatrième trimestre de 1987

Tendances de l'indice d'ensemble

Au quatrième trimestre de 1987, l'indice d'ensemble des prix à la consommation (IPC) a augmenté de 1.0% (après désaisonnalisation). Cette hausse est quelque peu supérieure à celle de 0.9% observée au troisième trimestre. La moitié de l'augmentation désaisonnalisée de l'IPC au quatrième trimestre a été enregistrée au mois de novembre. Au troisième trimestre, la plus grande partie de l'augmentation avait été relevée en juillet.

Le léger raffermissement (après désaisonnalisation) observé au quatrième trimestre est confirmé aussi par l'augmentation non désaisonnalisée. De septembre à décembre, l'IPC a affiché une hausse (non désaisonnalisée) de 0.9%, comparativement à l'augmentation de 0.8% enregistrée de juin à septembre. Les indications obtenues au moyen d'une mesure annuelle à plus long terme semblent contredire cette tendance. En ce qui concerne la moyenne des augmentations sur douze mois, la moyenne pour les mois d'octobre, de novembre et de décembre (4.2%) était sensiblement inférieure à la moyenne des mesures similaires pour les mois de juillet, d'août et de septembre (4.6%). Selon cette mesure annuelle, l'augmentation de l'IPC au quatrième trimestre était inférieure à celle calculée pour le troisième trimestre.

Principaux facteurs de la variation du quatrième trimestre

Comme on l'a déjà dit, l'indice d'ensemble a augmenté de 0.9% (avant désaisonnalisation) entre septembre et décembre 1987. Cette hausse s'explique par l'accroissement de 0.5% de l'indice des aliments accompagnée d'une augmentation de 0.8% de l'indice¹ d'ensemble sans les aliments.

Plus de la moitié de la dernière augmentation trimestrielle de l'IPC s'explique par une hausse de 1.2% de l'indice de l'habitation. Un peu plus de dix pour cent de la croissance de l'indice d'ensemble est imputable aux hausses de l'indice des transports (0.5%), de l'indice des aliments (0.5%) et de l'indice des loisirs, lecture et formation (1.0%). L'accroissement des trois autres indices des composantes principales a aussi exercé une pression à la hausse modérée.

L'augmentation de 1.2% de l'indice de l'habitation au quatrième trimestre s'explique principalement par le relèvement de 2.2% de l'indice du logement en propriété. Une augmentation annuelle de 6.7% des impôts fonciers,

¹ Les chiffres ayant été arrondis, l'indice d'ensemble dépasse la somme de ses composantes.

in property taxes assisted by advances in mortgage interest costs and new house prices contributed substantially to home-ownership charges. Also contributing an upward impact was a 0.9% increase in the index for Rented Accommodation. Less conspicuous, but relatively significant increases were also observed in the prices for household furnishings, fuel oil, piped gas and selected paper, plastic and foil products. Higher child care charges and pet care expenses also contributed to the advances. At the same time a noticeable moderation was exerted by a seasonal decline of 5.4% in the Traveller Accommodation index.

The Transportation index advanced by 0.6% in the fourth quarter as a combined result of an increase of 1.5% in the Private Transportation index and a decline of 3.7% in the Public Transportation index. In the Private Transportation index, most of the increase was due to higher prices for new automobiles. Higher vehicle maintenance and repair charges and drivers' licence fees contributed to a lesser extent to the increase. Lower vehicle rental and leasing charges, largely of a seasonal nature, and a fall in gasoline prices partially dampened the overall upward pressure. A sharp decline in the Air-Transportation index (-6.6%), owing mainly to "seat sale" promotion in October and November, was the prime factor in the fall of the Public Transportation index.

The Food index rose by 0.5% as a result of increases of 0.2% in the index for Food Purchased from Stores and 1.0% in the index for Food Purchased from Restaurants. Most of the increase in the index for Food Purchased from Stores was due to a rise of 34.9% in the Fresh Vegetables index. Higher prices for lettuce and tomatoes were the principal factors in this latest rise. Moderate price increases were observed for beef, prepared and ready-cooked meat, fish, bakery products and sugar. A considerable part of the upward pressure was offset by lower prices for pork, poultry, cured meat, low-fat milk, fresh fruit, coffee, tea and soft drinks.

The index for Recreation, Reading and Education rose by 1.0% in the latest quarter. Attendance at movies, live sports events and the theatre became more expensive. Membership fees and dues for selected recreational activities, cablevision charges and the prices of newspaper and magazines also increased.

accompagnée de hausses des coûts d'intérêt hypothécaire et du prix des logements neufs, a grandement contribué aux frais des propriétaires. La hausse de 0.9% de l'indice du logement en location s'est aussi ajoutée à cette pression à la hausse. Des hausses moins remarquables mais relativement importantes des prix des meubles, du mazout, du gaz naturel et de certains articles ménagers en papier, en plastique et en papier d'aluminium ont été également observées. Les augmentations des prix des services de soins pour enfants et pour animaux domestiques ont également contribué à ces hausses. En même temps, la baisse saisonnière de 5.4% de l'indice de l'hébergement des voyageurs a exercé une influence modératrice considérable.

Au quatrième trimestre, l'indice des transports a progressé de 0.6%, augmentation imputable à la hausse de 1.5% de l'indice du transport privé et à la baisse de 3.7% de l'indice du transport public. La plus grande partie du relèvement de l'indice du transport privé est attribuable à l'augmentation du prix des voitures neuves. La hausse des frais de réparation et d'entretien des véhicules et des droits de permis de conduire a contribué, bien que dans une mesure moindre, à l'augmentation. La diminution des frais de location de véhicules automobiles, baisse essentiellement de nature saisonnière, et la réduction du prix de l'essence ont partiellement amorti la pression globale à la hausse. La chute de l'indice du transport par avion (-6.6%), surtout attribuable aux "soldes de places" effectués aux mois d'octobre et de novembre, est le principal facteur expliquant la baisse de l'indice du transport public.

L'indice des aliments a affiché une hausse de 0.5% attribuable aux augmentations de 0.2% de l'indice des aliments achetés au magasin et de 1.0% de l'indice des aliments achetés au restaurant. La plus grande partie de l'accroissement de l'indice des aliments achetés au magasin s'explique par une hausse de 34.9% de l'indice des légumes frais. La majoration du prix de la laitue et des tomates est le principal facteur expliquant cette hausse. Les prix du boeuf, des préparations à base de viande et des viandes cuites, du poisson, des produits de boulangerie et du sucre ont aussi affiché des hausses modérées. Une grande partie de la pression à la hausse a été neutralisée par la baisse du prix du porc, de la volaille, de la viande de salaison, du lait à basse teneur en gras, des fruits frais, du café, du thé et des boissons gazeuses.

Au dernier trimestre, l'indice des loisirs, lecture et formation a progressé de 1.0%. Il est maintenant plus dispendieux d'aller au cinéma et d'assister à des événements sportifs et à des pièces de théâtre. Les frais d'adhésion et les cotisations exigés pour la participation à certains loisirs ont aussi affiché des hausses. Les frais de télédistribution et le prix des journaux et des revues ont augmenté.

The separate impacts on the CPI which resulted from the rise observed in the other three major component indexes was relatively modest. The Clothing index rose by 0.5% largely due to higher prices for women's sports wear and foundation garments and for men's pants. Prices for materials and notions and dry-cleaning services also registered increases. The Tobacco Product and Alcoholic Beverages index advanced by 0.2% as the prices of cigarettes and served alcoholic drinks rose moderately. The Health and Personal Care index climbed by 0.4% as higher prices were observed for prescribed medicines and eye-care goods and services. Charges related to personal care services rose while prices of selected personal care supplies fell.

L'incidence sur l'IPC des augmentations observées dans chacun des trois autres indices des composantes principales a été relativement modeste. L'indice de l'habillement a affiché une hausse de 0.5% surtout attribuable au relèvement du prix des vêtements de sport et des vêtements de base pour dames et du prix des pantalons pour hommes. Le prix du tissu pour vêtements et des menus articles et les frais de nettoyage à sec ont aussi augmenté. L'indice des produits du tabac et des boissons alcoolisées a progressé de 0.2%, le prix des cigarettes et des boissons alcoolisées servies ayant affiché des hausses modérées. L'indice de la santé et des soins personnels a grimpé de 0.4%, le prix des médicaments sur ordonnance et les frais des articles et services pour les soins des yeux ayant augmenté. Les frais associés aux services de soins personnels ont progressé, tandis que le prix de certains articles et accessoires pour les soins personnels a diminué.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, *The Consumer Price Index*, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part V.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, *L'indice des prix à la consommation*, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie V.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

Part I

CURRENT CONSUMER PRICE INDEXES

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

(1) For explanatory notes and detailed item specification see Appendix 4.

(2) Blanks appear on this table where the quality and (or) quantity of the prices were insufficient to produce a good average.

(3) Whitehorse is not included in weighted city averages.

(4) Tenderloin removed priced in Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary and Whitehorse.

(5) Chicoutimi (450 g).

(1) Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

ARTICLE VEDETTE

INTRODUCTION

This year-end review of the behaviour of the Consumer Price Index for Canada (CPI) and its major components is a departure from previous reviews in several ways. Firstly, the span of time covered has increased considerably. The review covers the period 1976 to 1987 (12 years). Secondly, the behaviour of the CPI in Canada is compared with similar measures for other countries, with which Canada has had long-standing trading relationships. Thirdly, the CPI is compared to other measures of price change in Canada. Fourthly, the relationship between the CPI and some more widely used indicators of aggregate demand and aggregate supply is reviewed. Fifthly, the behaviour of the CPI and its major components over the 12-year period is observed. Finally, dispersions in the rates of price change among cities are examined.

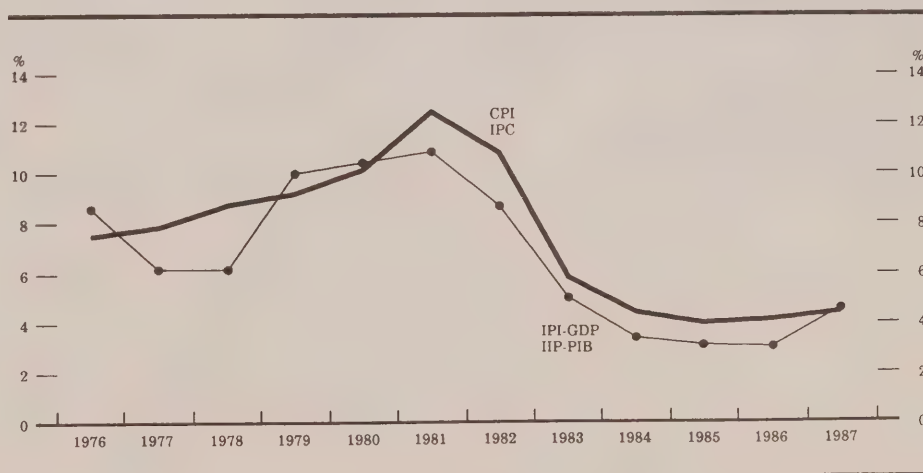

As in previous years, this article is based on changes in the CPI and its major components, as derived from annual average index levels. The CPI is a monthly index. The average of the indexes for the 12 calendar months of a year is the equi-weighted arithmetic average of the twelve monthly indexes. Changes calculated from these annual averages provide the basic data for this article. Similarly, to maintain consistency in the presentation, changes in all the other variables are calculated from their annual values. A major disadvantage of annual changes is that turning points in trends or cycles are not as precise.

CHANGES IN THE GENERAL PRICE LEVEL

The CPI is a widely used measure of changes in the general price level, partly because it is available monthly about two weeks after the reference month. A more comprehensive measure of inflation, available quarterly and finalized about two months after the reference quarter, is the Implicit Price Index derived as a by-product from deflating the estimates of Gross Domestic Product (IPI-GDP). While these indexes differ in terms of their definition, coverage and weighting system, their changes in the recent past follow the same cyclical pattern.

INTRODUCTION

Cette rétrospective annuelle du comportement de l'indice des prix à la consommation (IPC) canadien et de ses composantes principales se distingue à plusieurs égards des rétrospectives antérieures. Premièrement, la période observée est beaucoup plus longue (de 1976 à 1987, soit 12 années). Deuxièmement, nous comparons cette année le comportement de l'IPC au Canada à celui de mesures semblables dans quelques pays avec lesquels le Canada entretient depuis longtemps des relations commerciales. Troisièmement, nous comparons également le comportement de l'IPC à celui d'autres mesures de la variation des prix au Canada. Quatrièmement, nous examinons le lien entre l'IPC et quelques uns des indicateurs les plus connus de l'offre et de la demande globales. Cinquièmement, nous analysons le comportement de l'IPC et de ses composantes principales au cours des 12 dernières années et, enfin, l'écart entre les taux de variation des prix dans les villes pour lesquelles l'IPC est calculé.

Comme dans les rétrospectives antérieures, les variations de l'IPC et de ses composantes principales sont calculées à partir des niveaux annuels moyens. L'IPC est un indice mensuel. La moyenne des indices pour les 12 mois civils d'une année correspond à la moyenne arithmétique équipondérée des 12 indices mensuels. Les variations, calculées à partir de ces moyennes annuelles, constituent la matière première de cet article. En outre, afin d'assurer la cohérence de l'analyse, les changements enregistrés pour toutes les autres variables correspondent aux valeurs annuelles. Un des principaux désavantages de l'utilisation de moyennes annuelles est qu'elle ne permet pas de mettre aussi bien en évidence le renversement des tendances ni les points tournants dans un cycle.

VARIATIONS DANS LE NIVEAU GÉNÉRAL DES PRIX

L'IPC est une mesure largement utilisée qui permet de suivre l'évolution du niveau général des prix puisqu'il est publié chaque mois, environ deux semaines après le mois de référence. Une mesure plus globale de l'inflation, l'indice implicite des prix du produit intérieur brut (IPI-PIB), diffusé trimestriellement (environ 2 mois après le trimestre de référence), est un sous-produit de la déflation des estimations du PIB. Bien que ces deux indices se distinguent par le champ d'observation, la définition et les méthodes de pondération, ils ont suivi les mêmes variations cycliques ces dernières années.

The CPI (See Figure 1) demonstrated accelerated rates of increase between 1976 (7.5%) and 1981 (12.5%). Between 1981 and 1984, annual increases have slowed down considerably. Since 1984, the increases have remained relatively stable averaging a little over 4% per year. Hence, in the 12-year period covered by the Figure, 1981 represents a distinct peak in the inflationary cycle in Canada. The slight acceleration noted since 1985 in the CPI has been the cause of some concern, however, it is too early to claim, with any great degree of confidence, that the economy is once more in an inflationary upswing.

Except for the conflicting signals in the two indexes between 1976 and 1978, changes in the IPI-GDP and in the CPI have generally followed the same pattern. Both indexes peaked in 1981, had sharply declining rates of increase between 1981 and 1984, and have shown small changes since 1984.

PRICE CHANGES IN CANADA'S TRADING PARTNERS

Canada's competitive ability is affected by our overall price performance compared to that of our trading partners since changes in prices are, in part, a reflection of changes in costs of production. In addition the exchange rate between the Canadian dollar and the currencies of Canada's trading partners can be influenced by differences in actual or projected inflation rates. For such reasons it is interesting to compare Canada's price performance with that of its major trading partners.

As industrial countries, both West Germany and Japan have experienced rates of inflation that have been among the lowest in the world, in the period under review (see Figure 2). During the early part of the 1980's, Canada narrowed the large gap between its inflation rate and that of the two countries, but the gap widened again in 1986.

Le taux d'accroissement de l'IPC (voir figure 1) s'est accéléré entre 1976 (7.5%) et 1981 (12.5%) puis a considérablement ralenti entre 1981 et 1984. Depuis 1984, les hausses annuelles moyennes de l'indice se sont stabilisées à un peu plus de 4%. Ainsi, comme le montre la figure 1, pendant la période de 12 ans à l'étude, c'est en 1981 que l'inflation a atteint son plus haut point au Canada. La légère hausse de l'indice depuis 1985 a soulevé chez certains la crainte d'une flambée inflationniste. Toutefois, il est encore beaucoup trop tôt pour pouvoir raisonnablement affirmer que l'économie vient à nouveau d'entrer dans un cycle inflationniste.

Abstraction faite des mouvements contraires observés entre 1976 et 1978, l'IIP-PIB et l'IPC ont en général suivi la même courbe. En effet, ils ont atteint un sommet en 1981, ont beaucoup diminué entre 1981 et 1984 et n'ont presque pas bougé depuis.

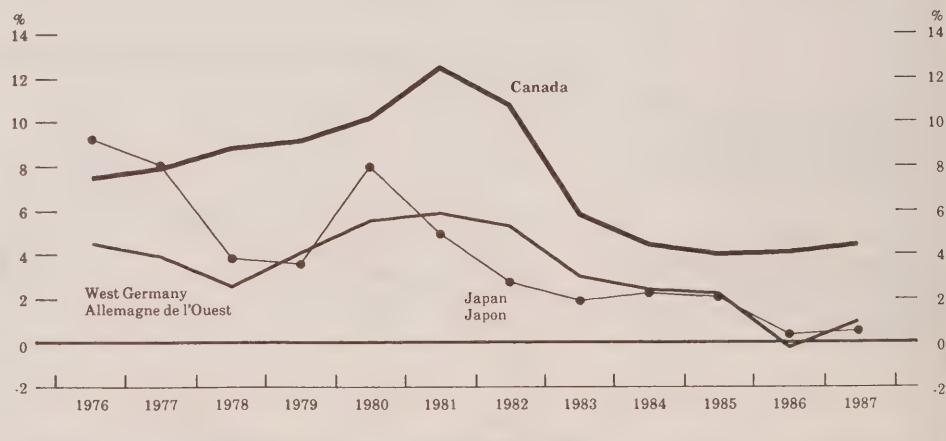

VARIATIONS DES PRIX CHEZ LES PARTENAIRES COMMERCIAUX DU CANADA

L'aptitude du Canada à soutenir la concurrence est fonction de l'évolution de son niveau général des prix par rapport à celui de ses partenaires commerciaux, les mouvements de prix étant en partie attribuables aux variations des coûts de production. En outre, la valeur du dollar canadien par rapport aux devises de ses partenaires commerciaux peut être influencée par des différences dans notre taux d'inflation réel ou projeté. Voilà pourquoi il est intéressant de comparer le niveau général des prix du Canada à celui de ses principaux partenaires commerciaux.

Parmi les pays industrialisés, l'Allemagne de l'Ouest et le Japon ont enregistré des taux d'inflation parmi les plus bas au monde pendant la période étudiée (voir figure 2). Au début des années 80, le Canada a réduit le vaste écart entre son taux d'inflation et ceux de l'Allemagne de l'Ouest et du Japon. Malheureusement, l'écart s'est de nouveau accentué en 1986.

consommation d'ensemble pour
le Canada, l'Allemagne de l'ouest
et le Japon

In view of the overwhelmingly large proportion of two-way trading with the United States, there is considerable interest in price change differences between Canada and the United States (see Figure 3).

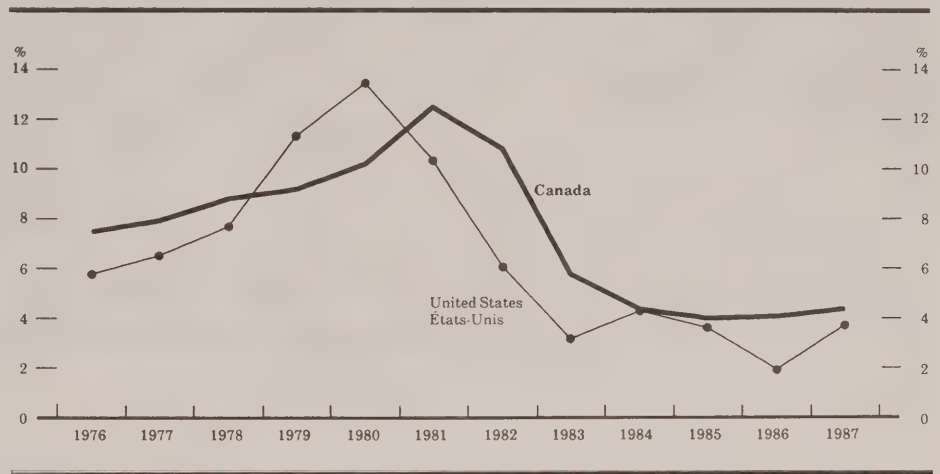

The major turning point in the U.S. inflationary cycle occurred in 1980, about a year sooner than the Canadian turning point. Between 1980 and 1987 the U.S. CPI has risen at lower annual rates than those of the Canada CPI. Except for a brief reversal in 1984, the deceleration continued to 1986. A relatively sharp rise in 1987 in the U.S. rate has brought it close to the Canadian rate.

Étant donné que les États-Unis sont de loin le plus important partenaire commercial du Canada (importations et exportations canadiennes), les variations de prix dans les deux pays présentent beaucoup d'intérêt (voir figure 3).

Aux États-Unis, le point tournant dans le cycle inflationniste est survenu en 1980, soit environ une année plus tôt qu'au Canada. De 1980 à 1987, l'IPC américain a enregistré des augmentations annuelles moins prononcées que l'IPC canadien. Exception faite d'un bref renversement en 1984, cette décélération s'est poursuivie jusqu'en 1986. Toutefois, en 1987, l'IPC américain affichait une hausse assez prononcée, qui l'a porté à un niveau proche de l'IPC canadien.

Figure 3
Annual Percentage Change in the All-items Consumer Price Index for Canada and the United States

Taux de variation annuel de l'indice des prix à la consommation d'ensemble pour le Canada et les États-Unis

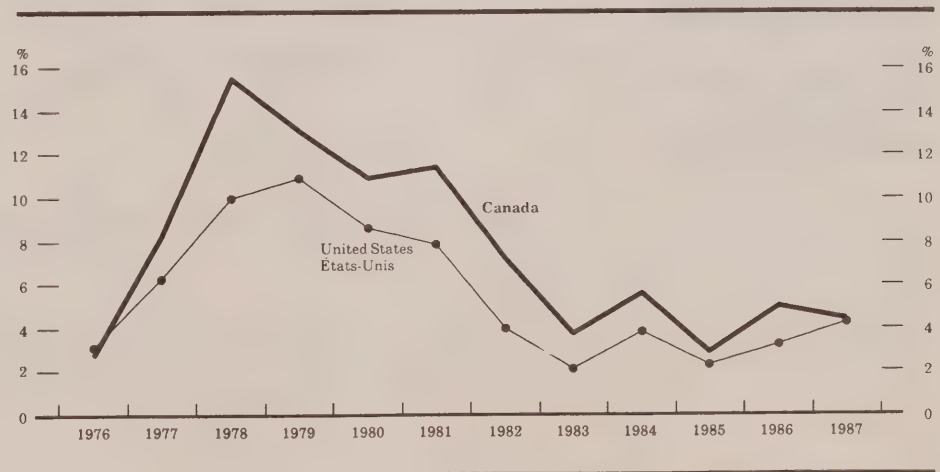

Looking at the performance of some of the major component indexes of the two countries may help to point to the sources of the differences. Figure 4 shows the behaviour of the Food indexes of the two countries. The indexes move in sympathy, but price changes for Food in the U.S. have been consistently lower from 1977 to 1986 than those of Canada. However, the increase in the U.S. Food index for 1987 has accelerated, while that for Canada has slowed down.

L'examen du comportement des indices des composantes principales des IPC de l'un et l'autre pays peut nous aider à définir les causes des différences observées. La figure 4 montre le comportement de l'indice des aliments dans les deux pays. Comme on peut le voir, les deux indices ont progressé en parallèle de 1977 à 1986, mais les hausses des prix des aliments aux États-Unis ont été systématiquement inférieures à celles observées au Canada. Cependant, en 1987, la progression de l'indice des aliments américain s'est accélérée tandis que celle de l'indice canadien s'est ralentie.

Figure 4
Annual Percentage Change in the Consumer Price Index for Food, Canada and United States

Taux de variation annuel de l'indice des prix à la consommation pour les aliments, Canada et les États-Unis

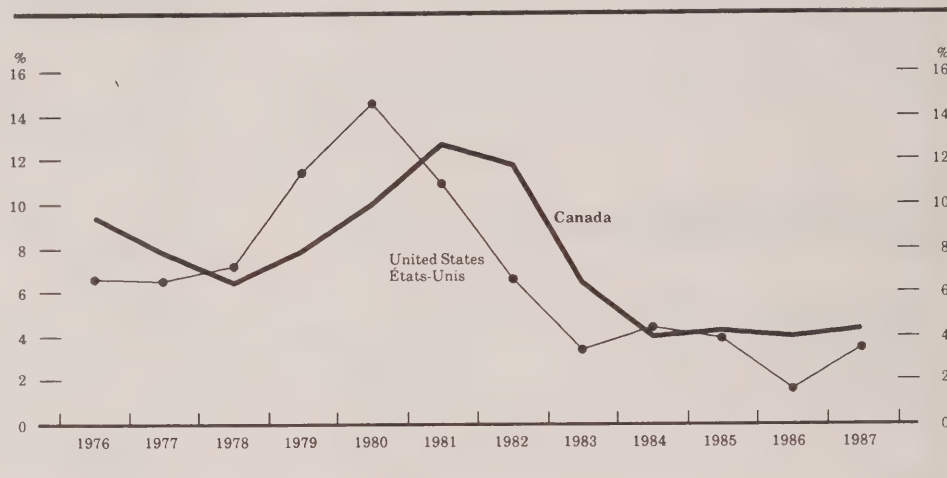

The changes in non-food components are plotted in Figure 5. In the earlier part of the period, the U.S. experienced higher rates of price change, while in the latter period increases were generally lower and more volatile than those observed in Canada. Again, the sharp acceleration in 1987 in the U.S., in the All-items excluding Food index, is evident.

Les variations enregistrées pour les indices des composantes principales non alimentaires sont présentées à la figure 5. Dans la première partie de la période, les taux d'accroissement des prix aux États-Unis ont été supérieurs à ceux observés au Canada tandis que dans la seconde, ils y ont été inférieurs mais plus instables. Encore une fois, la figure 5 montre la hausse importante, enregistrée aux États-Unis en 1987, de l'indice d'ensemble sans les aliments.

Figure 5
Annual Percentage Change in the Consumer Price Index for All-items Excluding Food, Canada and United States

Taux de variation annuel pour l'indice des prix à la consommation pour l'ensemble sans les aliments, Canada et les États-Unis

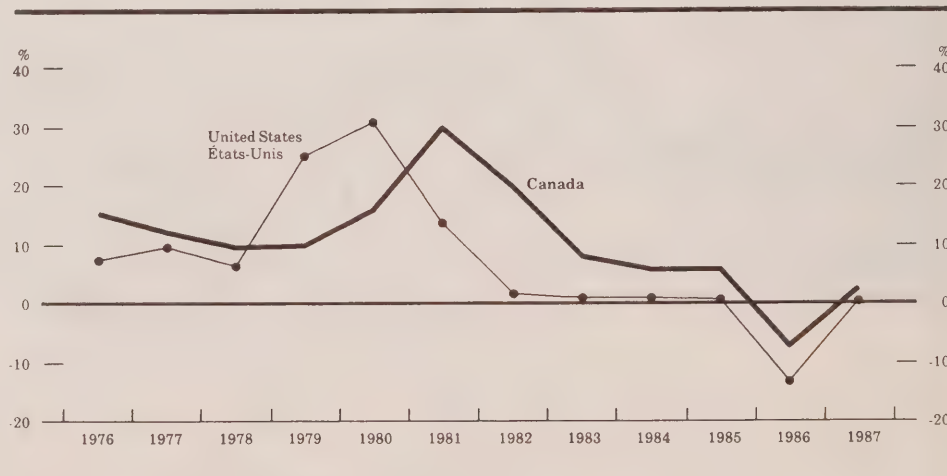

Some part of the behaviour of the All-items excluding Food index of both countries may be explained by changes in the Energy index (see Figure 6). Energy price increases in the U.S. exceeded those of Canada in 1979 and 1980, as the economy adjusted to the deregulation of the petroleum industry in the U.S. However, since 1981, movements in the price of energy in the U.S. have generally been lower than those of Canada. Both the All-items excluding Food and the Energy indexes peaked in 1980 in the U.S., a year sooner than in Canada. This pattern was also observed in the All-items indexes.

Le comportement au Canada et aux États-Unis des indices d'ensemble sans les aliments peut en partie être expliqué par les variations de l'indice de l'énergie (voir figure 6). En 1979-1980, quand l'économie américaine était en train de s'adapter à la déréglementation de l'industrie pétrolière, la hausse des prix des produits de l'énergie a été plus élevée aux États-Unis qu'au Canada. Toutefois, depuis 1981, les hausses aux États-Unis ont dans l'ensemble été moins fortes qu'au Canada. Aux États-Unis, l'indice d'ensemble sans les aliments et l'indice de l'énergie ont tous deux culminé en 1981, soit une année plus tôt qu'au Canada. Cette tendance a également été observée pour l'indice d'ensemble.

Figure 6
Annual Percentage Change in the Consumer Price Index for Energy, Canada and United States

Taux de variation annuel de l'indice des prix à la consommation pour l'énergie, Canada et les États-Unis

THE CPI AND OTHER RELATED AGGREGATES

Changes in the CPI may be viewed as resulting from changes in the components of aggregate demand and aggregate supply. On the demand side, such variables as changes in real incomes, changes in the rate of employment and unemployment and changes in the money supply are deemed critical. On the aggregate supply side, variables such as wage rate increases, changes in the prices of raw materials and other intermediate goods and changes in the exchange rate of the Canadian dollar vis-à-vis the currencies of Canada's major trading partners, are important.

In this section, we display movements in the CPI in conjunction with movements in some of the selected aggregate variables mentioned above. In doing so, readers are given the opportunity to view the behaviour of the related variables over the specified period. The theoretical linkages in the variables may not be easily discernible and may not measure up to our expectations. Some of this may result from the uncertainties, relating to the channels by which effects are transmitted and the timing of such effects. These important issues cannot be covered here.

In Figure 7, annual changes in the CPI are plotted against annual changes in real GDP, real personal consumption expenditure and real personal disposable income. Changes in personal disposable income cause shifts in the aggregate demand function. As real incomes rise, consumption expenditures are expected to rise, putting upward pressure on prices. Domestic prices may escape some of this upward stress, if the increases in real incomes are spent on imports.

IPC ET AGRÉGATS CONNEXES

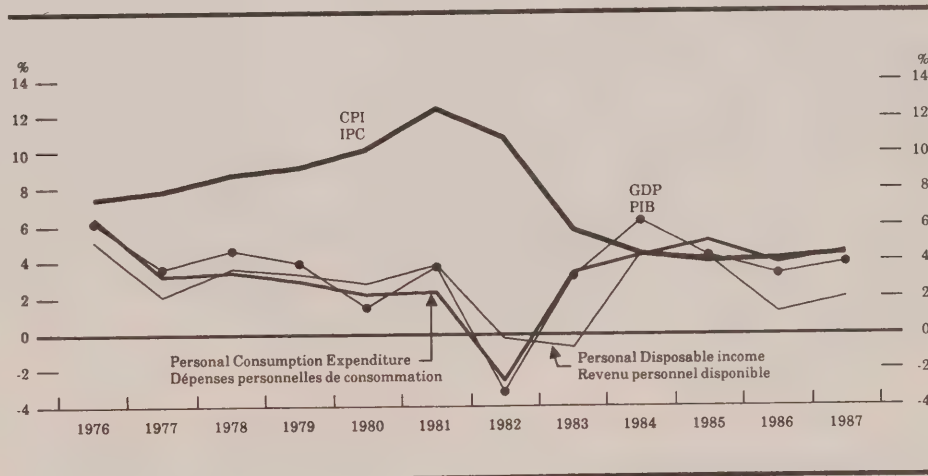

Les mouvements de l'IPC peuvent être considérées comme étant attribuables aux variations des composantes de la demande et de l'offre globales. Pour ce qui est de la demande, des variations observées pour des variables comme le revenu réel, le taux d'emploi et de chômage et la masse monétaire constituent des facteurs importants. Pour ce qui est de l'offre globale, mentionnons des variables comme l'augmentation des salaires et des prix des matières premières et des produits semi-ouvrés ainsi que les variations de la valeur du dollar canadien par rapport aux devises des principaux partenaires commerciaux du Canada.

Dans la présente section, nous rapprochons les mouvements de l'IPC aux mouvements de certaines des variables agrégées précitées. Le lecteur pourra ainsi suivre l'évolution de variables connexes au cours de la période à l'étude. Les liens théoriques au niveau des variables ne sont pas toujours évidents et ne répondent pas toujours à nos attentes, en partie parce que nous ne savons pas avec certitude comment les effets se transmettent et à quel moment ils se font sentir. Nous ne pouvons approfondir ces questions importantes ici.

La figure 7 présente les variations annuelles de l'IPC et du PIB réel, des dépenses de consommation réelles et du revenu personnel disponible réel. Les variations dans le revenu personnel disponible entraînent un déplacement de la courbe de la demande globale. En effet, au fur et à mesure qu'augmente le revenu réel, on peut prévoir que les dépenses de consommation vont aussi augmenter et provoquer une pression à la hausse sur les prix. Les prix des produits de fabrication intérieure peuvent échapper partiellement à cette pression si les consommateurs utilisent le revenu réel supplémentaire pour acheter des produits importés.

Figure 7
Annual Percentage Change in the Consumer Price Index (CPI), Gross Domestic Product (GDP), Personal Consumption Expenditure and Personal Income (constant 1981 dollars)

Taux de variation annuel de l'indice des prix à la consommation (IPC), produit intérieur brut (PIB), des dépenses personnelles de consommation, du revenu personnel disponible (dollars constants de 1981)

The changes in the real variables noted above clearly point to the dramatic recession of 1981-1982. However, rates of growth preceding this point in time were generally decelerating. Meanwhile, the CPI in the pre-1981 period was rising at an accelerated rate. The recession of 1981-1982 had a powerful effect in slowing down the rate of inflation over the next three years, but the rate of inflation has remained relatively stable for the last four years.

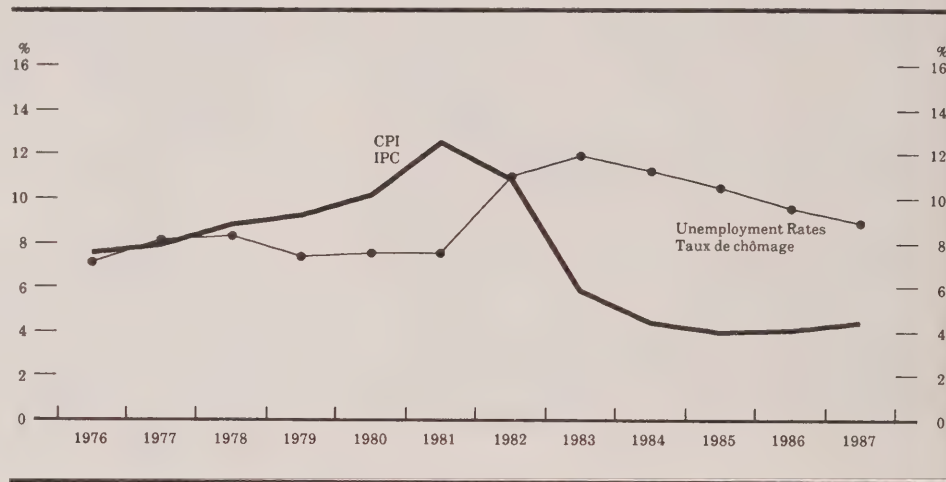

Les variations que nous avons décrites ci-dessus dans le revenu personnel disponible réel et dans les dépenses de consommation réelles ont abouti, cela ne fait aucun doute, à la grave récession économique de 1981-1982. Dans la période précédant la crise, le taux de croissance était, de façon générale, en perte de vitesse tandis que l'IPC augmentait rapidement. La récession de 1981-1982 a entraîné un ralentissement considérable de l'inflation durant les trois années qui ont suivi mais, depuis quatre ans, le taux d'inflation ne bouge presque plus.

The rate of change in unemployment and the rate of change in persons employed are widely used indicators of pressures on the CPI. Prior to 1982, there was strong employment growth, but a stable unemployment rate, associated with accelerating inflation. The 1982 recession brought dramatic change, as the unemployment rate rose sharply, while employment and inflation declined. Over the last four years, employment growth has returned to pre-recession levels, but unemployment is still above pre-recession rates, while inflation rates have remained relatively stable. (see Figure 8).

Les variations du taux de chômage et du taux d'emploi sont des indicateurs largement utilisés pour évaluer les pressions qui s'exercent sur l'IPC. Avant 1982, la croissance de l'emploi a été vigoureuse, mais le taux de chômage est demeuré stable, et l'inflation a progressé à un taux accéléré. La situation a brusquement changé en 1982, le taux de chômage augmentant fortement alors que l'emploi et l'inflation diminuaient. Depuis quatre ans, la croissance de l'emploi est revenue aux niveaux d'avant la récession, mais les taux de chômage sont toujours supérieurs à ceux d'avant la récession, alors que les taux d'inflation sont restés relativement stables (voir figure 8).

Figure 8
Annual Rates of Change in the Consumer Price Index and Annual rates of Unemployment

Taux de variation annuel de l'indice des prix à la consommation et taux annuel de chômage

The links between the change in money supply and changes in the CPI are subject to considerable controversy. In Figure 9, changes in various monetary aggregates are shown with changes in the CPI superimposed. Falling rates of increase in the money supply lead, in theory, to rising interest rates, a slowdown in spending and therefore, declining rates of inflation. This sequence of events appears to be broadly met with the 1979-80 to 1982-83 decline in the growth rate of the money supply, but with lags that varied from one to three years, depending on which monetary aggregate is used. A crude estimate of the lag time associated with changes in monetary aggregates and changes in nominal interest rates may be derived by comparing the movements as shown in Figure 10 with those shown in Figure 9.

Le lien entre la masse monétaire et les variations de l'IPC soulève de vives controverses. La figure 9 montre les variations observées pour les différents agrégats monétaires et les variations de l'IPC. Théoriquement, un ralentissement de la croissance de la masse monétaire va entraîner une hausse des taux d'intérêt, une réduction de la consommation et partant, un fléchissement du taux d'inflation. En gros, c'est effectivement cet enchaînement qu'on a observé de 1979-1980 à 1982-1983, quand a diminué le taux de croissance de la masse monétaire, mais avec toutefois des retards d'un à trois ans selon l'agrégat monétaire considéré. Il est possible d'estimer sommairement le décalage entre les variations des agrégats monétaires et les variations des taux d'intérêt nominaux en comparant les mouvements présentés à la figure 10 à ceux de la figure 9.

Figure 9
Annual Rates of change in the Consumer Price Index and in Monetary Aggregates - M1, M2 and M3

Nominal Interest Rates

Niveaux annuels de certains taux
d'intérêt nominaux

A big factor, influencing wage demand, is keeping up with the rate of inflation in an attempt to protect the purchasing power of nominal wages. This factor has been associated with "cost-push" inflation. The rate of increase in wages (see Figure 11) has tended to vary about the rate of increase in the CPI. Previous to 1981, increases in wages tended generally to be higher than increases in the CPI. Following that year, rates of pay increases have tended to fall below the rate of inflation. The divergence was quite

Dans les revendications salariales, le rattrapage de l'inflation pour protéger le pouvoir d'achat des revenus nominaux est un facteur important. Toutefois, ce rattrapage peut entraîner une inflation par les coûts. Dans l'ensemble, la progression des salaires (voir figure 11) a suivi d'assez près celle de l'IPC. Avant 1981, les hausses salariales étaient généralement supérieures à l'augmentation de l'IPC. Après, c'est le contraire que l'on a observé. L'écart entre les salaires et l'IPC a été particulièrement remarquable en 1984 et en 1986.

industries manufacturières

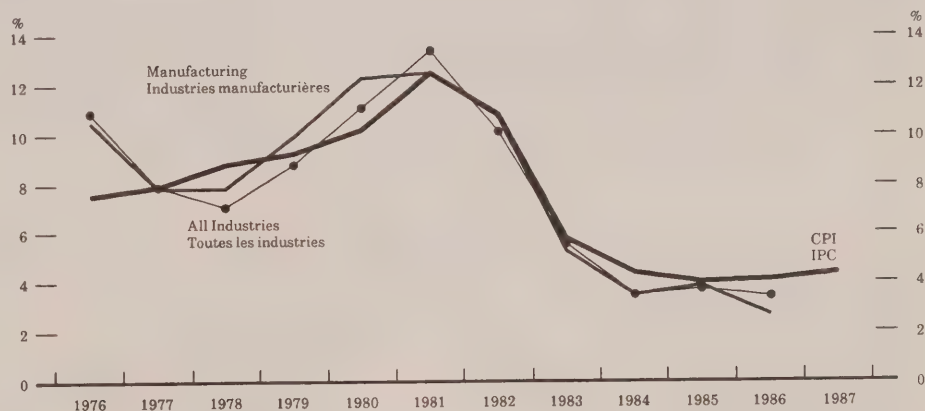

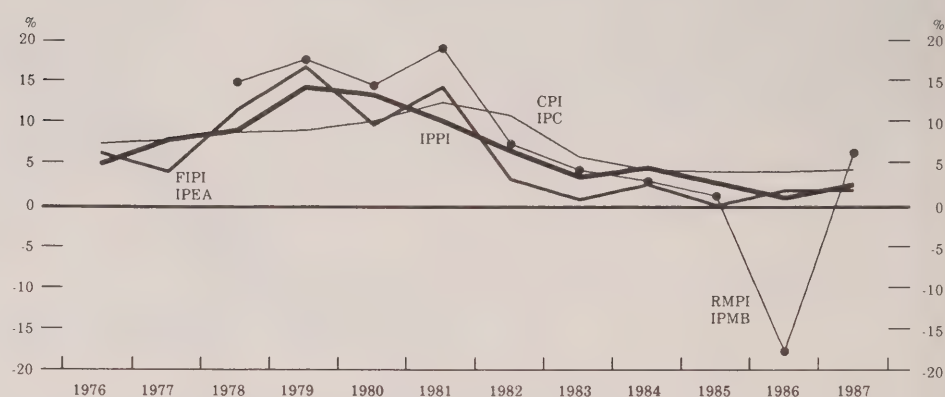

Figure 12 shows changes in the Industry Product Prices Index (IPPI), which measures price change for manufactured goods at the factory gate. Changes in Raw Materials Price Index (RMPI) and in the Farm Input Price Index (FIPI) are also displayed. These three indexes represent price changes for goods at various stages of the production process. The CPI is an index for final consumer goods and services. Changes in the price of intermediate goods represent a cost which would likely be passed on to prices of final goods.

La figure 12 fait voir les variations de l'indice des prix des produits industriels (IPPI) qui mesure les variations du prix des sorties des entreprises de fabrication. La figure montre également les variations de l'indice des prix des matières brutes (IPMB) et l'indice des prix des entrées dans l'agriculture (IPEA). Ces trois indices mesurent les variations du niveau des prix des produits aux diverses étapes du processus de production. L'IPC est un indice des prix des produits finaux et des services offerts aux consommateurs. Les variations dans les prix des produits semi-finis correspondent à un coût qui serait probablement ajouté au prix des produits finaux.

Figure 12

Annual Rates of change in the Consumer Price Index (CPI), Industrial Product Price Index (IPPI), Raw Materials Price Index (RMPI) and the Farm Input Price Index (FIPI)

Taux de variation dans l'indice des prix à la consommation (IPC), l'indice des prix des produits industriels (IPPI), l'indice des prix des matières brutes (IPMB) et l'indice des entrées dans l'agriculture (IPEA)

It is evident from these Figures that the CPI represents the least volatile of the four indexes. The broad cyclical pattern is present in all the indexes, at least until about 1985. After that, the RMPI declined sharply in 1986, and rebounded even more sharply in 1987. Rates of increases in the CPI since 1982 were generally higher than those of the other three indexes. The exception has occurred with the sharp upturn in the RMPI in 1987.

Ces figures montrent clairement que l'IPC est le moins instable des quatre indices. Tous les indices ont affiché les mêmes grandes variations cycliques, du moins jusqu'en 1985. En 1986, l'IPMB a brusquement chuté puis a remonté quelque peu en 1987. Les taux d'augmentation de l'IPC depuis 1987 ont été supérieurs dans l'ensemble à ceux des trois autres indices. Seul l'IPMB a enregistré une hausse très prononcée en 1987.

BEHAVIOUR OF MAJOR COMPONENT INDEXES

The seven major component indexes of the Consumer Price Index are compared to the All-items index in figures 13, 14 and 15. The Food index (figure 13) peaked in 1978 and then had an upturn coincident with the 1981 peak in the All-items index. Since 1981, the Food index has followed a similar but more volatile cyclical trend. Prior to 1980, the Housing index was on a quite different trend from the All-items index but since 1980, they have followed a similar trend.

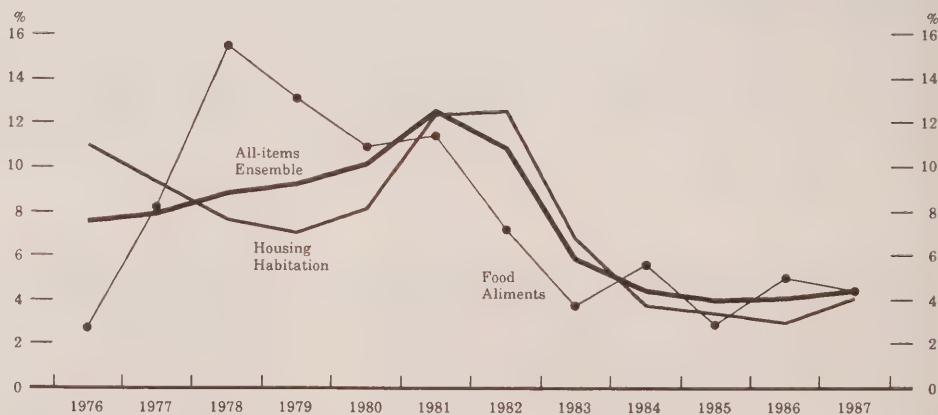

MOUVEMENTS DES COMPOSANTES PRINCIPALES DE L'INDICE D'ENSEMBLE

Les figures 13, 14 et 15 permettent de comparer les variations des sept composantes principales aux variations de l'indice d'ensemble. Le taux d'augmentation de l'indice des aliments (figure 13) a atteint son maximum en 1978, puis il a enregistré une hausse qui coïncidait avec le taux d'augmentation maximum de l'indice d'ensemble. Depuis 1981, l'indice des aliments a suivi la tendance générale mais a affiché des variations beaucoup plus considérables. Avant 1980, les mouvements de l'indice de l'habitation étaient très différents de ceux de l'indice d'ensemble mais, depuis 1980, ils sont semblables.

Figure 13

Annual percentage change in the Consumer Price Index - All-items, Food and Housing

Taux de variation annuel des indices des prix à la consommation, ensemble, aliments et habitation

Clothing, (figure 14) which except for 1979 and 1980 has consistently had rates of increase below the All-items, accelerated in 1987. From 1979 to 1983, the Transportation index made significant contributions: first to the acceleration of the All-items and then to its deceleration. Since 1983, the Transportation index has moved at similar rates to the All-items.

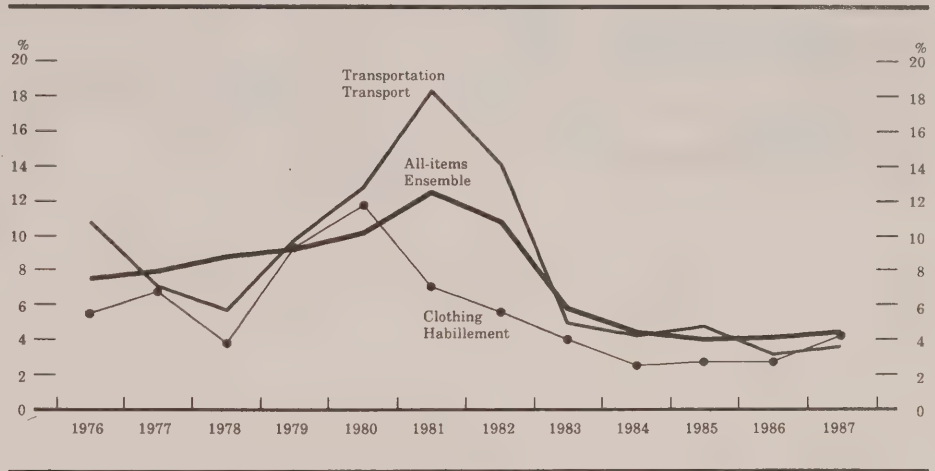

The Health and Personal Care index and the Recreation, Reading and Education indexes (figure 15) have each paralleled movements in the All-items since 1978. Up to 1981, the Tobacco and Alcohol indexes moved generally with the All-items but since 1981 this index has been consistently increasing at rates faster than the All-items.

Le taux d'augmentation de l'indice de l'habillement (figure 14) qui, sauf pour les années 1979 et 1980, a constamment été inférieur à celui de l'indice d'ensemble, s'est accéléré en 1987. De 1979 à 1983, l'indice des transports a eu un effet marqué d'abord sur l'accélération puis sur le ralentissement du mouvement de l'indice d'ensemble. Depuis 1983, l'indice des transports évolue à peu près au même rythme que l'indice d'ensemble.

Depuis 1978, l'indice de la santé et des soins personnels ainsi que l'indice des loisirs, de la lecture et de la formation (figure 15) suivent les mouvements de l'indice d'ensemble. Jusqu'en 1981, l'indice des produits du tabac et des boissons alcoolisées a suivi la progression de l'indice d'ensemble, mais depuis 1981, il a sans cesse augmenté et plus rapidement.

GOODS AND SERVICES

A breakdown of the All-items index in terms of its Goods and Services components has had a revival of interest in more recent years. The Service sector has outstripped the Goods sector as the major source of new jobs and income. Along with this phenomenon has come renewed interests in questions of the relative performance of the two sectors with respect to productivity, costs and prices.

Changes for the Goods and Services indexes are plotted in Figure 16. Increases in the Goods index reached a peak in 1981, coinciding with the peak rise in the All-items index. The Services index reached its turning point in 1982.

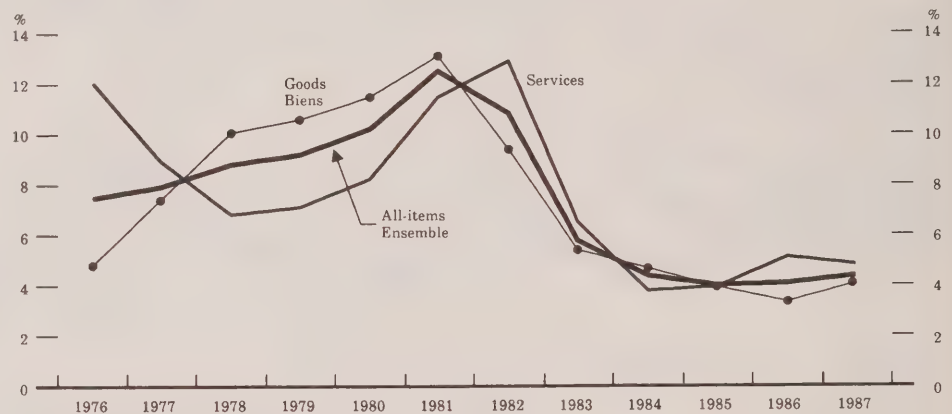

BIENS ET SERVICES

Depuis quelques années, on observe un regain d'intérêt pour les indices des biens et services (groupes de base reclassifiés selon les biens et services). Le secteur des services a remplacé le secteur des biens comme principale source de nouveaux emplois et de revenus. C'est en raison de ce phénomène que s'est également développé chez les utilisateurs un intérêt pour la question de la performance relative de chacun des deux secteurs au chapitre de la productivité, des coûts et des prix.

La figure 16 montre les fluctuations des indices des biens et des services. En 1981, l'indice des biens a atteint un sommet qui a coïncidé avec la crête observée pour l'indice d'ensemble. L'indice des services a atteint son point culminant en 1982.

Figure 16
Annual percentage change in the
Consumer Price Indexes - All-
items, Goods and Services

Taux de variation annuel des
indices des prix à la
consommation - ensemble, biens
et services

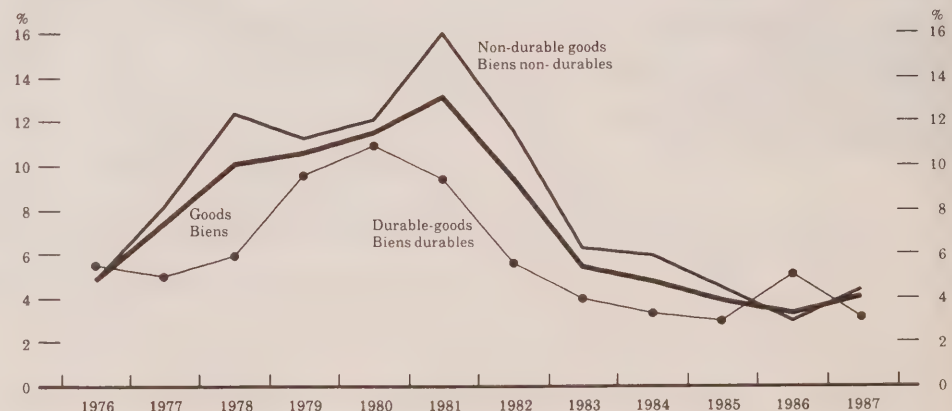

A further breakdown of the Goods index is provided in Figure 17, where the changes in Durable and Non-Durable goods prices are plotted. It is evident that for the better part of the period in question, the Goods index was pulled up by changes in the Non-Durable index and pulled down by changes in the Durable Goods index.

La figure 17 présente les variations observées dans l'indice des biens subdivisé en biens durables et en biens non-durables. Il est clair que pendant la majeure partie de la période étudiée, les biens non-durables ont exercé une pression à la hausse sur l'indice des biens et les biens durables, une pression à la baisse.

Figure 17
Annual percentage change in the
Consumer Price Indexes - Goods,
Durable goods and non-durable
goods

Taux de variation annuel des
indices des prix à la
consommation - biens, biens
durables et biens non- durables

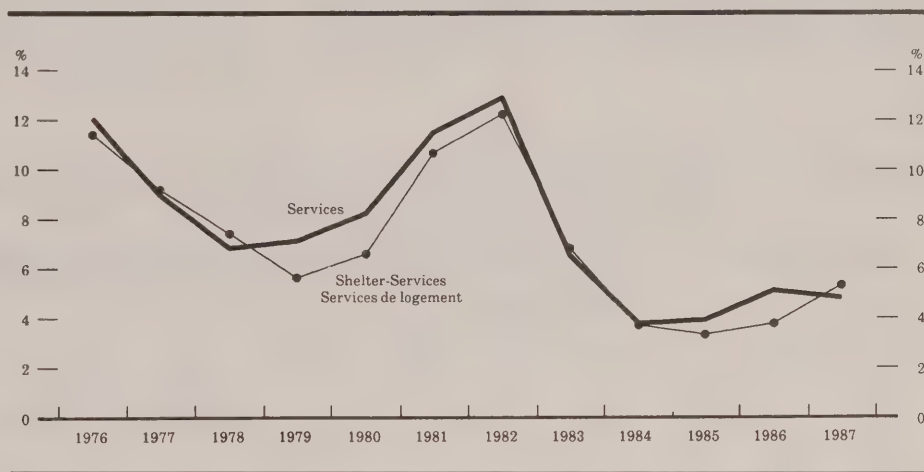

A large part of the Services index is comprised of Services obtained from rented and owned dwellings. These are termed Shelter Services. Between 1979 and 1982, increases in Shelter Services were generally lower than increases in the aggregate Services index. Since 1985, the price of Shelter Services has been rising at accelerated rates and in 1987 had a higher rate of price increase than the aggregate Services index (see figure 18).

Les services de logement (logements en location et logements en propriété) constituent un des sous-groupes les plus importants de l'indice des services. Entre 1979 et 1982, les augmentations pour les services de logement ont généralement été inférieures à celles de l'indice des services. Depuis 1985, le prix des services de logement n'a cessé de croître et, en 1987, le taux d'augmentation des services de logement dépassait le taux d'augmentation de l'indice des services (voir figure 18).

CONTRIBUTIONS TO THE 1987 CHANGE IN THE CPI

One method of explaining the change in the All-items index for Canada in 1987 is to identify those component indexes that have contributed to some significant extents to that change. The contribution of an index depends on the relative change of that index and the relative importance of the expenditure weights associated with that index in the CPI basket.

In 1987, the All-items index for Canada advanced by 4.4%. More than one-third of this rise was explained by a 4.1% increase in the Housing index (see Text Table I). The 4.4% rise in the Food index accounted for one fifth of the change in the All-items index. About thirteen percent of the overall change came from the 3.6% increase in the Transportation index. Slightly over ten percent each originated from increases of 6.7% in the Tobacco Product & Alcoholic Beverages index and 5.4% in the Recreation, Reading and Education index. The Clothing index contributed eight percent of the total rise by advancing 4.2%. The Health and Personal Care index accounted for approximately five percent with a rise of 5.0%.

PRINCIPAUX FACTEURS DE LA VARIATION DE L'IPC EN 1987

Une façon d'expliquer les mouvements de l'indice d'ensemble en 1987 est de déterminer quels indices ont eu un effet d'entraînement significatif. L'effet d'un indice d'une composante sur l'indice d'ensemble est fonction de la variation relative de cet indice et de l'importance relative du poids qui lui a été attribué dans le panier de produits de l'IPC.

En 1987, l'indice d'ensemble a progressé de 4.4%. Plus du tiers de cette hausse est attribuable à l'augmentation de 4.1% de l'indice de l'habitation (voir tableau explicatif I). La hausse de 4.4% de l'indice des aliments explique un cinquième de la hausse de l'indice d'ensemble. Environ treize pour cent de la hausse totale de l'indice d'ensemble est due à l'augmentation de 3.6% de l'indice des transports. Un peu plus de dix pour cent de l'augmentation de l'indice d'ensemble est attribuable à l'accroissement de 6.7% de l'indice des produits du tabac et des boissons alcoolisées et à la hausse de 5.4% de l'indice des loisirs, de la lecture et de la formation. L'indice de l'habillement, qui a augmenté de 4.2%, représentait huit pour cent de l'augmentation totale. L'indice de la santé et des soins personnels, qui s'est accru de 5%, représentait cinq pour cent dans la progression de l'indice d'ensemble.

A further breakdown of the major component indexes will bring us closer to the markets responsible for the increased pressures on the change in the CPI in 1987. In the Housing index, rising shelter charges have played an overwhelmingly important role. In the Food index changes in the prices of food purchased from stores have played the dominant role. In Transportation, higher prices for the purchase and maintenance of a private automobile impacted heavily. Higher recreational charges were the leading factors in the Recreation, Reading and Education index. In the Tobacco Products and Alcoholic Beverages index, the effects were roughly the same in the two subcomponents. In Clothing, increased prices of women's wear exerted the larger influence. In the Health and Personal Care index, price increases in the two subcomponents had roughly the same impact.

Une ventilation plus détaillée des composantes principales de l'indice d'ensemble va nous permettre de mieux déterminer quels marchés ont provoqué une plus forte poussée de l'IPC en 1987. Pour ce qui est de l'indice de l'habitation, l'accroissement des frais de logement a eu un effet d'entraînement très marqué. Quant à l'indice des aliments, ce sont les variations des prix des aliments achetés au magasin qui ont joué le rôle le plus important. En ce qui concerne l'indice des transports, ce sont les hausses du prix d'achat et des frais d'entretien des voitures particulières qui ont eu le plus d'effet. Pour l'indice des loisirs, de la lecture et de la formation, c'est la hausse des prix pour les loisirs qui a eu le plus de répercussions sur l'indice d'ensemble. Au chapitre de l'indice des produits du tabac et des boissons alcoolisées, les effets des deux éléments de cette composante ont été comparables. Quant à l'indice de l'habillement, il a progressé à cause surtout des majorations des vêtements pour femmes. Enfin, pour ce qui est de l'indice de la santé et des soins personnels, les pressions attribuables à l'un et l'autre élément ont été sensiblement les mêmes.

TEXT TABLE I. Percentage Changes and Proportion of Contribution to Change in the All-items Index for Canada by Major Component and Selected Sub-component Indexes - 1987.

TABLEAU EXPLICATIF I. Taux de variation et proportion de la contribution au changement dans l'indice d'ensemble pour le Canada, par composantes principales et certains sous-groupes - 1987.

	Percentage change in 1987 Taux de variation en 1987	Contributions (in percentage - en pourcentage)
<u>Food - Aliments</u>	4.4	20.0
Food Purchased from Stores/Aliments achetés au magasin	4.6	15.2
Food Purchased from Restaurants/Aliments achetés au magasin	4.0	4.8

Tobacco Products/Produits du tabac	8.5	5.1
Alcoholic Beverages/Boissons alcoolisées	5.5	5.3

VARIATION IN CONSUMER PRICE CHANGES BY CITY

In addition to the All-items index for Canada, Statistics Canada compiles and publishes All-items indexes for sixteen cities located across the country. Users of this information are reminded that city CPI's are a measure of price change over time for a defined urban centre. These measures do not indicate differences in price levels between cities, and, thus, do not represent differences in the "cost-of-living" between one city and another.

The numbers shown in Text Table II indicate the rate of price change in 1987 for the All-items index and its major component indexes for each of the sixteen urban centres. The changes shown for the corresponding indexes for Canada represent national averages.

TEXT TABLE II. Annual Percentage Change for All-items Consumer Price Index and Major Component by Canada and Cities - 1987

A country as geographically extensive as Canada will reflect considerable diversity in economic conditions and markets. These differences can contribute to variations in price movements from city to city. At any point in time, local markets are affected by geographical imbalances in demand and supply. These imbalances result from the fact that the geographical mobility of consumer goods and services and factors of production is constrained to varying extents. The market for shelter services, for instance, is highly susceptible to local conditions, since a house is largely an immobile product. Perishable goods are also subject to local market conditions. Service charges related to recreational activities, local transportation, health and personal care services etc., are heavily influenced by the local state of the market.

VARIATIONS DES PRIX À LA CONSOMMATION DANS LES DIFFÉRENTES VILLES DU CANADA

Outre l'indice d'ensemble pour le Canada, Statistique Canada calcule et publie des indices d'ensemble pour seize villes canadiennes dispersées dans tout le pays. Les utilisateurs se souviendront que les IPC des villes mesurent les variations de prix dans le temps dans certaines villes. Ces mesures n'indiquent pas les différences de niveau de prix entre les villes et, par conséquent, ne peuvent servir à évaluer des différences dans le coût de la vie entre les villes.

Les chiffres du tableau explicatif II indiquent le taux de variation des prix en 1987 pour l'indice d'ensemble et ses composantes principales dans les seize villes pour lesquelles l'IPC est calculé. Le chiffre fourni pour chacun des indices correspondants pour le Canada indique les variations moyennes nationales.

Dans un pays aussi vaste que le Canada, il est inévitable que les conditions économiques et les marchés soient très variés. Ces différences peuvent faire que les prix n'évoluent pas de la même façon d'une ville à l'autre. À tout moment, les marchés locaux reflètent les déséquilibres interrégionaux entre l'offre et la demande. Ces déséquilibres tiennent au fait que la mobilité géographique des biens et services de consommation et des facteurs est, à des degrés divers, limitée. Par exemple, le marché du logement dépend largement de la conjoncture économique régionale (une maison n'est pas un bien meuble). Les biens périssables dépendent également des conditions du marché régional. Les frais de loisirs, les coûts du transport local, les frais de service de soins personnels, etc., sont également étroitement liés aux conditions du marché régional.

The overall state of the local economy is a large factor explaining differences in city price movements. An expanding economy with increasing employment will stimulate demand pressures which may force prices to move upwards. The opposite is likely in a declining local economy. Provincial intervention in the market place in the form of sales and excise tax changes, the introduction or removal of subsidies, or the setting of prices for provincially-controlled monopolies also play a significant role in determining price changes. One example of this influence can be seen by examining the tobacco and alcoholic beverages indexes across the sixteen cities.

The extent of the variation in city price movements by major component group in 1987 may be seen from Text Table III. The range in the movements is determined by taking the difference between the city with the highest rate of increase and the city with the lowest rate of increase. The higher the range, the greater the variability in general. The names of the cities identified with the lowest and highest increases are also listed.

La conjoncture économique régionale est un facteur qui, dans une très large mesure, explique les différences dans les mouvements des prix d'une ville à l'autre. Dans une économie en expansion où l'emploi est à la hausse, la demande sera stimulée, ce qui pourra entraîner une hausse des prix. Il est probable que l'inverse se produise dans une économie en perte de vitesse. L'intervention des provinces sur les marchés, notamment par la modification des taxes sur les ventes ou des taxes d'accise, la création ou l'élimination de subventions ou l'établissement des prix dans les monopoles provinciaux vont aussi jouer un rôle déterminant dans les mouvements des prix. L'indice des produits du tabac et des boissons alcoolisées dans les seize villes illustre bien cet état de chose.

Le tableau explicatif III montre l'importance des variations des prix en 1987, par composante principale, dans les seize villes en 1987. L'étendue des fluctuations des prix est établie en faisant la différence entre le taux d'augmentation dans la ville où la hausse a été la plus grande et le taux d'augmentation dans la ville où la hausse a été la plus basse. Plus l'écart est considérable, plus la variabilité en général est grande. Les noms des villes dans lesquelles le taux d'augmentation ont été le plus bas et le plus élevé sont également indiqués.

TEXT TABLE III. Variation in City CPI Movements - 1987

TABEAU EXPLICATIF III. Variations des mouvements de l'IPC des villes - 1987

	Percentage change in Canada Index Taux de variation pour l'indice pour le Canada	Ranges in percentage Changes City indexes Écarts dans les taux de variation des indices des villes		Range Écart
All-items - Ensemble	4.4	Victoria 2.5	Toronto 5.6	3.1
Food - Aliments	4.4	Thunder Bay 3.1	Saskatoon 6.0	2.9
Housing - Habitation	4.1	Victoria 0.5	Toronto 6.9	6.4
Clothing - Habillement	4.2	Victoria 2.5	Ottawa/Toronto 4.7	2.2
Transportation - Transports	3.6	Saint-John -0.4	Regina -4.8	5.2
Health and Personal Care - Santé et soins personnels	5.0	Victoria 2.2	Saskatoon 17.0	14.8
Recreation, Reading & Education - Loisirs, lecture et formation	5.4	Québec/Vancouver 4.8	Régina 7.1	2.3
Tobacco Products & Alcoholic Beverages - Produits du tabac et boissons alcoolisées	6.7	St-John's 3.5	Edmonton 15.2	11.7

A summary of the extent of differences in price movements across Canada may be gained from the performance of the All-items indexes for cities. Increases in the All-items indexes for cities ranged from 2.5% in Victoria to 5.6% in Toronto. In Victoria, all major component indexes rose at a slower rate than those associated with corresponding Canada indexes. Of particular interest was the significantly lower rate of price change in the Housing index for Victoria (0.5%) compared to the national average increase (4.1%). By contrast, the relatively sharp rate of increase in the All-items index for Toronto was influenced to a considerable extent by significantly sharp increases in the indexes for Housing, Transportation and Clothing.

We turn now to fluctuations in city price movements by major component indexes. Changes in the Health and Personal Care indexes across cities registered the greatest fluctuations in 1987 (See Text Table III). The range varied from increases of 2.2% in Victoria to 17.0% in Saskatoon. The extraordinarily large increase in Saskatoon (also evident in Regina) resulted from a change in the provincial drug plan from one in which the Saskatchewan Government paid for the full cost of prescribed drugs, excluding a regulated dispensing fee, to one in which it reimbursed consumers for expenditures above \$125 per family, with some exceptions.

The sharp increase in the Tobacco Products and Alcoholic Beverages index in Edmonton (as well as in Calgary) was the result of significant tax increases announced in the Alberta budget of March 20. The Housing index rose steeply in Toronto mainly because of an extraordinary 32.6% increase in the price of new houses. Regina's above average increase in Transportation resulted from a 30.8% increase in city bus fares and an 8.9% increase in gasoline prices. This rise in gasoline prices followed a period of active price-wars in the Regina gasoline market in 1986. Ottawa and Toronto registered above-average increases in Clothing prices. Food prices rose the highest in Saskatoon as a result of above-average price advances in several components of food purchased from stores. The above-average increase in Regina's Recreation and Reading Index was traceable to sharp increases in fees and dues for recreational facilities and an increase in Saskatchewan's sales taxes from 5% to 7% in June.

Longer Series

This article was aimed at viewing consumer price movements in terms of annual changes over a period of twelve years. To assist readers interested in analyzing price behaviour over a longer period of time, annual index levels starting at earlier dates are made available. Major component and sub-component indexes starting in 1960 are provided for Canada (see Text Table IV). Annual levels of major component indexes for sixteen urban centres starting in 1971 are also made available (see Text Table V).

Les indices d'ensemble de chacune des seize villes donnent une bonne idée de l'importance des fluctuations des niveaux des prix au Canada. Parmi les seize villes, les hausses de l'indice d'ensemble sont allées de 2.5% à Victoria à 5.6% à Toronto. À Victoria, tous les indices des composantes principales ont progressé plus lentement que les indices correspondants pour le Canada. À noter que la hausse de l'indice de l'habitation à Victoria (0.5%) a été bien inférieure à la hausse de l'indice correspondant pour le Canada (4.1%). En revanche, l'indice d'ensemble à Toronto a affiché une forte augmentation attribuable, dans une large mesure, aux hausses importantes des indices de l'habitation, des transports et de l'habillement.

Si nous considérons les mouvements des prix dans les villes du point de vue des indices des principales composantes, nous constatons que ce sont les soins de santé et les soins personnels qui ont enregistré les plus fortes fluctuations en 1987 (voir tableau explicatif III). L'augmentation de l'indice est allée de 2.2% à Victoria à 17.0% à Saskatoon. La hausse phénoménale de Saskatoon (une hausse semblable a été enregistrée à Regina) est attribuable au fait que le gouvernement de la Saskatchewan, qui remboursait aux habitants de la province le coût total des médicaments prescrits (à l'exclusion des frais d'ordonnance), a imposé, sauf dans certains cas, une franchise de \$125 par famille.

La très forte augmentation de l'indice des produits du tabac et des boissons alcoolisées à Edmonton (une hausse du même ordre a été enregistrée à Calgary) est due aux hausses sensibles des taxes annoncées par le gouvernement de l'Alberta dans son budget du 20 mars. L'indice de l'habitation a affiché une forte augmentation à Toronto en raison surtout de l'augmentation extraordinaire (32.6%) du prix des maisons neuves. À Regina, l'accroissement supérieur à la moyenne de l'indice des transports est attribuable à une hausse de 30.8% des tarifs d'autobus et de 8.9% du prix de l'essence. Cette augmentation du prix de l'essence est survenue à la suite d'une guerre des prix sur le marché de l'essence en 1986. À Ottawa et à Toronto, l'indice de l'habillement a connu une augmentation supérieure à la moyenne. Pour ce qui est de l'indice des aliments, la plus forte hausse a eu lieu à Saskatoon et est attribuable aux augmentations supérieures à la moyenne enregistrées pour plusieurs produits achetés au magasin. La progression supérieure à la moyenne observée à Regina pour l'indice des loisirs, de la lecture et de la formation est due à l'accroissement très marqué des frais et des droits d'adhésion demandés par les établissements récréatifs et à la hausse de la taxe de vente provinciale, de 5% à 7%.

Séries plus longues

Dans le présent article, on a cherché à analyser les mouvements des prix à la consommation en fonction des variations annuelles sur une période de douze ans. Les lecteurs intéressés à analyser le comportement des prix sur une plus longue période peuvent obtenir les niveaux annuels d'indices pour des dates antérieures. Les indices de composantes et sous-composantes principales à partir de 1960 sont disponibles pour le Canada (voir tableau explicatif IV). Les niveaux annuels des indices de composantes principales pour seize centres urbains à partir de 1971 sont également disponibles (voir tableau explicatif V).

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation	8.61	8.25
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.39	5.45

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures**, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, n° 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: **Family Food Expenditure, 1982**, Catalogue 62-554; and **Family Expenditure in Canada, 1982**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-9607).

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: **Dépenses alimentaires des familles au Canada, 1982**, n° 62-554 au catalogue; et **Dépenses des familles au Canada, 1982**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3 \text{ cents}$). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

(1) Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. La durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

City Average Retail Prices - Item Specifications

Detailed Specification

Beef

Round steak. Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

Prime rib roast. Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

Prix de Détail Moyens par Ville - Spécifications des Articles

Spécification détaillée

Boeuf

Bifteck dans la ronde. Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

Rôti de côtes de choix. Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada A ou B, 1 kg.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Rôti de palette (non désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

Boeuf haché régulier. Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boneless Butt**, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, **Boston Butt**, 1 kg.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 g.

Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 450 g.

Poultry

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

Fish

Cod filets. Generally available manufacturers' brands (store brands excluded), frozen, 454 g package.

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 213 g tin.

Dairy Products

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 L.

Milk 2%. Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 L.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 g.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **rôti désossé**, 1 kg.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, **"Boston Butt"**, 1 kg.

Bacon. Marques des fabricants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 g.

Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 450 g.

Volaille

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

Poisson

Filets de morue. Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 g.

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 213 g.

Produits laitiers

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 L (en carton), non consigné.

Lait 2%. Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 L (en carton), non consigné.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1 kg cardboard package, may be pasteurized or vitaminized.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 mL can.

Eggs. Large eggs, Grade A, in a carton of 1 dozen.

Bakery and Cereal Products

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Bread. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

Macaroni. Generally available manufacturers' brands (store brands excluded) dry, tubular shape, straight or elbow (ready-cut) macaroni. May be vitaminized, 500 g package.

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

Fruit

Bananas. First grade, price per kg.

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kg.

Oranges. California, medium size (138 or 113) price per kg.

Orange juice. Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 L.

Lait en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1 kg, peut être pasteurisé ou vitaminé.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 mL.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12.

Céréales et produits de boulangerie

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

Macaroni. Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, droit ou courbé (coupé). Peut-être vitaminé, paquet de 500 g.

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prêtamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

Flocons de maïs. Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 g.

Fruits

Bananes. Première qualité, vendues au kg.

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

Oranges. De Californie, grosseur moyenne (138 ou 113) prix au kg.

Jus d'orange. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 L.

Vegetables

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages price per kg.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

Lettuce. Fresh head, green, good quality, average size head, price per kg.

Mushrooms. Cultivated, fresh, domestic or imported, Canada No. 1, 400 g.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

Potatoes. Table potatoes, white, Canada No. 1, 4.54 kg.

French fried potatoes. Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg poly bag.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 mL.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 mL.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 L.

Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of 2 kg.

Beverages

Coffee, roasted. Generally available manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 227 g.

Légumes

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

Champignons. Cultivés, frais, domestiques ou importés, catégorie Canada n° 1, 400 g.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada n° 1, sac de 4.54 kg.

Pommes de terre frites. Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg en matière plastique.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 mL.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 mL.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 L.

Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

Boissons

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 227 g.

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 72 two-cup paper bags (227 g).

Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 g.

Miscellaneous Groceries

Tomato ketchup. Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 L bottle.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 mL.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 mL.

Peanut butter. Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 g.

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 mL.

Supplies and Personal Care Items

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 L.

Facial tissue. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

Bathroom tissue. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, two ply sheets. Units of four, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 72 sachets de papier pour deux tasses chacun (227 g).

Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

Articles divers d'épicerie

Ketchup aux tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 L.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 mL.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 mL.

Beurre d'arachides. Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crèmeux", 500 g.

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 g.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 mL.

Fournitures et articles de soins personnels

Détergant synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 L.

Papier mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm x 23.9 cm.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, double épaisseur. Paquets de quatre, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 mL.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in one or multiple units (up to four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

Average Retail Prices for Gasoline

Tables 15 through 20 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 21 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 21 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 mL.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en paquet d'un ou plusieurs pains (jusqu'à quatre unités). Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Tabacs

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

Prix de détail moyens de l'essence

Les tableaux 15 à 20 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 21 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 21 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 22 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practices. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 14 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 22 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's	-	Halifax
Charlottetown	-	Halifax
Saint John	-	Halifax
Ottawa	-	Halifax
Toronto	-	Montréal
Ottawa	-	Toronto
Toronto	-	Winnipeg
Regina	-	Winnipeg
Edmonton	-	Winnipeg
Edmonton	-	Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

(1) Voir tableau 14 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Footnotes for Table 22

- (2) The weights shown are rounded 1982 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures (Occasional)**, Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

Notes pour le tableau 22

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982 (hors-série)**, n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

1986 CENSUS PROFILES

LES PROFILS DU RECENSEMENT DE 1986

YOUR TICKET TO ANY COMMUNITY IN CANADA

The 1986 Profiles will put you on the fast track to any Canadian community you want to study . . .

You're looking for a fast introduction to the social and demographic realities of a city, a town, a municipality or an entire province. And you don't have the time to wade through piles of statistics.

Focus in on the area of your choice with a CENSUS PROFILE. Each PROFILE features more than 46 items of information on the area that interests you . . . from population counts, to the living arrangements of its elderly.

Choose a PROFILE on any one of

- 6009 Census Subdivisions (municipalities)
- 266 Census Divisions (counties)
- 282 Federal Electoral Districts
- 25 Census Metropolitan Areas
- 114 Census Agglomerations
- a variety of urban/rural breakdowns
- and, more.

With 52 publications in this series, we can fast track you to any destination you want.

For more information, call us at 1-800-267-6677 and request the Census brochure (which includes ordering information), or write us at:

VOTRE LAISSEZ-PASSER POUR MIEUX CONNAÎTRE LES CANADIENS

Le Canada et ses régions sont à votre portée grâce aux Profils du recensement de 1986.

Vous désirez connaître le portrait socio-démographique d'une province, d'une ville ou d'une municipalité en particulier, mais la perspective d'avoir à vous battre avec des montagnes de statistiques vous effraie?

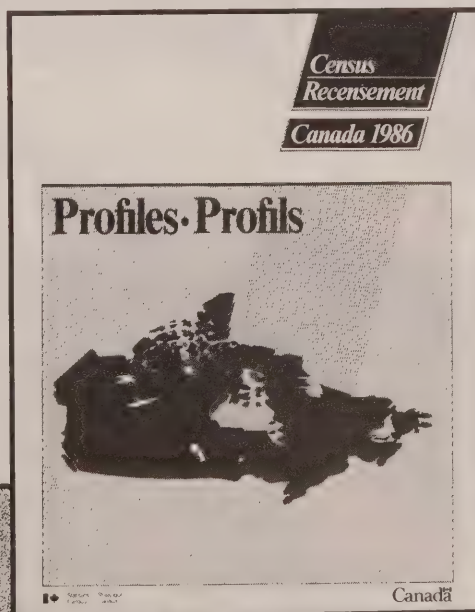

Balayez toute appréhension! Les Profils du recensement de 1986 vous épargneront temps et effort. Chaque Profil présente plus de 46 éléments différents d'information sur chacune des régions répertoriées. Des chiffres de population aux données sur les modes de vie de la population âgée, vous saurez tout.

Vous n'avez qu'à faire votre choix. Et quel choix! Les 52 publications de la série portent sur:

- 6,009 municipalités (subdivisions de recensement);
- 266 comtés (divisions de recensement);
- 282 circonscriptions électorales fédérales;
- 25 régions métropolitaines de recensement;
- 114 agglomérations de recensement;
- diverses régions urbaines et rurales;
- et plus encore . . .

Pour de plus amples renseignements, composez le 1-800-267-6677 et demandez notre brochure, qui vous renseignera sur les modalités de commande. Ou, si vous le préférez, écrivez à:

INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then *Canadian Social Trends* is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, *Canadian Social Trends* looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, *Canadian Social Trends* provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, *Canadian Social Trends* also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE OEUVRE ORIGINALE?

Alors *Tendances sociales canadiennes* est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, *Tendances sociales canadiennes* brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, *Tendances sociales canadiennes* dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

Tendances sociales canadiennes présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

CANADIAN SOCIAL TRENDS

Every week

The numbers that make decisions

The data that highlight national economic trends

Infomat is a digest of the most important statistics of the week. It is invaluable for business planners, policy makers and members of the media who take an interest in the Canadian economy.

Articles cite the most recent economic and social data available, describe current trends and point out significant changes. Regular features include a complete list of publications released by Statistics Canada during the reference week, a table of key economic indicators and a list of upcoming data releases. The text is concise, easy-to-read and complemented by tables and charts.

Infomat, Catalogue No. 11-002E (weekly), is available for \$2.00 per copy/\$100.00 annually (in Canada); \$3.00 per copy/\$150.00 annually (elsewhere).

Toutes les semaines

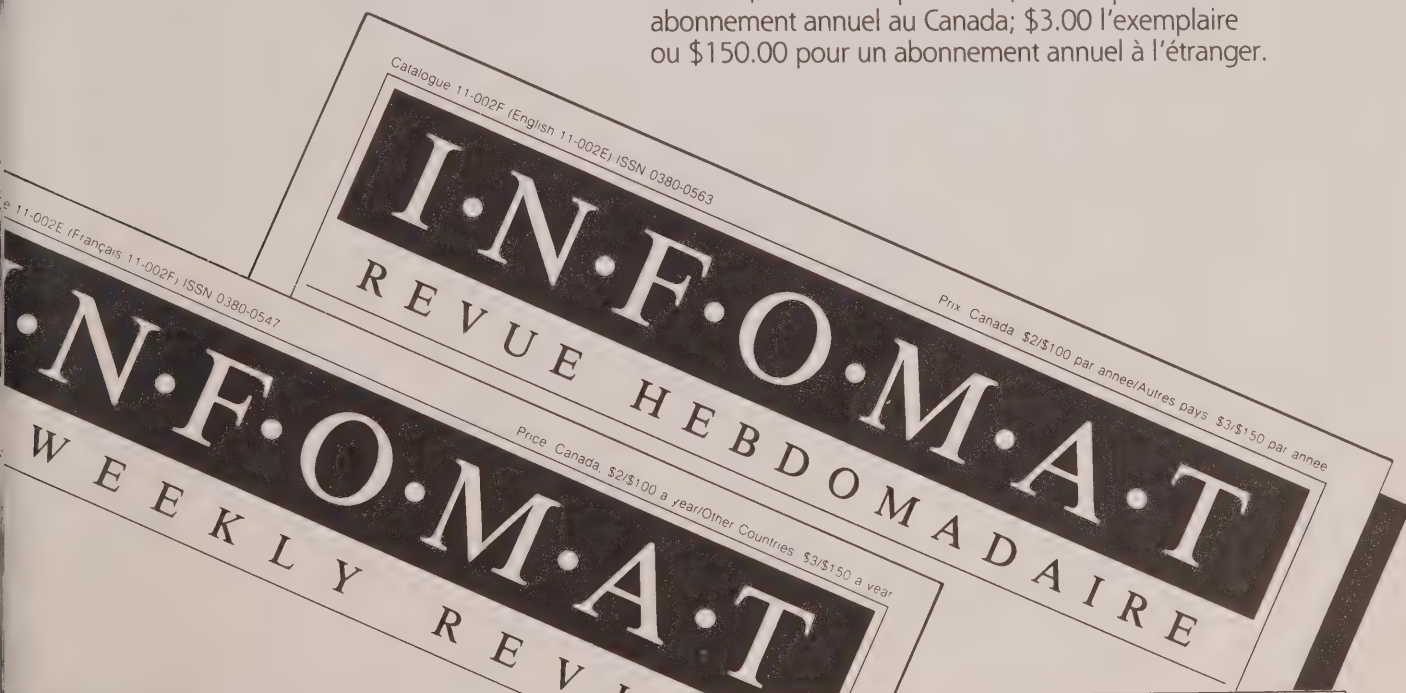

Les chiffres qui font les décisions

Les données illustrant les tendances de l'économie canadienne

Infomat est un résumé des statistiques les plus importantes de la semaine. C'est un outil d'une valeur inestimable pour les planificateurs du monde des affaires, les responsables de l'élaboration des politiques et les médias d'information s'intéressant à l'économie canadienne.

Les articles contenus dans ce bulletin citent les plus récentes données économiques et sociales disponibles, décrivent les tendances actuelles et soulignent les changements les plus significatifs. On y retrouve des chroniques régulières, notamment une liste complète des nouvelles publications parues à Statistique Canada au cours de la semaine de référence, un tableau des principaux indicateurs économiques, ainsi qu'une liste des données à paraître. Le texte est concis, facile à lire et illustré de tableaux et de graphiques.

Infomat, n° 11-002F au catalogue (hebdomadaire), se vend \$2.00 l'exemplaire ou \$100.00 pour un abonnement annuel au Canada; \$3.00 l'exemplaire ou \$150.00 pour un abonnement annuel à l'étranger.

TOUT POUR VOUS! LES DONNÉES ÉCONOMIQUES ET L'ANALYSE QUE VOUS RECHERCHEZ

L'Observateur économique canadien:
Le nouveau bulletin économique mensuel de Statistique Canada

Aucune autre publication ne vous procure autant de renseignements relatifs à l'économie canadienne

Les données du mois

Des données de dernière heure comprenant toutes les séries de statistiques les plus importantes qui ont été diffusées deux semaines avant la date de publication du bulletin.

La situation économique actuelle

Le rendement de l'économie au cours du mois, précis, bref, comportant une analyse de l'emploi, de la production, de la demande et des principaux indicateurs précoces des tendances de l'activité économique.

Des notes techniques et statistiques

Des notes portant sur les nouveaux programmes statistiques, les programmes révisés et sur les progrès en matière de méthodologie propres à Statistique Canada.

Les principaux événements économiques

Des événements internationaux et nationaux influant sur l'économie canadienne, présentés en ordre chronologique.

Des études spéciales

Une recherche approfondie des affaires et des questions d'actualité liées à l'économie.

Un aperçu statistique

Des tableaux, des graphiques et des diagrammes en matière de statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi, des marchés financiers, etc.

ET PLUS ENCORE...

Une analyse régionale

Des ventilations par province d'indicateurs économiques et stratégiques.

Un survol de l'économie internationale

Un sommaire du rendement de l'économie des pays commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.
